French demands for farm policy changes may delay EMS

BY MARGARET VAN HATTEM IN BRUSSELS

The introduction of the European Monetary System on January 1 could be delayed because of determined French efforts to push through changes in the Common Agricultural Policy.

Monetary Compensation Amounts should be phased out by a given date. MCA's are subsidies and levies paid by the Community on intra-EEC trade to offset the fact that German farm prices are 10 per cent above the theoretical common price level as a result of currency fluctuation, and French prices 10 per cent below.

On Monday France quietly reserved its position on introduction of the EMS until the agricultural problems are solved. The changes desired by France would raise farm prices in France and the UK, and cut those in West Germany.

Herr Josef Ertl, German Agricultural Minister, bluntly re-fused to consider the French demand, and was supported by the EEC Commission. The Commission maintains that changes in the monetary system associated with the agricultural trade should only be made during the annual farm price review,

The talks were broken off vesterday morning without the ssue being solved.

France is demanding that CAP and, specifically, the use French electorate and his own to netary Compensation of the new European Currency coalition.

Unit for common farm prices, at their Brussels summit in early December, had instructed their Agriculture Ministers to elear the way for the ECU to tion now than they be used for common pricing after its intradaction.

The opposition of ately upon the introduction of the EMS.

The present yardstick calculating common prices, the unit of account linked to the central rates of the snake (the European joint float, is to be abandoned.

The French resent the size of the subsidies paid to German farmers. Their move to phase out MCAs is an attempt to force lower farm prices on the unwilling Germans, while raising their own. Although the French action appears to have taken other EEC Governments by surprise, it is widely regarded in Brussels as a bluff.

considerable pressure from the French farm lobby. It is also felt that he needs conversions The talks had concerned the on the agricultural front to application of the EMS to the make EMS palatable to the

The German Government is heavily committed to the intro-duction of EMS, so the French appear to believe that they are in a stronger bargaining position now than they would be

Commission and most other EEC governments to the rapid phasing out of LICAs means the French have little chance of getting all they are demanding. It is suggested, however, that they may be prepared to settle for a firm commitment to take some action towards dismantling MCAs in the next farm price

However, any attempt to do this is likely to bring strong governments such as Britain, for whom the elimination of MCAs would be mg a 27 per cent sympathy.

Dispute puts all **BBC TV** off air

ALL BBC television pro rammes were blacked out last night as members of the corporation's biggest union went on strike in a row over the use of freelance filming units.

The Association of Broadcast-

ing Staff called its first major indefinite stoppage in spite of several hours of talks with man-Mr. Tony Hearn, general sec-

retury, said afterwards that there was little prospect of either BBC-1 or BBC-2 programmes being resumed while the deadlock continued, and no talks had been fixed for today.

programmes stopped at 5.45 pm. A BBC announcement was shown, saying that the corporation regretted that no programmes would be transmitted last night because of industrial action by the ABS, and that service would resume as soon as

Earlier, news was read without film after ABS members refused to process a freelance film of the previous night's London to Brighton train crash, The film processors were sus-pended, and the ABS called out the rest of its members in

Frustration

The problem arose out of the technicians' overtime ban im-posed by the union because of frustration at lack of progress over a pay claim.

Because the ban allows only 42 hours of work a week and not more than 12 hours a day, the BBC's staff was not available to film the crash during the The EBC claimed that it was

following normal procedure by using freelances at the scene of a news event. The union in-sisted that it was an attempt to defeat the overtime ban. Trouples over BBC pay have mounted since September when

programmes started to be dis-rupted by overtime bans. Apart from the battle with the BBC over a pay claim, said to be in excess of the Govern-Janata party leaders feel that | ment's 5 per cent limit, frustraancies in pay between the BBC and independent television

Prime rate rise to 11\frac{3}{4}\% likely in U.S.

NEW YORK - Another general increase in the cost of money in the U.S. motion yesterday as Mr. Michael Blumenthal, the Treasury Secretary, said that the economy had been expanding more strongly in the final three strongly in the final three months of the year than expected.

The clearest sign of rising interest rates came from one of New York's largest commercial banks, Chemical Bank, which see it was increasing its prime rate - the rate it charges its best customers - from 11! per cent to 112 per cent. Other bankers said they expected the rise to spread rapidly through

the industry. But there were also suspicions in the money markets that the Federal Reserve Board is again moving more aggressively to try to dampen inflation and support the dollar.

On Tuesday dealers concluded from the Fed's open market operations that the central bank had raised its average target rate in the key federal funds market from about 91 per cent to 10 per cent. Yesterday the again drained reserves from the banking system, with federal funds trading at 91%.

While this move undoubtedly confirms that the Fed's target for the average funds rate is at least 10 per cent, some analysts are confident that the central bank is aiming higher, perhaps at 10; per cent They argue that the central bank is acting firmly partly

Dollar recovers some of its early losses

BY MICHAEL BLANDEN

THE DOLLAR came under further pressure in exchange market dealings yesterday morning following the sharp falls in its value during the first two days of this week:

Later in the day, however, the pressure on the dollar ing ahead of the Christmas holiday it recovered some of its earlier losses.

improvement helped by continued inter-vention to support the dollar by European central banks and later by the U.S. authorities in New York, as well as the upward trend in U.S.

interest rates. The average value of the dollar against other leading currencies, as measured by

the Bank of England index. remained unchanged at 83.1. At this level, the dollar had dropped by nearly 1.7 per cent since Friday as a result of the selling pressure which fol-lowed OPEC's weekend deci-

sion to raise oil prices. The quieter exchange market trading was reflected in the gold market, where after the sharp rises earlier in the week and the successful U.S. gold auction, the price closed in London with a loss of \$\ at \$215; an ounce.

The pound rose in early dealings, touching \$2.0310, but came back later to close in London with a gain of 10 points at \$2.0110. Sterling's trade-weighted index moved up to 63.5 in the morning but closed unchanged at 63.3.

BONN — The West German reached trade union IG-Metall an- So far widen the strike in the country's steel industry, which is now in its fourth week. The union did not specify when or where it would act soon.

The announcement follows the breakdown on Tuesday of mediation efforts by Herr Friedhelm of the state of North Rhine-Westphalia. At the weekend, both employers and trade union menton the key issue-progressive introduction of a 35-hour working week. But draft compromise proposals, involving more holidays and free shifts, were then rejected by the union's key decision-making

Herr Kurt Herb, one of the union's leading negotiators, who announced the planned extension of the strike, said the short time work. employers had only themselves to blame if the strike went on into the Christmas period. A further improvement of the

So far nearly 40,000 workers nounced yesterday it planned to have been on strike since November 28 in the North Rhine-Westphalia, Bremen and Osnabrueck regions. Another 40,000 have been locked out. A would take the step, but said it total of 200,000 are employed in the steel sector in these

The employers have already said that if the strike went on Farthmann the Labour Minister into the New Year then the industry would lose more than DM 500m (£135m). They say that several domestic customers representatives appeared to now looking abroad for steel have moved closer to a settle- are likely to agree long-term contracts—meaning some busi-ness may be lost for good to the West German industry.

Further, several West German vehicle builders have made clear that they will be unable to guarantee full production after mid-January if the strike continues that long. One of these, BMW, said yesterday it had no immediate plans for

Meanwhile, the union is estimated to be paying out about DM 15m a week in strike payone of the factors which preoffer to the union was essential viously suggested an extension if a compromise were to be of the strike was unlikely.

Gaullist party suspends Peyrefitte's membership

PARIS - The Gaullist party giving the party a genuine machine vesterday hit back at M. Alain Peyrefitte, the Justice critics of M. Jacques Chirac, the party leader, by temporarily excluding him from party membership.

Subject to a final decision by the central committee of the in practice being run by a RPR. M. Peyrefitte, the senior group of "four occult political Gaullist minister in the Cabinet and himself a former secretarygeneral of the party, will be suspended from party membership

for six months. The move, adopted by a large majority of the departmental federation of M. Peyrefitte's constituency, marks a dramatic escalation of the internal party row, originally sparked off by M. Chirae's virulent attack on

following a car accident, is going all out to re-establish his authority over criticism of his leadership by the old Gaullist "barons."

political strategy.

The immediate cause for M. Minister and one of the leading Peyrefitte's temporary exclusion Chirac's attack on the President's foreign policies as "excessive" and his accusation that the Gaullist movement was

> M. Chirac took these statements as a personal affront and, judging by various declarations made by the Gaullist parliamentary group and depart-mental federations, he has a great deal more grass roots support than his critics inside

counsellors."

the party.

M. Peyrefitte said after the decision to suspend his party President Giscard d'Estaing's membership, that he was asked foreign and, particularly, his to write a letter of "excuses European policies, and mortification" retracting his M. Chirac, still in hospital criticisms of M. Chirac. "I burst out laughing and said that this was out of the question."

re-establish his authority over the said he had never in-the party, which has been tended to insult M. Chirac. His undermined by the sharp letter to Gaullist Members of merely to remind them of one The latter consider that of the fundamental principles M. Chirac is more interested in which General de Gaulle had feathering his own nest, in bequeathed the party, namely anticipation of the next presi-respect for the institutions of dential election in 1981, than in the Fifth Republic.

Union rivalry hits strike

PARIS - Policy differences between France's two main union groups threaten the effectiveness of the national demonstration which the Communist-led CGT has called for today. The rival CFDT has refused

to support the strike call, which was provoked by the Government's recently - announced higher social security provisions, and by redundancies which already have led to bitter demonstrations in the steelmaking areas of eastern France. The action was further weakened by the CGT's decision not to call out workers in the public electricity service on the grounds that consumers suffered enough from Tuesday's involuntary four-hour power

The strike's main effects are likely to be felt on the railways. in the postal services and in the daily newspaper industry, which is expected to be shut com-

Construction, armaments and engineering companies will also be affected with disputes lasting Renault) to 24 hours.

The handling of the demonstration has highlighted the rift between the CGT and CFDT. Rather than support the strike, which it has dismissed as "unrealistic," the CFDT has been urging its workers to seek higher wages to compensate for tions and to take local action against redundancies.

IG-Metall plans Italy facing confrontation over pay

ROME - The Italian Govern- for higher growth. ment and the trade unions appear set for a confrontation over the imminent renewal of a series of national three-year labour contracts involving some 10m workers in both the public and private sectors. At the southern city of Bari,

1,400 delegates of the key Eugineering and Metalworkers Union (FLM) are currenly finalising their platform, which has traditionally set the broad pattern of wages in Italy. Their demands include a greater say in future investment policies, a shorter working week, and wage increases averaging some L30,000 (£18) a month for the next three years.

These demands, according to Sig. Filippo Maria Pandolfi, the Treasury Minister, are incomnatible with the Government's aim of reducing inflation through a medium-term economic programme to enable the lira to remain inside the new European Monetary System

(EMS) while laying the base

closing gap

BRUSSELS-The EEC and

agreements before the end of Barcelona. agreements before the entropion of this mouth, while employers are refusing to open segetiations until a new political and economic package is agreed with the Government and

This would replace the Moneton Pact guidelines, agreed in October 1977, and day to expire at the end of the year. The wage celling established by the Moneloa Pact was 22 per cent and the pay claims one for reaegotiation would technically fall within that limit in the absence of new child.

in the absence of new guidelines
The Government, however, envisages wage increases for next year of no more than 12-13 per cent, while nego-tiations on a new social con-tract between unions and employers have collapsed, with little prospect of agreement before next year, onetheless, the unions have decided to press shead with the new collective bargaining. agreements, and the SEAT works council has set the mace with a blaim of 17 per cent which in the anism's view, would just cover this year's likely rate of inflation.

for the creation of Svenska Varv. the state shipbuilding company Mass assemblies

The unions which control Barcelona's industrial belt principally the Communist-led Workers Commission— have begun a phased cam-paign of action which was inaugurated with mass assemblies in the Red Square alongside SEAT's main Bercelone plant his is due to be followed by

24-hour strikes after Christmas and early in the New Year, and it necessary, minm leaders say, by strikes of indefinite duration.

The campaign has drawn in most of Barcelona's large engineering companies.

engineering companies, in-cluding Motor Iberica, Pegasa, Hispano Olivetti, and Harry Markel sectors which will be affected are the car industry, banking, raikways and communications. and the capital goods and electronics industries. similar dileuma last year,

before the signing of the Moncios Pact, was solved by inserting a retroactivity clause. In other words, wage agreements under negotiation. before the package was agreed were made retrospectively subject to the 22 per cent guidelina

Phis caused friction, but less than it might have done since higher settlements went through under the cover of productivity bonuses, or by subtracting employers' social security contributions from the overall sum on which increases were calculated, thus enabling a higher cash settle-

ment.
Employers are determined not They argue that wage claims last year outstripped the growth in the money supply by at least 5 per cent. As a result, they say, money in circulation has increased by around 20 per cent in the 12 months since the Mondon Pact was signed, while credits to industry are up by only 10

per cent. They are going along with the Gevernment's ettempt to reverse the situation this year — by a wage ceiling of 12-13 per cent and limitation of the money supply to around 15 per tent — and will resist union aftempts to push through higher settle-ments before this package is

Wide disruption The prospects are not bright on either side. If the unions on either side. If the onions press for immediate, negotiation of the pending wage agreements, and employers refuse to open negotiations until the unions agree to the Government's suggested guidelines, there is a strong possibility that this widespread industrial disconting.

through the Government's economic and monetaly policy for next year will not get off the drawing board.

Dutch bribes claim

Papers slieging that a senior Dutch airline official took bribes from McDonnell Douglas, the U.S. sircraft manufacturer, have been sent to the Amsterdam Public Prosecutor by the Minis try of Transport, writes Charles Batchelor in Amsterdam. The unnamed official is alleged to have received \$200,000 in 1969-

Herr Walter Scheel has criticised bluntly his countrymen's attitude to unpopular views, writes Jonathan Carr from Bonn.

West Germany given a lecture in democracy

WEST GERMANS have just received a tough lecture from an unexpected source about the defects of their democracy. They have been told that too few of them are ready to defend unpopular positions, that they are too rarely prepared to examine the differing opinions of others, and that the most important concrete issues facing the nation are eing handled ever less by Par-

On the contrary, according to this criticism, the main argu-ments occur with—rather than within-Parliament and other state bodies. When the discussion becomes lough, the state organs retreat from the fray noting that they alone have the constitutional competence to decide on the matters in dispute. Many West Germans have be-

come quite used to hearing freedom. criticism of their democracy both from abroad and from a minority at home whose confessed aim is to install another system, by force if necessary. But the new strictures come from none other than the Federal President, Herr Walter School, who is now dearing the end of his first-and possrbly only-term as head of state. During almost five years of office, Herr School has become renowned for speaking out bluntly on controversial issues—not always to the liking of the Social Democrat-Liberal coalition Government in Bonn, of which he ased to be a member.

But rarely has be been so —goes far to support the case had announced a change of tacforthright as in his speech last he made.

This in turn brought an entirely between two camps—
tics and said they planned to increasing sense of outrage, one insisting that those who

Herr Scheel said that Germans managed to turn discussion of every problem, however small, into an argument over principles which, of course, neither side would relinquish.

Thus the arguments led ever further away from solutions. The people, he declared, were bored months-long discussions in Parliament over which party was more opposed to terrorism or which most supported

The English had successfully maintained the traditions of the monarchy but filled them with democratic content. "We fight so long and hard for the outward forms of democracy that we hardly have time and energy left for democratic content," Herr Scheel said. There were those who heard Herr Scheel who felt he was being somewhat too negative about German democracy. But the public disputes over two issues mentioned by Herr Scheel -the "decree on radicals," and.

evacuation of equipment.

Mr. Ezer Welzman, the
Defence Minister, ordered the withdrawal to stop two days ago, after Israel had rejected Egypt's new proposals for over-coming the crisis in the talks. But the Army is continuing to construct bases behind the proposed interim withdrawal line in the Sinal peninsula, as well as behind the international border to which Israel pledged withdraw three years after

signing a peace treaty.

Israel started these projects before a peace agreement was signed to ease the pressure on its Transport Command when the withdrawal moved into top

Mr. Moshe Dayan, the Foreign Minister, was due to leave for Brussels today to meet Common Market Ministers. He plans to explain Israel's reasons for rejecting Egypt's proposals, as well as to seek preferential terms for exports of Israeli produce to the EEC.

Problems delay Egyptian budget

CATRO — The difficulties being experienced by the Egyp-tian Government in drawing up the budget for 1979 surfaced yesterday with the announce-ment that the final draft would not be published until well into

Following talks between President Anwar Sadat, Prime Minister Mustapha Rhalil and senior economic ministers, it was stated that the 1978 budgetary period was being extended for another month in order to provide time for a series of essentially poli-tical consultations.

The Government's task has been complicated by what is understood to be a significant increase in the forecast budget deficit for this year, underspending by some \$600m on investment projects, and by the need to keep within the fiscal ceilings agreed with the IMF. At the same time the Government is pledged to undertake the first measures in a threeyear programme of structural reform which includes final action to unify the country's domestic interest rates more in implementing structure into line with international reforms and checking the con-

is due to increase interest rates by another 1 per cent, making the central bank discount rate 9 per cent and the rate charged by the commercial banks 10-11 per cent. Savings and time deposits will be increased to

8 per cent.

However, the immediate task for the Government is to control the growth of current expenditure and particularly the bank-financed element of the budget deficit. During a series of meetings over the past few days ministers have been concentrating on a politically sensitive area of subsidies which take a substantial part of the budget, methods of improving the efficiency of the vast public sector, measures to check the widespread tax evasion, areas in which revenue could be increased viz direct taxes, the servicing of external debt and ways of increasing domestic savings.

Although the list is very familiar, there are some indications that the Government is two-tier exchange rate and bring sware that any further dalay summer boom could soon begin, including that of investment.

On January 1 the Government to have damaging effect on the country's improved external payments situation. Mr. Sadat has decided that he will chair a special meeting of the parlia-mentary members of the National Democratic Party in order to discuss "basic issues and a fixed policy for economic stabilization" stabilisation

As a result there will not be a budget statement to Parliament until perhaps the middle of January, and this could be further delayed if during dis-cussions of specialist committees there is serious political concern over the possible impact of proposed measures. Any changes to Egypt's highly complex pricing system is bound to be seen as inflationary by some sections of the public

There are no precise figures for inflation, but it is often put at between 20 and 35 per cent and varies considerably between

different income groups. President Sadat left Cairo yesterday for another of his regional tours during which he is concentrating on building up public support and explaining to local governors his plan for giving them greater powers of decision in a number or areas,

Sometimes only family names are given, it says, and so it is asking the individuals named to come forward to assist its in-

> More recently another list has sterted circulating claiming to name individuals transferring money abroad despite newly imposed foreign exchange controls. Both lists are seen as reflections of leading Iranian's lack of confidence in their future if anti-Shah demonstrations continue and no alternative Government emerges.

A further underground document concerning the Phahlavi Foundation, the trust fund controlled by the Shah, has been officially challenged. The docu-ment: alleged that favoured students sent abroad for studies had been handed out \$1,200 per month as living expenses. Yesterday the radio said that no student had received more than 8300 per month above the

Meanwhile, Dr. Gholam Hossein Sadiqi, the veteran poli-tician from the 1950s believed to be prepared to become Prime Minister, yesterday contimued to search for potential members of a Cabinet to re-place that led by General Azhari.

However, the National Front leader, Dr. Sanjabi, whose poll-tical weight would be useful in a new Administration, is believed to have written to Dr. Sadiqi warning him against forming a government at this

stage.

A basic demand of the opposition leaders who are prepared to meet the Shah halfway is said to be control of the Army, the police, the secret police and the budget. Negotiations on the zew Cabinet are not expected to be concluded for a week or

Freighters back in

BEIRUT-The port of Beirut, vital for the Lebanese economy, has resumed partial activity after five months closure. Five freighters have unloaded goods for Lebanese merchants and more are expected to arrive within the next few days.

The reopening of the harbour,

once the busiest in the Arabit, once the busiest in the Arab world, follows new security measures and the removal of gunmen from this area of the capital. The poort is controlled by Christian militias but borders on an area held by their adversaries. the Syrian troops of the Arab

peacekeeping force.

The closure of the harbour had contributed to a sharp rise in imports and increased snuggling. During the fighting last September ships had to unload in Cyprus and Piraeus at a heavy cost for for Lebanese importers.

Some docked at the Lebanese

ports of Sidon in the south and Tripoli in the north, but mer-chants were rejuctant to depend on these outlets because of unstable security. For five months, many of

Lebanon's needs were imported via the Sytian Mediterranean port of Lattakia, and then brought to Lebanon overland by truck. The extra cost has contributed to an inflation rate of 20 per cent during the period. Urgent requirements are imported by air. The latest item is Christmas trees, which have been flown from Austria. The smallest tree now sells here at Lebanese £100 (nearly £17). The same kind of tree cost about £5 sterling last year.

Rhodesia counts cost of six-year guerrilla war

BY TONY HAWKINS

SALISBURY - More 12,000 people have died inside Rhodesia in the guerrilla war which started exactly six years ago today.
Official casualty figures pro-

vided by the Rhodesian Government show that during 1978 5,320 people lost their lives in the war-more than 44 per cent of the total number of casualties incurred since hostilities started in 1972 with a guerrilla raid on an isolated farmhouse in North East Rhodesia. In 1973 less than 300 people died in the war, whereas this year the monthly average has been 445.

This year too, the guerrillas achieved their three most publiised attacks. These were the brutal murder of 13 white missionaries and their families at Elim mission near Umtali in eastern Rhodesia, the shooting massacre of injured survivors, and last week's daring attack on

the Salisbury oil storage depot. In a statement to Parliament yesterday. Mr. David Smith, the Finance Minister, declined to is estimated at more than £10m. zBut he told MPs that lessons had been learned from the fire which would be put to good use. The minister said that some estimates of the cost of the fire that were being mentioned were "absurdly high." A useful amount of fuel would be recovered from the 28 burnt-out tanks. He said many other incidents during the war had been as costly in foreign exchange terms although not so spectacu-

Official casualty figures for the war show that the guerrillas have lost 6,150 men in the fighting inside Rhodesia, of whom 2,459 died during 1978. This excludes guerrilla casualties in trans-border raids put at more than 3.000, as well as the 1,340 guerrillas recruits and "col-laborators" killed in hostilities.

3.484 (1.877 this year) while there have been 294 white civilian casualties (173 in 1978). The Rhodesian security forces have lost a total of 774 men in about to be granted indepenthe war so far (282 this year) to give a guerrilla/security force kill ratio of eight to one in the time that his people would six year war and of nearly nine rather be rid of all colonial

essential, Canadian MPs told

By Victor Mackie

OTTAWA — Mr. Pierre Trudcau, the Canadian Prime Minister, told the Commons vesterday that workers' wages were not keeping up with inflation, but urged Canadians to exercise restraint so that his Government would not have to re-impose wage and price controls.

His comments came after the Opposition attacked the Government over continued increases in the cost of living. Statistics issued this week showed that the annual rate of inflation had climbed to

S.8 per cent in November.

Earlier In the day the privately - sponsored Conprivately - sponsored ference Board in Canada issued a forecast that the economy, battered by depressing influences would register a growth of only 3.3 per cent. down from a forecast made two months ago.

The expected slowdown of the U.S. economy next year would have a major impact on Canada. The expansionary offect of the November Budget offset the impact of spending cuts announced by Mr. Trudeau in August, and the effect on prices of a sales tax reduction offset the inflationary effects of the Canadian dollar, said the board.

The result would be growth in real GNP of 3.4 per cent in 1979, the Board said. Inflation was expected to be 7.8 per cent, and unemployment 8.8 per cent.
The pattern of growth next

year would be different from that of 1977 and 1978, the forecast said. For those years the domestic economy as measured by the growth in real final domestic demand was weak.

The external sector would provide only a small contribution to growth in 1979, said the board. The domestic sector. led by business invest-ment in machinery, equipment and consumption, would provide the only significant source of growth.
The board said: "While we

are confident about our assessment of the outlook for 1979, the Canadian economy is on a knife-edge as far as 1980 is concerned. If there is an acceleration in wages of the nature we forecast, with consequent acceleration of prices in 1980-31, the competitive advantage gained by depreciation of the dollar will be eroded."

ore a graphic illustration of

Paulo Salim Maluf, who is to become governor of Sao Paulo next March, is offering an origi-nal remedy for these ills: move

the state capital into the interior where a fresh start can be made.

Maluf says that, by 1983 when he leaves office, he will have set up an attractive new administra-

dive state capital at an estimated ; pst of £100m.

His announcement has pro-

roked a flurry of critical retorts.

The present city mayor, Olavo Setubal, replied firmly: "There is no economic, social or geo-political justification for moving

he capital." Ex-banker Laudo Nutel, who was all set to become

governor for the second time pefore Moluf's surprise victory it the Arena party convention in June, quipped: "We need to take

apital investment, not the capi-al city, into the interior."

The strongest denunciation, nowever, came from the ex-perienced urban planner, Jorge

Wilheim, who is present state ecretary for planning, who ounter-attacked: "The plan is liabolical in the original mean-

ng of the word. It is a seductive

emptation, leading to damna-

ion." Apart from slating the proposal in urbanistic terms, he

cas also referring to alleged

uicy electoral pay-offs that

Maluf is reaping in the interior,

with his promises of an immense

lections, the proposal has pro-ided a considerable fillip. When

uestioned about the dubious nature of this electoral nanocuvre, Maluf grinned back

ke a mischievous schoolboy.

these woes.

URBAN PLANNING IN BRAZIL

THE PROBLEMS affecting many 20 years of political life left in

Pay restraint | Blumenthal sees strong growth in fourth quarter

economy grew at an annual rate Administration, if that in itself a U.S. inflation rate of more of 2.5 per cent in the third helps curb inflation and than 7 per cent bears on the quarter of 1978, less than America's propensity for large Carter Administration's prooriginally estimated by the Com-volumes of imports, particumerce Department.

But Mr. Michael Blumenthal. the Treasury Secretary, reacted quickly to the revised thirdquarter gross national product figures issued yesterday by the Commerce Department, saying: 'We expect a very strong fourth quarter." He said real growth in the last three months of this year would be 4.5 per cent or more, at an annual rate.
The Treasury Secretary

scoffed at private economists' predictions that the U.S. faces recession next year. U.S. erratic this year. Freezing weather and a national coal strike led to a slight decline in GNP in the first quarter. it rebounded at an annual growth rate of 8.7 per cent. However, a slowdown in growth next year will not be

WASHINGTON - The U.S. totally unwelcome to the U.S. larly of oil.

Mr. Blumenthal also made the first public concession by the Administration that inflation next year would be of the order of seven per cent or more. In announcing the anti-inflation programme in October, the Administration had set its sights on bringing price rises next year down to an annual 6-6.5 per cent.

Inflation, according to the figures released yesterday by the Commerce Department, was growth has been unusually 6.9 per cent at an annual rate in the third quarter. Mr. Blumenthal said his new estimate was based on OPEC's decision to raise the price of while between April and June. oil next year by 14.5 per cent, which according to government estimates, will add a half percentage point to

The political consequence of posal to offer a tax rebate to workers who settle within the 7 per cent wage guideline next year. It now seems that money for this so-called "real wage in-surance scheme," which needs Congressional approval, will have to be included in next year's budget. President Carter is making the final decisions this week on the 1979-80 budget. which he will present to Congress next month. Money for the tax rebate will presumably

programmes. In addition to revising real GNP growth in the third quarter down from 3.4 per cent to 2.6 per cent, the Commerce Department also revised its estimate of after-tax corporate profits in the same period, to show a 1.1 per cent decline, compared to the original estimate of a 1.2 per cent rise.

BRAZIL

Brasilia

Maluf, who is the son of Leba

nese immigrant parents, has had an astonishingly rapid and lucra-tive career. Part of his fortune comes from his involvement in

what has become known as the "Luifalla scandal" in which a

small textile firm obtained extraordinarily large government loans before shutting its doors

in what many suspect was fraudulent bankruptcy.

After a prolonged public outcry, particularly vehement as very high government officials were alleged to be involved, the Government started an inquiry which culminated inconclusively.

which culminated inconclusively earlier this year with the con-fiscation of the assets of the Lutfalla group. With elections now imminent, the investigations

have ground to a standstill.

Traditional Brazilian business-

men, feeling great repugnance

for Maluf's openly amoral atti-

tude towards business and poli-

tics, have not been slow to point

out that Maluf could never have

reached a comparable position

Paradoxically, Maluf's success

in the party convention was partly the result of the present climate of rebellion in which the

hold that the traditional banking

elite exercises over the state-

and national-governments is

onimenting: "Only the quick-charismatic outsider as its candone nothing except impose itled get on in politics. And didate, rather than the staid trivial fines, which in any case in an ambitious man for the conformist that the Government the landowner often passes on

Swiss study Citibank's Zurich office

ZURICH - The National Bank is studying the report drawn up for Citibank on the New York bank's European money-trading activities. A National Bank spokesman said yesterday that interest is concentrated on the operations of the Zurick branch, particularly in the light of Swiss currency protection measures and the good-conduct declaration given by

all foreign banks working in

By John Wicks

At the same time, the Swiss federal tax administration in Berne has disclosed that it is "interested" in the Citibank case, while investigations are also being carried out by the Zurich cantonal tax authorities. It is understood that the Swiss Banking Commission is also considering allegations of improper transfers for tax

avoidance purposes. The Citibank management in Zurich would not comment, but it seems likely that the possible back taxes which the New York headquarters confirmed were the subject of negotiations in Switzerland include cantonal Income tax, federal defence tax and possibly also negative-interest commission.

and trickery against the landlords.
Olavo Setubal claims in desperate fashion that the council's hands are tied until it is endowed with adequate legal

powers. Earlier this year, a São Paulo Arena senator, Otto

Lehman, tried to push through Congress a new law that would give the city council power to

imprison landowners setting up illegal estates and would allow

tenants to withhold monthly payments until the estate was

legalized. Lehman's failure to

obtain a majority for his law is an eloquent reflection of the continued strength of the land-owner class among Brazil's

political parties today.
The city council has also been

pushing unsuccessfully for a new progressive tax on unoccupied

plots of land within the city's boundaries and for a capital gains tax on profits from the sale

of unoccupied urban plots. It is remarkable that neither tax yet exists. In this way, councillors believe that they could curb the

unbridled land speculation that

has taken place with astute land

owners leaving part of their land

unoccupied so that it will shoot

up in value with the eventual expansion of a basic urban infra-structure to these areas. Urban

land prices in the state of Sao

Paulo rocketed by a startling 1.410 per cent from 1969 to 1976.

These large empty areas, of in-

calculable social value in a city struggling to absorb 500,000 new

was pushing on them. Such an to the families purchasing the act of defiance would have been plot of land. The city has unthinkable four years ago. expanded in disorderly and Yet it is doubtful whether chaotic fashion with the shame-

proposal will solve any prob-lems, except improving Arena's electoral chances. Many urban planners are seriously concerned that it will entail a heavy outlay of scarce resources that could be better used to tackle existing selves have built, will hear

better used to tackle existing selves have built, will hear problems, for, with or without denunciations of double-dealing "Malufopolis," Greater Sao Paulo and trickery against the with its 11m inhabitants will landlords.

Maluf's glmmicky, vote-catching less exploitation of proposal will solve any prob-migrant families by

continue to exist.

Gradually some of the city's

problems are being faced. A colossal project, Sanegran, which

involves an investment of £450m

during its first stage upto 1983, is to put in 5,400 kms of drains by then, benefitting half a million residences. At present, only 40 per cent of the popula-jion of Greater Sap Paulo is on a central sewerage system. The

a central sewerage system. The

project also entails the construc-

tion of various sewage treatment stations. Today just 1.5 per cent of sewage is processed, while the rest is discharged, untreated,

into the foul-smelling Pinheiros and Tiete rivers, which have to

be constantly dredged so that they do not clog up. The rivers flow into Billings reservoir, feed-ing Cubatao hydroelectric power

station, where the waters have to be sprayed to kill the

unhearable stench.
Another huge project, Planasa,

is increasing the supply of piped water. Now 87 per cent of the

water. Now 87 per cent of the population is on a central water system, compared with 60 per cent in 1975. This improvement has been reflected in infant mortality rates, which, after increasing rapidly since 1962, are now finally falling. The present rate of 70 deaths per 1.000 live births is still extremely high.

After a ten year delay, during which time the problem aggra-

vated to a crtical level, pollution

control is now finally tightening. Multinational companies, in-cluding Hoechst, Rhone-Poulenc,

Caterpillar and Perkins, have

had new projects turned down

by Cetesh, the state's agency for

environmental protection. And fines will soon begin to really

However, there is one highly

crtical aspect of urban develop-ment that is still not being

tackled by the authorities: land speculation. No less than half

of São Paulo's housing estates were set up illegally, with

Britain wins on textile policy

By Giles Merritt

BRUSSELS - The European Commission is to take a tougher line in its negotiations with Mediterranean textile producers on 1979 levels of trade following a determined stand by Britain in the EEC Conneil of Ministers.

In a bid to ensure stronger enforcement of new and more acceptable levels of textile imports into the EEC. Britain had initially blocked the Commission's negotiations with the eight Mediterranean countries concerned.

This would have meant that from January 1 the EEC flood-gates would technically have been opened for uncontrolled sales of textile products from Portugal, Spain, Greece, Cyprus, Malta, Turkey, Morocco and Tunisia. It would have been a highly sensitive political situation, for these countries have either associate or preferential status with the Common Market.

But last-minute negotiations between the UK and the Brussels Commission, which is the body that must negotiate the new voluntary textile agreements, have resulted in a British Government decision to lift its reserve at this morning's energy council

The official British decision to accept a series of assurances from the Commission was, however, taken only after protracted discussion between UK accord with Austria as "a major officials in Brussels and Mr. element in our negotiations John Smith, the Trade Secre- with developed countries." tary, who had returned to London.

The EC Commission is known to have virtually completed its negotiations with Spain, Greece and Morocco, while those with Portugal, Cyprus and Tunisia are due to be completed between Christmes and the New

Britain is understood to have received firm assurances from EEC Trade Commissioner Herr Wilhelm Haferkamp, that Portuguese textile imports will n future be spread more evenly throughout the Nine. At present Portugal accounts for about £100m of the £160m Mediterranean textile sales to the EEC. and Britain receives about two thirds of Portugal's sales.

The new textile deals are also

expected to reflect British conrern for stricter procedures and warning bell machanisms "warning bell" machanisms that show a trade ceiling is being exceeded.

On the question of Malta where Britain has already imposed safeguards to halt textile imports, EEC officials suggest that no date for new negotiations is in sight.

German-USSR chemical plant

BERLIN -- The Berliner Chemicanlagenbau, a joint subsidiary of Uhde in Dortmund and the City of West Berlin has signed a contract here with Techmaschimport of Moscow to construct a petrochemical plant in the Soviet Union worth slightly over DM 50m (£14m). The plant is to produce inter-mediate products with the know-how to be provided by Hüls. Engineering and equipment are to be provided by West Berlin companies to the largest degree possible while the Soviets will do the construction and assembly operation themselves.

Kawasaki wins Iraq order

TOKYO — Kawasaki Steel announced yesterday it had re-ceived an order for 100,000 tons of oil pipes from Iraq's national petroleum planning corpora-

tion. A Kawasaki spokesman said delivery of the pipes, valued at about \$40m, would begin early next year and be completed by December.

Iraq will use the pipes to transport oil from oilfields to pumping stations; according to the spokesman. Kawasaki won the order in an international bidding held last September. Giant Japanese steel makers Nippon, Nippon Kokan K. K. and Sumitomo Metal partici-

pated. Industry officials noted that the four steel producers usually join forces to win an international order and that it is unusual that one of them alone received such a large order. The four won an order from China for 250.000 metric tons of seamless steel pipes earlier this month. AP-DJ

The UK says level of the proposed threshold its concern is that the move above which many public confight set a precedent for other tracts should have to be offered semi-lindependent public bodies to firms iff other countries. The British Post Office is much EEC and the US have reached less closely controlled by the provisional agreement on a level Government than postal services of 150,000 special drawing in the other EEC countries.

Instead of including the Post formications Post Office con- tracts for defence purchases to

UK export performance falls

FRANKFURT — The growth rate of British exports to West Germany slowed dramatically during the first 10 months of this year. At the same time, official West German statistics show that, despite substantial purchases of North Sea oil, the Federal Republic's exports in Britain went up at a faster rate than the UK's sales in the Federal Republic.

Figures researched by the British Embassy in Bonn from returns produced by the Federal Statistical Office in Wiesbaden, show that British exports to West Germany during the first 10 reporths totalled DM9.83bn (£2.66bn)-15.1 per cent up on the comparable figure for 1977, but under the 18 per cent growth rate recorded for last

year as a whole.

reverse the trend noted last year and the year before, but the German poperation of the British market continues apace. while the UK's penetration of the market here is flagging.
At the end of October, WestGermany held 5.92 per cent-of

the British imported goods market. This compares with 5.31 per cent at the same point in 1977. Britain, on the other hand, held some 4.9 per cent of West Germany's imports mar-North Sea oil continues to be export expansion with the indicate.

In contrast, West German ex- Federal Republic. ports to the UK rose by 16.2 exports went up by only 12.3 per cent to DM13.85bn per cent to DM 8.77bn compared (23.74bn). Not only does this with DM 7.85bn in the first 10. months of 1977. Naturally, the trade surplus

in West Germany's Javourwhich grew even when British exports were expanding faster than those of the Federal Republic to the UK — has expanded substantially. In the first 10 months of the year it went up from DM 3.3850 during the comparable period of 1977 to DM 4.02bn.
Admittedly, British trade

Ret at the end of October against 48 per cent a year previously.

What is even more worrying Deutschemarks, show British North Sea oil continuer. North Sea oil continues to be ing at a faster rate than the providing the main impetus for Federal Republic's statistics

sented 35.3 per cent of produc-tion, and was only 58 per cent. British taxpayer will be pleased of the 772,000 cars exported in the figures set the scene in realities." Ford was likely to finish the Mr. Lacey also discussed rose by between 5 and 7 per year with about 24.9 per cent of car prices, a subject in which the UK market, and BL with Glass's has much expertise, dealers achieving 10 per cent.

"This is a most significant factor, since it was the frightening escalation of he new-used price gap over the last few years that was one of the biggest deterrents to fleet renewal." After annual rises of between 20 and 25 per cent in the three years to last year, the new car price of an average 1300 cc model had risen by only 12 per

cent this year.

Meanwhile, second-hand car well. A typical two-year-old 1300 cc model with around 24,000 on the clock was likely to be selling for about £1,800 next March. This was about 59 cent of the original price of £3,025 in March, 1977. Glass's research suggested

that retail sales of used cars rose by between 5 and 7 per cent this year, with more active

Hodge Group given consumer credit licence approval

BY JOHN BRENNAN

THE NATIONAL Enterprise TWO YEARS of doubt over the Board is to move into the twofuture of the Hodge Group con-sumer finance business was ended yesterday when Mr. way radio business. It is to invest £510,000 in the loss-making Burndept Electronics — a sub-sidiary of the Beree Group, which runs the Ever Ready Gordon Borrie, Director General of Fair Trading, accepted its applications for consumer credit licences.

The NEB is to acquire a 51 per cent stake in Burndept, which makes two-way radio equipment used by most UK The Hodge companies, part of Sir Julian Hodge's financial empire bought by Standard Chartered Bank for \$42m in police forces, and other indus-trial and commercial customers. 1974, were warned in August In the past six years, Burnthat Mr. Borrie was "minded to refuse" their Consumer Credit licences. dept has incurred losses totalling fim. Berec is to retain a 49 per cent stake in the busi-

Only 17 of the 82,000 applica ness, which it feels will benefit from the NEB's experience in tions received by the Office have been refused to date. But such a refusal would have forced Julian S. Hodge and Hodge Finance to stop arranging personal loans through their 100 High Street offices. And it would have made a significant deat in the Hodge bulbe. It is the NEB's long-term policy to take strategic stakes in the electronics field but, until recently, these have largely been in companies making rom-puter-related products and cant dent in the Hodge subsidiarles £5m profits contribution to Standard Chartered. Berac says it wishes to con-

centrate on its main business. Mr. Borrie said yesterday that of manufacturing Ever Ready he was taking "an exceptional course and making a statement " dry cell batteries. It plans to spend between on his decision. This is the first time the director general £35m and £40m over the next two to three years, mostly endeveloping its battery business. Cash raised from the Burndept blichy commented on any disposal would assist this expan-

Earlier this year Berec sold its C. M. Churchouse lighting and communications concern to Crompton Parkinson—a sub-sidiary of Hawker SiddeleyChartered Bank took control of the Hodge companies." Control exercised by the bank has "become increasingly effective during the past three years."

Mr. Borrie also considered the point that the business of Julian Hodge is to be transferred to its parent bank "as soon as possible" and the fact that "considerable changes had taken place in the boards of the Hodge Group."

Sir Julian Hodge, 74, and ten fellow directors stepped down from the Boards of Hodge Group companies in October.

Hodge Group's chequered past performance in the second mortgage business is believed to have been a major stumbling block in its application for a licence. Mr. Borrie notes that his decision was influenced by Standard Chartered's move to end all

character's move to end all second-mortgage lending.

He said "It is expected that existing agreements of this type would come to an end by 1982."

Other changes in Hodge Group business practice that Mr. Borrie studied were the steps being "taken to reduce substantially line area of op of the 62,697 consumer credit tions in which applicant comlicences issued by his office since panies accepted business

on Post **Office** board

BY JOHN LLOYD

MR. LEONARD WILLETT, a member of the national execu-tive council of the Post Office Engineering Union, has been appointed as a part-time member of the Post Office Board. He succeeds Mr. Arthur Sim-per, one of the union's two original appointees to the Board. who died tihs summer. Mr. Wilthe union at a special con-ference more than three months

ago. He said last night that the last year had been critical for his union and for the Post Office, largely because of the progressive introduction of new technology. The union had felt it necessary to ward off some of the effects of that technology by shorter working week.

There would be a continuation of the pressures after the adoption of microelectronic technology and the union would face a challenging time.

There are seven union repre-sentatives on the board, which also contains seven management members and five part-time independent members. The indepen-dents have been re-appointed for

a second year.

They are Mrs. Janet Walsh and Lord Winstanley, who represent consumer interests. Mr. Derek Gladwin, a regional secretary of the General and Municipal Workers Union; Professor Michael Posner, who takes over the chairmanship of the Social Science Research Council next month, and Mr. Peter Walters, chairman of BP Chemicals.

Tapsell returns to back bench

By Richard Evans, Lobby Editor MR. PETER TAPSELL, a Con-

servative spokesman on Treasury and economic affairs, has decided to return to the back benches in order to speak on a wider range of subjects.

Mr. Tapsell, MP for Horncastle since 1966, has been an articulate and outspoken frontbencher who disagreed with the more extreme economic policies advocated by some Right-wingers, but his resignation has not resulted from policy differences with the leadership. He stressed yesterday in a letter to Mrs. Thatcher that he would continue to give his full

support. He considers that he would make a greater contribution to the Party's future from the back benches, "where I would be freer to speak on a number of subjects, particularly in the fields of foreign affairs and energy."

In a warm response, Mrs.
Thatcher said that his services
had been "of immense value"
and the leadership would miss his advice and debating skills. She hoped Mr. Tapsell, a stockbroker, would one day rejoin the

Stone bow fetches £26,000

New voice Company to invest £10m at Kent microcircuit production plant

Demand for computer

BY MICHAEL DIXON, EDUCATION CORRESPONDENT

courses leaps 48%

INTERNATIONAL Telephone and Telegraph (ITT) has decided to concentrate its investment in advanced electronic microcircuit production in a UK centre, it was

in a UK centre, it was announced yesterday.

With British Government help, it is to spend £10m at its plant in Foots Cray, Kent, on developing and producing new microelectronic circuits using the latest metal oxide semiconductor (MOS) techniques, One of the most important of these products will be a 65,000element computer random access memory chip (64k RAM). This is the product which is expected to form the basis of the National Enterprise Board's £50m wenture into semi-conductor manufacture in its

new subsidiary, Inmos. The 64k RAM is also likely to be made in a new plant in the

UK to be set up as a joint venture between General Electric and Fairchild, of Palo Alto, California. This venture will also be helped with Government

f70m ald scheme for the industry. But Dr. Gerry Thomas, general manager of ITT Semi-conductors (UK), said that the

Footscray plant had already become the company's world

taken on December 1 when two-thirds of total applications are usually in - also

ITT's decision to concentrate centre for the production of its MOS technology development computer memories. computer memories.

In the four years since it started memory production, the plant has produced 4m devices, and is now making the high-density 4,000-element (4k) and

at the rate of 600,000 a mouth.

99,853, in the number of British candidates for univer-

sity courses in general. Foreign applications were

8.3 per cent up, at 11,756. But

further increases in the admission of overseas students

is being discouraged by the Government, which has threatened to reduce univer-

sities' financing if they exceed their "quota" of foreign

producer in Europe, with about 10 per cent of the world's market for the 4k device.

Production of computer memories was technologically the most challenging part of the microcircuit industry, the microcircuit industry, because the very high density of components being achieved tested a company's capability to

the limit.

The price of the 4k RAMs on the world market had fallen by about 40 per cent this year. Any company wishing to stay in the market must increase its efficiency by a similar amount. It must achieve this by constant technical innovation to reduce wastage and increase through-

ITT had chosen the UK for future development partly because of the availability of excellent engineering talent in the country. He said the com-pany's plant at Foots Cray had tion for engineers coming to the UK from America and else-

EEC in £1.1bn technology boost

EEC COUNTRIES have committed about £1.1bn in support of microelectronic technology and its appliances, Mr. Kep Simpson, director of corporate development for consultants PA International, said yester-

PA International has been ppointed to help the UK Government plan a programme to increase awareness in industry of the applications for microelectronics. The contract been allocated, but it will be for the initial plan, due to be drawn from the £55m comcompleted by January 24, is mitted to the Microelectronics

worth £50,000 while the "aware- Applications Programme, anness programme" will run over a three-year period.

The amount to be spent by each EEC country is still not known although it is likely that the UK, with a committed expenditure of up to £400m, leads the way. France has committed between £250m and £300m, West Germany a lower figure.

The budget for the three-year. awareness programme has not

nounced earlier this year. The Department of Industry

said yesterday that the "overall objective is to secure full understanding among decisionmakers in industry and the trade unions of the pace of the technology and the breadth of its applications in product deand in production methods."

A crash programme of conferences and seminars will be held next year in a bid to over-

Government believes exist in the minds tof many executives, and to encourage senior management to think of pos-sible applications for microprocessors in their own products and companies.

Mr. James Cooke, project director of the PA team, said he thought the awareness scheme would have two parts: first, a general presentation to the estimated 50,000 decisionmakers in UK industry, and second, a sector by sector approach, using more specialised

Dr. Owen endorses future

By John Hunt, Parliamentary

THE GOVERNMENT is adopt ing a confident but pregnatic approach to Britain's future inhe EEC, according to Dr. David Owen, the Foreign Secretary. He also maintains that membership of the Community is now a fact of life for all sections of British society, including indus-trialists, trade unionists, busiessmen, financiers and farmers

His remarks are made in a long article on British policy towards the Common Market which appears in the January issue of Encounter the monthly review of politics and literature Dr. Owen's firm endorsement of UK membership is likely in upset the Left-wing and into Marketeers within the Labour

Marketeers within the Labour Party, who are still pressing for Britain's withdrawal.

By chance, the article appears the day after a speech backer the Mr. Francis Pym. the new Conservative spokesman on foreign affairs, who promised that a future Tory Government point work wholeheartedly for the success of the EEC.

Growing strength

Dr. Owen says that the British stake is firmly set in the Com-munity. For Britain, the Community is a permanent factor of domestic and foreign policy. Apparent failures within the EEC hide a growing strength; and he refuses to be descondent about its future development.

its pricing system and that pro-Much of the article is devoted to detailed criticism of the workings, of the Common Agricultural Policy, and of EECs fisheries policy. Nevertheless, The Federation said last night Dr. Owen insists that Britain approaches the reform of these policies in a constructive and tem was being restructured with the effect that the closer customers were to works, the less not a carping spirit.

prices would rise further away He also promises that on the European Wonetary System which begins in January with our British participation the UK attitude will be constructed. from a recommendation in last Previously, distribution costs were cross-subsidised and so spread equally over customers. five and not one of opposition

> Dr. Owen argues that the impact of direct elections to the European Assembly next June has been greatly exaggerated. The influence of the elections would take longer to develop than most people anticipate.

more power

for Auditor

BY MICHAEL CASSELL, BUILDING CORRESPONDENT Tories plan CONSTRUCTION ORDERS in Public, non-housing orders in

General

THE CONSERVATIVES plan to give the Comptroller and Auditor General more powers if they win the next General,

Such a move would be in line with the recommendations of the Commons expenditure committee which suggested last year that he should go beyond the purely financial and regulatory Government auditing, ob which he concentrates, and take a more positive role in monitoring of Government managerial efficiency.

Interview

In effect, the Comptroller, at present Siv. Douglas Henley, should be able to perform a similar role to that of the U.S. General Accounting Office, and chase public money; concentrat ing on resource and cost benefit

The Tory line emerged in an interview with Mr. Lealie Chapman, author of Your Disobedient Servant, in which he recounted his experience of try-ing to cut waste in the Ministry of Public Buildings and Works

or income tax, excise duty of income tax, excise duty or income tax.

Mr. Chapman told the National Federation of Self-cannot continue indefinitely to consume more than it produces, without running the two distinct, but interlinked, risks of accelerating inflation and return to balance of payments deficit.

Cement makers seek 11% price increase BY MICHAEL CASSELL BUILDING CORRESPONDENT

FINANCE FOR

-mance Director

Malawi Tea Estate A major international group requires a qualified and commercially experienced accountant for its tea and coffee estates in Malawi. The estates employ some 5,000 people and have a turnover close to £3

Reporting to the Managing Director, the person appointed will control all the normal financial functions, review systems and implement improvements, carry out the duties of Company Secretary and take on an increasing role in administration. including crop marketing.

In addition to having the necessary skills to carry out these duties, applicants should enjoy an involvement in the training of both expatriate and local staff.

An attractive salary package will include generous overseas leave, education allowance, free fully furnished accommodation, a company car, free medical treatment and a tax free gratuity. The appointment would be based on a 24 - 30 month contract and there are good prospects for iong term employment within the group.

Replies will be opened and acknowledged and forwarded direct to our client, unless reference is made to any company to which your application may not be sent.

Please write to A. C. Crompton quoting reference 764/FT on both envelope and

Management Consultants 128 Queen Victoria Street, London EC4P 4JX.

Our client is a leading company in the Oil trading field

We seek an Oil Specialist with 8 - 10 years experience in Crude Oil Menagement to be in charge of purchasing selling and exchange (annual trade up to 10 million tons).

The successful applicant will be a university graduate (Oil or Economics) and be fluent in English, Knowledge of another European language will be a plus.

The position, based in LONDON, will require frequent travel and offers pratically unlimited salary and benefits.

Junior Candidates with less Oil experience could qualify

for an opening in the Oil Products Department as :

with extensive international operations

INTERNATIONAL STORES LIMITED

Future Chief Executives

A small team of executives (two or three men and women in their late 20's or early 30's) is being formed as a business development project team for a national retailing group based in London; the project team will be accountable, through their Managing Director, to the Group Chairman.

The purpose of the project team is to examine and recommend developments in the areas of food-related mass merchandising and distribution. A secondary objective is to investigate and set up new enterprises in the field of multiple retailing. This will involve practical research, planning entry into new market sectors, pilot operations and the establishment and expansion of new businesses which may be based on limited acquisitions. These enterprises will either operate independently within the main Group or serve to develop distinct new formats for the existing four operating divisions in the Group. It is intended that members of the business development team should, within three years, become integrated with the top operating management boards with a view to succeeding as Chief Executives of one or other of the businesses in a venturesome and dynamic organisation.

Candidates with skills in marketing, finance and administration are required whose ambition is to enter general management at Chief Executive level at an early age.

These posts offer a unique combination of entrepreneurial freedom and the assurance of excellent salaries (starting at £10,000 - £15,000) and the other benefits associated with membership of a large organisation.

Please write comprehensively for the personal attention of: Pascal Ricketts, Chairman,

Anglo American Corporation Group

Extracts from the reviews by the chairmen of the Orange Free State gold mining companies for the year ended 30 September 1978

Gold market

During the year under review the price of gold set at the ngs increased by 40 per cent from \$155 an ounce on October 3 1977 to \$217 on September 29 1978. Since the end of the financial year the price rose sharply to reach a peak of \$243.65. This latter increase was largely caused by the continuing weakness of the dollar. On November 1 1978 President Carter announced a \$30 billion support operation and at the same time the United States Treasury increased the amount of gold to be sold at its monthly auction to 1.5 million ounces as from December. This had the immediate effect of strengthening the dollar and in reaction gold fell to \$208.25 an ounce in the space of eight fixings. Since then the price has fluctuated in a downward trend to \$194 in a cautious market awaiting the December Treasury auction. Only time will show if the actions of the US Government will restore the world's confidence in this currency. In any case it is our view that gold will continue to play a major role in world finance.

It is most encouraging that, despite the substantial increase in the gold price during the year, industrial demand has not declined. This has resulted in a more soundly based market than was the case in 1975/76 when there had been an equally strong rise in the price of gold. The position has been aided by the fact that, while the gold price increased substantially in dollar terms. the same was not true in many other currencies.

The second amendment to the Articles of the International Monetary Fund, in terms of which central banks are permitted to trade in gold, came into effect on April 1 this year. This enabled the South African Government to alter its gold payment procedures and the mines are now receiving a market-related price for their gold immediately it is sold to the South African Reserve Bank. In addition, the mines received a once-off boost to revenue in the June quarter arising from the final reconciliation of account between the Reserva Bank and the mines on the change-over to the now system of payment.

The IMF continues to be a large supplier to the market with its monthly auctions. The quantity on offer was reduced in June 1978 to 470 000 ounces, the balance being reserved for those developing countries who wished to take their share of the auction in gold rather than money. The developing countries have elected the gold alternative to a far greater extent that was foreseen and the 55 000 ounces set uside appear inadequate.

On May 23 the first of a new series of gold auctions was Conducted on behalf of the US Treasury, in an effort to bolster the dollar, foreign governments and central banks being dissuaded from bidding. Since then 1.8 million ounces have been sold in the series of six auctions which ended in October. In November the quantity On offer was increased to 750 000 ounces which the market absorbed with relative case. As already mentioned, from December 1978 the quantity on offer will be increased to 1.5 million ounces a month for an undefined period. In the first eleven months of 1978 the combined sales of the IMF and the US Treasury, excluding the IMF sales to developing countries, amounted to 8 million ounces. In the unlikely event that Treasury sales continue at a level of 1.5 million ounces a month throughout 1979, there will be some pressure on the gold price. The reaction of the price to this pressure will depend to a great extent on the levels to which demand for

The strong interest shown in gold during the year is also reflected in the increased volume of Krugerrand sales which is expected to reach a record level of around 6 million coins by the end of 1978, absorbing approximately a quarter of the South African production. This compares with 3.3 million during the Whole of 1977. Kruger and sales have fluctuated over the last six years but comparing 1972 with 1978, sales have grown from 544 000 coins in that year to the projected level of 6 million this year. Industrial demand, as I have mentioned, remains high and offtalle by this sector should again be in the region of 1 200 tons which is more than both South Africa's annual production of around 700 tons and that of the USSR estimated at some 400 tons.

international Gold Corporation Limited, the gold mining industry's marketing organisation, will very shortly open an office in Hong Kong and is stepping up its efforts in the US. There are now offices in Johannesburg, Geneva, London, Paris, Munich, Milan, Barcelona and New York.

Uranium :

The spot uranium price rose rapidly from \$6 a pound in 1973 to \$40 in 1976. The price is currently standing at about \$43 with no indication of any further movement in real terms in the near future owing to the possible impact of new production primarily from Australia and Canada and slippage in nuclear energy programmes in a number of countries. However, delays in the building of not only nuclear but also conventional power stations cannot be allowed to continue without the risk of industrial growth generally being inhibited. Another significant oil price increase or disruption of supply as a result of political unrest could also act as a stimulus to shelved nuclear energy programmes.

Since January the turnover of black mineworkers has steadily decreased partly as a result of high unemployment levals in southern Africa and also the higher wage structure in the mining industry. The rapid increase in earnings over the last few years is now making the mining industry more competitive and it will be possible, with further improvements, to move towards establishing a workforce comprising largely career mineworkers. The benefits of such stabilisation, with the accumulated experience and training, will lead ultimately to improved productivity.

Good progress is being made by the Group gold mines in the Orange Free State with housing programmes to provide increasing numbers of key black workers with family accommodation in the township of Thabong, near Welkom.

During the year the gold mines embarked on a project to provide additional social services to the black employees housed in the single men's hostels. These services are being designed to provide for the particular needs of migrant workers who are away from their families for much of the year.

For the second successive year the annual wage award to white mineworkers of less than seven per cent —substantially less than the rise in the Consumer Price Index-demonstrated the employee associations' and unions' willingness to join in the efforts to contain inflation. The award to the black mineworkers averaged 12 per cent. The higher percentage increase should be viewed in relation to the lower average earnings of the unskilled labour force and the impact of continued inflation on this wage group. We are appreciative of the acceptance of the policy of differential awards by the white workers.

The Franszen Commission appointed by the Government to examine the feasibility of a five-day working week, also reported

on the effects of the eleven-shift fortnight arrangements which have been in effect since April 1977. If found that write production in the mining industry has increased by 2.4 per cent dwing to freely available black labour, the productivity of black labour decreased by six to seven per cent with an accompanying increase in working and capital costs of R29.5 million and R7.8 million respectively. The white labour force increased by 6.5 per cent, and

The Commission pointed out that, over the period covered by its study, the additional revenue flowing from the higher gold price had been used to a significant extent to briance escalating costs. In the light of experience gamed of the eleven-shift fortnight. the Commission warned that the most recent rise in the gold price should not be used as a justification for the introduction of a system which would further increase costs.

Although the effects of the eleven-shift fortnight arrangements on production and costs cannot be ignored, the Commission has recommended that it should continue until technology and/or work procedure can be adapted to the extent that a five-day working week could be introduced an a rostered basis without prejudicing production, working costs or safety. Meanwhile, management and labour should devote their attention to overcoming the problems associated with the eleven-shift fortnight.

Working costs

Shareholders have long been aware of the serious escalation of costs in the gold mining industry and the fact that they have been increasing at a rate for higher than the derival level of inflation in South Africa. I feel that an analysis of some of the factors which have contributed to this position would be of interest.

During the years of the fixed gold price and eroding profit margins, financial resources which could be down at at to ensuring the longer-term future of the mines were rimited and, in facil, more and more minus needed State assistance to our live. However, or en the period 1972 to 1975 the average enterpresent differ the Orange. Free State mines has increased from 37,102 to 37,92 a Mic gram or an approximate average growth report 37 to a single way. This has obviously had a timper it had an increase and over this relatively short time spirit banachardes, the principle of a deading the life of the gold mines.

The rate-of hidding by the County First Landauers of the same period increased by 10 period () and increased by 10 period (). per centila year. However, or so this house, and he had simplify the most meaningful measure of across; only in the process disclined by 13 per cent, and galo production diagnet on an 37 per cent of an average annual anchors of post over the managed filters for steel quite clearly the trend in the inclusion towards reasoning previously unpayable ore and supprementing and increme die with ones washed from outrent waste and surface out to su

Eshaut productions, onling to the difficulties associated with palar mining, is lower and the upser of re-equipping these areas are high in relation to the available tonnage. Since 1972 the tonnage need from reasonable in our mines has steadily increased to the point vinere, at nome of the older shafts, over half the tonnage is won hom ereas previously. mined. The difficulties associated with mining these remnants result in an increase in stoping width and dilution of the ore with a consequent decrease of grade. With operation, moving progress; vely further from the shalt, travelling times for both man and materials are continually increasing and give rise to a decrease in available time at the work face. Under three discumstances, the effective use of manpower is an on-going problem for manage-

Power consumption over this same period has increased from 481.8 Kwhr/centare mined in 1972 to 793.3 Nwhr centare mined in 1978. This very significant power increase has been caused almost entirely by increased ventilation and religioration. requirements in the more extensive underground workings of the mines. At the same time the unit cost of power has increased from 55c/Kwhr to 147c/Kwhr or by 167 per cent.

Another of the major contributory factors is the rise in the cost of stores. The mines utilise large tonnages of steel in one form or another and the price of steel has been used to illustrate the problem. The delivered cost of steel plate, for instance, over the period 1972 to 1978 has increased by 257 per cent.

Over the same period average black wages have increased by approximately 400 per cent and now constitute over a quarter of the working costs compared with approximately 20 per cent in 1972. In the past it was felt that the rates paid to black workers need only be adequate to attract sufficient workers into the industry and this policy was applied until 1971 when, with the improvement in the price of gold, a positive decision was taken to increase the black wages so that the general standard of living of the workers and their families could be improved and at the same time attract a higher calibre of worker into the industry.

Associated with the increase in wages, more emphasis on training and development has raised costs in an area which will have long-term rewards. A further factor which has impacted on employment costs is the general improvement in living conditions of the workers in the hostels and services associated with

Two other areas where completely different levels of activity pertain in 1978 as compared with 1972 are research and development and gold promotion and marketing through intergold.

This company contributes to the expenditure incurred on research and development by both the Chamber of Mines and the Anglo American Corporation Group. The levels of expenditure in this field have risen from a total of approximately R4 million to R24.6 million. The research expenditure nonetheless remains low in relation to turnover of the industry and also relative to the possible future problem which the industry could face in attracting men to work at greater depths under more difficult physical

As mentioned previously, intergold is now operating worldride and total expenditure has grown from an insignificant sum in 1972 to R24.5 million in 1978. Part of this expenditure is financed by the jewellery trade and the rest by the gold mines of

I have highlighted some of the more significant areas where factors beyond the normal escalation have had an impact on production costs. Management faces a growing challenge to improve productivity, particularly with regard to labour if the older mines are to remain profitable, and to continue to give the shareholders a reasonable return on their investment.

COMPONENTS Reliable capacitor

BIVAR is a dry metallised film capacitor for application on most low voltage networks and, Bryce Capacitors (BICC) says, it is the first reliable dry metallised film power capacitor, thanks to the use of advanced dielectric materials metallisation.

Tests have shown that the use of a low-loss electrical grade polypropylene dielectric means that power losses in Bivar capacitors are extremely low, amounting to 20 per cent of a conventional impregnated paper dielectric capacitor. Substantial savings on running costs are possible.

THE MARKETING SCENE

McCann-Erickson is considered disciplined, practical, well-managed. It also gathers in new advertising accounts like a combine harvester, so that it is on the brink of becoming Britain's biggest-billing agency. Profile by Michael Thompson-Noel

The right one, the bright one

advertising agencies sometimes acquire reputations that are at acquire reputations that are at odds with reality. Some are thought out of touch, some too-frantically on the button. Some are dubbed song and dance shops, others scorned for lack of pace. It is a fribate, then, to the skill with which McCann-Erickson has positioned itself in the market that it exious a in the market that it enjoys a reputation that is corroborated at all levels of inquiry. It is arguably the best-run agency in Britain. It is considered disciplined, practical, well-managed above all, business-like. If gathers in new accounts like a combine harvester, sheaves them carefully, then works night and day to protect them from changes in marker climate or the flattery of predators. It moves well, punches hard. McCann is street-wise, if not street-mean. No wonder it about to become Britain's biggest-billing agency.

Even the negatives are posi-tive. "Mechanical McCann." says a rival adding that by that he really means its ability to perceive and help solve the marketing problems of clients as diverse as Tesco and Levi Strauss, Lyons Tetley and Esso, Carreras Rothmans, Bass Charrington and the the Milk Marketing Board. "Hatchetmen," says another, admitting that he wished he could woo a fraction of McCann's higher management "Cowboys," save a third, wishing he could win fraction of its business.

Which explains why McCann-Erickson is the agency of the year, perhaps of any other. In recent times it has added more growth to a bigger turnover base than has been achieved in Britain before. In 1968, MCann billed approximately £7m. By 1974, billings were £25.1m, fractionally in excess of 4 per cent of all expenditure through IPA agencies. This year, total group billings should reach 275m—£59m bandled by the main agency, the rest via its Harrison McCann and Universal McCann satellites.

Of that complex in the world. Of this complex in the world. Of this complex in the world. Of this past three years has come via year expects to handle approximately \$1.25n, including \$600m in the addition of new business mately \$1.25n, including \$600m in the addition of new business in Europe and \$350m in the lines is very well balanced. U.S. That makes McCann the lines are completed. The Although pened in European multi-nationals and McCann more than a taird by U.S. based

E250,000. Service Esso (in 1970 Esso was Unlike some agencies, it is by still accounting for a third of pe means dependent on the like a roll call of commerce, McCann's London billings). By generosity of a few big clients including Rodak (a £5m account the mid-1950s McCann had The main McCann agency at the mid-1950s McCann had The main McCann agency at L. Walter Thompson), the national network, representing in excess of £1m. But it also isnuch of the Daily Star for clients such as General Motors, has eight billing in the £150,000 Express Newspapers. Kentucky. Coca-Cola. Del Monte. Henkel. 10, 5250,000 Table 10.

Noilly Prat and Victoria Wine, and a further 15 spending less than £150,000, including Anglia Television, Arsenal F.C. and the National Playing Fields Associa-

If its rivals in Adland envy McCann's ability to win new clients, they are almost sick to hang on to them. Beecham Proprietaries, for example, appointed McCann in 1964, giving it a start-up sum, for Bodymist, of less than £100,000. Today Beecham is spending £1.75m on five brands via McCann. Rothmans joined the fold in 1970, billing £680,000. The agency now handles seven Rothmans brands, plus five in development. Nabisco signed up in 1958, giving McCann £200,000 for Shredded Wheat Today's score: eight Nabisco brands and £1.7m in billings. Martini and Rossi? They arrived in 1970, billing £600,000. This year's figure is approxi-mately £3.6m, plus assignments

This sort of business perform ance leaves a sour taste in the rivals. According to the head of one such agency, speaking this week: "Around town, their work is thought not to be brilliant-above average, admittedly, but only mildly creative. What they're known within the business for is their acumen.

They're sharp. They're practical and they're expedient. They use their satellite agencies to vast effect, shuffling business between them with great applomb. We admire McCann's more as a superb business machine than as a producer of

great advertising."

managing Ian MacLaurin. director of Tesco, is in no two minds about what he thinks, "We were particularly fortunate in choosing them because they are very much like us in management terms. The first person we met was their chairman, Nigel Grandfield. He made a great impression, but so did the rest of his team. They've got a very hig think tank ut McCann's. They're totally professional, totally dedicated, with a vast capacity for hard work. They quickly climbed right inside our business.
They're not the ivory tower

sort of agency that comes up with lofty ideas that are bloody Zealand meat. By all that's soap is getting a £250,000 useless. Like us, they're highly right they should have been national TV campaign for five practical.'

makes identical noises. So does Beecham Proprietaries and Lloyds Bank and all the other McCann clients I spoke to—all of them, Mr. Grandfield will be delighted to know, enthusing about precisely the qualities that he and his vice-chairman. Barry Day, say they look for in the handling of clients' busi-

According to the Grandfield/ Day approach: "We don't say we know all about advertising. There is no one way to handle a client's business. When a client arrives we cluster him with a team specially selected to respond to him and his market. We go to enormous lengths to understand him and his problems. Then we go to enormous lengths to keep on top of his market situation and adapt our work to his requirements. We get our casting right and do our homework."

They make it sound easy. Easy it's not. What Messrs Grandfield and Day are renowned for (Barry Day is also group execu-tive creative director) is an ability to delegate, which is why the management team they have assembled is the highest-priced line-up of its kind in Europe. (Both Grandfield and Day are on the McCann network's international executive committeethis week they were in Tokyo.)

"I may be the quarterback who throws the ball," says Nigel Grandfield, "but it's the rest of the team who run, catch and score. There's absolu-tely no type of business this group can't handle."

Has the time come for ausc. consolidation? pause. wouldn't say that. Over the last three years we've been extremely selective about growth, turning down as much new business as we've taken on. We're ready. We can go into a major presentation on any subject, any market, within 48

Where next? Mr. Grandfield declines to look too closely into the muddy glass ball of next year, though he puts group billings, via natural growth, at a minimum of at least £90m. It is a measure of the man that when I asked him whether he planned to lay off new business acquisitions for the remaining hours of 1978 and give rival agencies a chance, he actually winced in instinctive remember ance of two accounts McCann's failed to grab this year:
"British Rall Sealink and New

Time for a return to wit

BY MICHAEL THOMPSON-NOEL

IF McCANN-ERICKSON is the advertising agency of the year (see story left) then Roy also, I believe, apply to discussiants for Prices and Consumer Protection, is at least arguably "In the making of advertising "In the making of advertising the marketing community's Man of the Year—Man of the Year in the decidedly technical, totally unseasonal, sense that he, more than anyone, has been responsible this year for pro-voking the advertising and marketing businesses into profitable contemplation of precisely what it is they are doing and exactly what they stand for.

Mr. Hattersley, of course, has achieved this effect by harping on what he sees as the unacceptable face of marketing; its occasional ability, as he sees it, to exploit unwanted wants among the poor and the vulnerable and to prop up products and markets (to date blissfully unspecified) via the unadulterated use of advertising muscle.

Yesterday, Mr. Hattersley was due to meet the high-ups of the Advertising Association for a face-to-face exploration of some of the issues dividing them. Unfortunately, the Prices Minister was ill, so the meeting has been postponed until January. This side of Christmas, the

best way to fathom the indignation he has stirred within marketing circles is to read the account, in Admap, of a speech made this autumn by Jeremy Bullmore, chairman of the JWT agency. Mr. Bullmore is known

lary with which marketing is discussed, he said:

" Persuasion, open persuasion, competitive persuasion, truthpersuasion, seems to me a wholly admirable and healthy Mr. Bull activity to be eugaged in. The bull's eye.

Sharing the luck of the Irish

BY ANTHONY HARRIS

IF THE goodwill of one group has been worthy of a bigger of Irishmen could counteract the country. It was over £200m last malignity of another, no more bombs would explode in London this holiday. Irish brokers and investors as just as delighted as might be imagined by the fact that no British exchange controls are going to be imposed against the Irish market. London money has been the prop of the Dublin market in the last year or two. especially of the market in Irish gilts—some £400m of it or more the last year, according to Dublin market estimates-and if would have been very sorely missed. Thanks to the Governor and the Chancellor, the Irish investment community is going to have a happy Christmas after

Obligations

Not long ago, when it still seemed that the Republic was going to stay out of the EMS, along with ourselves, I drew attention to the importance of this flow of British money to the Irish economy; and you might think that now that Ireland is going to get soft German loans as well as unregulated British ones, they have organised the best of all possible worlds for themselves. It does not seem likely to work at all like that. Membership of the EMS carries some serious obligations; and one of them is not national income.

What this means is that although Dublin will have access to more finance than ever, they will have to behave as if they hadn't. On the face of it, then, the fact that the Irish authorities will be borrowing less, and various EEC funds, will offer reledged paymaster—the London

The exchange markets are another question. Up to January 2, the British and the Irlsh balance of payments are one and the same thing so far as the markets are concerned; a deficit on either side of the Irish seas. weakens sterling. After January the punt will be an independent unit, supported not by the demand for sterling in London. but by intervention in the EMS. The Irish economy may be small by comparison with the British, but its deficit, during the cheery

British policy, or British-supported policy, which is rather

The result is that the subsidies Irish farmers get for selling into the British market will of the green pound (the British CAP pound, not the Irish punt) will reduce it further. As a result Dublin forecasters expect the current balance to worsen to some £330m next year. This, by the way, will not show in the published trade figures, British investors should be warned: Irish farm exports are recorded at UK prices, and the subsidy from the EEC appears among the invisibles. The result is that the trade balance may well appear to he improving even when the balance of payments is getting worse, which is suitably Irish.

It will be noticed. It is of course because this financing in London that the Irish are imposing exchange controls tight enough to satisfy the Bank of England that there is not likely to be any such thing as a controls at our end

half that budget. from injuries received in a Martini Rossi the international crash during the Italian Grand Prix. Carlos Reutemann, the Argentinian, formerly tracted to Ferrari, took Peterson's place, and Andretti and Reutemann will again spearhead Lotus's attack on the 1979 World Championship. Martini Rossi have a long-

standing association with Porsche, at Le Mans and in other sports car racing events. But the company has been absent from the Grand Prix scene this year after ending its sponsorship of the Brabham leading driver, won the World marque in 1977.

Martini's racing involvement is directly controlled by Count Gregorio Rossi, who also heads Martini Racing.

The amount of money the company is spending on Lotus is not known. But the sponsorsbip cost John Player an estimated £700,000 a year, so the figure is clearly substantial.

ance as the ballerina of the nocturne and the mazurka. Here was an interpretation which would surely have pleased Fokine, no advocate of the mopey, downward drooming manner for this homage to Romantic flight. Sizova was divinely positive in her dances. She sprang and soared through the mazurka, joyously taking to the ballet to life. In the nocturne, her eyes-which she used to point every moment of the choreography—gazed upwards as her body moved in flight, and Sylphides' imagery became clear. Her identification with the spirit of the work was total.

regality of the role if not its followed by Lyubov Kunakova iragedy, yet on these terms it beguiling us in a pretty valse was distinguished, elegant in lente (surely by Drigo), and means, dignified in presence. In matter of technical command there were great rewards in Mezentsova's authority; the choreography had a grand inevitability and the flow of the image, one which spoke with and

The crown of the evening came with the Paquita divertissement. This is a compendium of glittering moments from a Spanish extravaganza restaged honoured since then as an occa-sion for any amount of pyroprises entrees for quartets and dancing is lustrously easy: duets of girls, a splendid pas phronettes and steps of bravura

Spanish jinks have never been higher, and the Kirov alone a prodigy of amused assurance, know how to dance the piece. Many another company could roar into action and bluster and fudge a way through these exurberant and surprisingly authentic-looking Petipa numbers. The difference is that the Kirov restrain any vulgarity, controlling technique by aristocracy of manner. Thus, throughout a cascade of bravura steps there was not one tinselled. cheap moment. The distinction of the dancers' style, their seriousness in interpreting something light-hearted, showed the choreography as a worthy example of the 19th century ballet. The prodigious demands technique. It was a joy to see Alla Sizova buoyant in one solo. fishing across the stage in huge jumps and topping them with mortiple and impeccable pirouettes—virtuosity and elegance hand in hand:

Best of all was the appearance of Olga Chenchikova, who is destined I believe for greatness. She graduated from the Perm Ballet school four years ago, and entered the Leningrad trupe last year. She is, I suppose in her early 20s; tall, very lovely, and quite irresistible. I have rarely seen such radiant assurance and so warming a personality in a young bal-lerina. The impression is of a youthful divinity who dances to please us because it is the thing she likes best in the world. In Paguita she creates an image of absolute happiness. Her

final variation and coda she was almost flirting with the difficulties of the choreography, her charm quite as impressive as her technical exactness. In the code she attempted, and slightly muffed through first night nerves, a sequence of multiple pirouettes and fouettes which defy description. And at every moment the delicious warmth of her personality and style shone through the most arduous steps. She has feet that are delicate and strong, and a grace that seems both physical and spiritual. She is a treasure.

On the following evening she appeared as Odette, revealing the same exceptional serenity of technique. She is too young and inexperienced to surmount the rather perfunctory nature little emotional support. Her well, And living in Laningrad

Soviet hopes and fears

fact accompli of normalisation of relations between the U.S. and China, has put on a brave face and its allies in Comecon themselves need for their own economic development. The face and, in his message to President Jimmy Carter, has called the decision "a contribu-tion to world peace." What is more, he made it clear that the decision will not be allowed to stand in the way of negotiations for a SALT 2 agreement or the effort to maintain good relations with the United States.

But Mr. Brezhnev's message does not mean that the Soviet Union is not deeply worried by what it sees as the possible emergence of a hostile tri-partite ellionee of China-Japan-U.S. Having accepted with the best possible crace the Sine-American decision Mr. Brezhnev and the Soviet leadership appear to have decided that the best it can do now is to urge the United States and the West in general to use their newly established diplomatic and economic links to moderate the Chinese anti-Soviet line and narticularly the military aspect of the "four madernisations."

Attention

This is likely to mean in the first instance that the Soviet Union will step up its diplomatic efforts to persuade the U.S. and its allies not, for example, to sell Harrier jets and other sensi-tive military material to China. An authoritative article in yesterday's Government newspaper numbers game being played out in the MFBR talks in Vienna. line that modernising China militarily could well re-bound in the long run not only against the Soviet Union but against over into a commitment to real these who are short sighted. those who are short sighted enough to arm her now. "After being armed Chica may turn its eyes not only to the North, but, let us say, to the West or East. That is to the regions of Asia East. where Britain and France have extensive interests."

MR. LEONID BREZHNEV, the kind of technology and Western Soviet President, faced with the finance which the Soviet Union

Soviet leaders are particularly anxious to improve trade and economic relations with the U.S. This message was spelled out unequivocally earlier this month when Mr. Brezhnev and other top Soviet leaders personally met a high-level delegation of U.S. businessmen in Moscow. What all this amounts to is

a situation fraught with dangers, but also pregnant with opportunities. The main danger is that the Soviet Union might turn its back on the policy of detente and retreat into a dangerous, brooding isolationism. There are hints of this in the interview which Mr. Georgi Arbatov. Director of the U.S.A. Institute in Moscow, gave to the Observer newspaper

The alternative, which would require statesmanship of a high order on both sides, would be to move forward from the narrow definition of detente as practised over the last five years or so towards a more genuincly co-operative relation-ship. It would be foolhardy to underestimate the difficulties. But there have been some small conciliatory gestures from the Soviet side in recent months like the relaxation of restrictions on Jewish emigration and the Soviet concessions in the

progress in Vienna and greater efforts to tone down those aspects of great power rivalry which bedevil the situation in Asia, Africa and the Middle

Genuine

The re-alignment of great power relations which has taken place with the re-emergence of China onto the world genuine relaxation of tensions. So far as Europe is concerned the U.S. and its European allies. will intimately involve Europe. The forthcoming summit conacutely aware that to a consider-

A code on steel subsidies

THE DISPUTE over the role steel industry can take place. of national aids and subsidies This re-structuring has been in the EEC steel industry which made necessary not only by the had threatened to prevent the recession in demand but by the renewal for a further year of rapid growth of steel exporting the Davignon system of mini- capacity in the non-traditional mum sales prices and negotiated limits on imports from non-EEC suppliers has been temporarily fear that, because of the preresolved. The Council of Ministers agreed earlier this week to the adoption of a ing will be delayed and obsolete voluntary code governing the use of subsidies which would last until the end of March while negotiations are held on mandatory controls.

A breathing space has thus been gained. But it could be a mistake to imagine that, just market came when it was in the because the West German steel midst of one of the biggest producers are as interested in re-equipment programmes ever market stability as anyone else. the Bonn Government-which, with the backing of the EEC Commission and other member countries, has been pressing hardest for subsidies to be regulated—will be any less half-year. But, though BSC has insistent when the matter is put off commissioning some taken up again in the New Year. Practical

Up to a point, the dispute reflects the widely differing attitudes to the role and form of industrial policy in the meanher countries. Some countries, notably West Germany. emphasise the need for rapid adjustment to market forces, with the least possible intervention by governments. Others, notably the UK under the Labour Government, see a larger rule for subsidies and other forms of assistance to cushion the effects of market forces. But the issues which have given rise to the dispute are practical as well as philo-

The Davigoon measures, together with the very considerable restraint which has been exercised by Japanese steel exporters and the trigger price merhanism instituted earlier this year by the U.S. Government to limit imports of lowcost steel into the U.S., have brought about some improvement in the markets of the world's traditional steel-pro-ducing nations. But the purpose tial re-structuring of the EEC producers in other countries.

steel-making countries of the third world. The West Germans valence of subsidies in other European countries, re-structurplants will be kept running indefinitely at the expense of more efficient EEC producers.

For the British Steel Corporation, the controversy has arisen at a doubly awkward time. The collapse of the steel seen. By bringing forward the clusure of the "Beswick review" plants and by other cost reduction measures, it has managed to reduce its rate of loss to £151m, in the latest half-year. But, though BSC has new plants and is hoping to recapture some of the home market sales it has lost to other EEC producers, it is unlikely to be able to achieve its target of viability in two years' time without persuading the steel trade unions to accept further closures of older plant and further substantial reductions in manpower.

Postponement

In the meantime BSC is drawing substantial funds from the Exchequer (in the form of new capital and regional development grants) to finance its negative cash flow. A further complication is the continuing postponement of the corporation's financial reconstruction on the grounds that it is too soon to judge which assets should be written off and what the future earning capacity of the business is likely to be.

So long as the UK Government allows this situation to persist, other EEC members are bound to express concern. Past experience in other industries has shown that subsidies provided in the name of adjustof the Davignon programme is ment assistance too often have to stabilise the market in the the effect of delaying adjustshort-term in order to create ment and, as a consequence, conditions in which the essen- creating unfair competition for

Why Taiwan will survive

By CHARLES SMITH, Far East Editor, in Taipei

Americans are leaving? Will it struggle on for a few years in increasing isolation from the rest of the world? Or will the Nationalist regime which has claimed since 1949 that it represents the legitimate Government of China finally throw in its hand and sue for terms from Peking?

The answer as seen from Taipei is peither. Taiwan will not talk to Peking for at least as long as the passent Government of President Chiang Ching-kuo remains in power. It will not struggle on in isolation from the rest of the world because, in spite of diplomatic appearances. and in spite of the burst of wrath which greeted last Friday's announcement from President Carter that he was withdrawing recognition. Taipei does not really believe that the Americans are going. Why it does not think so and why it could in a sense be right is explained in the following series of questions and answers. Was Taiwan expecting the

move and is it resigned to it now that it has happened?

The answer to the first part of the question is: yes, but not now. The answer to the second part is: definitely not. The Nationalist Government knew of President Carter's commitment to normalise relations with Peking during his first term of office as President and therefore assumed that the switch would have to be made before the start of primaries for the 1980 presidential election (that is by autumn 1979 at the latest). The Nationalists did not, apparently sense that Washington would try

alarming. A flight of capital. The from the island is generally ruled out, on the grounds that-foreign exchange controls are tight enough and effectively enough administered. Capital inflow could falter, but the consensus is that the fall can be kept within reasonable bounds." Taiwan estimates the 1978 inflow of direct investment from overseas at about \$200m, 25 per cent more than last year's inflow and by far the largest amount recorded since the oil

crisis.
U.S., European and Japanese companies that have been putting money into the island this year can be assumed to have known that normalisation before choosing Taiwan as the site for their investment. This should mean that companies already on the island will wish to expand their operations as the economy grows, even if some newcomers hesitate. One company which quite obviously sees things in this way is Ford Motor whose Taiwan joint venture announced a major expansion plan three days after

Sharpening the Cutler St. knives

The Cutier Street warehouses in the Port of London are not on every tourist's itinerary. But to judge from the controversy surrounding their impending partial destruction they should be. "Part of all our lives" is how Sir John Betjeman waxes on the 18th century buildings with their Henry Holland façade. And Professor Raimond LeMaire, president of the International Council on Monuments and Sites, uses adjectives such as "outstanding" and "unique."

These two are among those whose thoughts are flying today to Edinburgh slong with a delegation which is trying to persuade Standard Life to alter its over £50m redevelopment

They face a hard task. George Philip, deputy general manager of the company, tells me: We're quite proud of what we are doing, upgrading a slum area." He says that the 41acre site is enclosed by a brick wall and inside it one can hear the birds sing. "It is most exciting, creating an atmosphere, almost building a city within the

City."
The firm's architects are R. Seifert and Partners, known for Centre Point and the new Nat-West building in the City. But the Royal Fine Arts Commission considers its designs "insensitive and unworthy of their predecessors." It has joined Save Britain's Heritage in asking Peter Shore, Secretary of State for the Environment, to step in. SBH is particularly keen to stop Standard Life destroying the Middlesex Street facade behind which demolition work has already started.

Philip is unsympathetic to such efforts but the Department of Euvironment states that Seifert has apparently changed his plans and that the new ones require the demolition of further buildings on which listed building consent is required. The necessary consent was obtained for the first plans but now the plan appears to involve demoli-

Building. It is here that Shore could intervene, as happened over the planned demolition of the Liverpool Lycoum, if that is, Cutler Street begins to appear on more maps.

Reef not

Is the Royal Thames Yacht Club sailing in shallow water? No more so or less so than any other club," says its Rear Commodore, Stephen The question James. inevitable given the announcement that the haven of ocean racers is dispesing of its Club House at Warsash on the edge of the Hamble, "We are selling it rejuctantly as it is not being sufficiently used to justify the overheads," James says.

He was not able to tell me whether the club's membership was rising or falling since it has some ten different classes of members. But he rejected any suggestion that the Club was reefing its sails. It is "very actively looking" for another site on the South Coast, he says. As for its Knightsbridge headquarters this remains in as good a shape as its reputation as one of the world's two top yacht clubs, even if it has now reached an agreement allowing members of the Anglo-Belgian Club to make use of its premises,

keep an eye on Hadrian's Wall for the next clues on Mao's

For the birds

Bash Buzby and make Avon happy," is the slogan which the rubber company has been chirping to its employees, though at the expense of a storm in a birdcage with the Post Office.

Worried at the £50,000 per year telephone bill at its head-quarters in Melksham, Wiltshire, the company put up 200 posters inside its buildings showing the PO's feathered While loyal Chinese are airing friend reeling backwards from a punch with a giant boxing glove. " Reep phone calls short " was the message and advertising manager Geoff Fry says un-repentantly: "I think Buzby is a rather nauseous little canary. But he adds: "As Christmas is coming we are quite prepared to send Buzby a sack of canary

seed as a peace offering." Avon says that the poster has not amused the Post Office which has asked the company to withdraw it. But the Post Office version is rather different. They argue that Buzby is misrepresented since the PO too

wants shorter calls during the business hours when 80 per cent of calls are made. Moreover, they say that when they mentioned this to Avon's press officer he first professed ignorance and then asked if the PO wanted the poster withdrawn No," was its reply, even if this meant abandoning Buzby to the

By any other name

Purists can be thankful their sensibilities have not yet been assaulted by a fresh definition of "banana." I quote it as used in its new meaning: "The danger of a serious banana is increased if we do not bring the inflation rate down.

These are the mysterious words of Alfred Kahn, chairman of the U.S. Council on Wage and Price Stability. He explain: that the White House does not like the more conventional expression: "From now on you'll never hear the word depression ' from me." Politics conducted in such terms would at least be colourful, if a trifle confusing to outsiders like the electorate.

Faute de mieux

A Berkshire reader went to investigate an ear-splitting noise in her small son's nursery and found him beating two sauce-pans and a tin tray with a hammer while her au pair girl looked on unconcernedly. "What on earth is going on?" she demanded. "Madam," the an pair said, smiling sweetly, "this is the only way I can keep him quiet."

Airports and Airport Services

Most major airports throughout the world are now being improved and expanded, at

considerable expense, to ease the strains already being caused by the recovery of

air travel, and to prepare them for the expected further traffic growth of the 1980s.

Numerous developments are planned, especially in the Third World, but in many

places environmental and financial constraints remain major problems.

A major growth in air traffic

THE RECOVERY in world air travel in the past year or two has been astonishingly rapid, rearity due to the stimulus of cheaper fares but also to the release of a pent-up demand for travel in many countries after the recession of the early to mid-1970s. The average annual expansion in world passenger traffic up to 1983 is forecast at 8.7 per cent, with further growth expected beyond that. In some regions this growth is expected to be even greater, amounting to as much as 14.8 per cent a year to and from the Middle East, for example, or about 12 per cent to and from

- Air cargo is also projected to grow at a rate of 11 to 12 percent a year world-wide through to the mid-1980s, with a growth of about 7 per cent a year thereafter to the end of the century.

These forecasts indicate that the air transport industry is now moving swiftly out of the doldrums of the mid-1970s, and that short of some unforeseen international upset, the present level of 600m passengers a year on scheduled services world- rudimentary-not only so far wide should double by the early as airports are concerned, but to mid-1980s, and double again also including such things as

by 1980.

worth of new sirliners by the mid-1960s, and several new types of airliner, such as the Boeing 757 and 767 twinengined short-hanl jets and the rival European A-310 version of the Airbus, together with the smaller British Aerospace 146 feeder-liner, have all been launched this year in a bid to capture a share of this market.

This expansion will also have a significant impact upon airports throughout the world. Despite the period of slack traffic growth of recent years, which offered at least some chance for the ground infrastructure of world civil aviation to catch up, it is still in some respects lagging behind the developments that are taking place in the air. In the industrial areas of the world, such as Western Europe, the U.S. and Japan, where air transport is already highly developed, airports are already becoming congested, and very large sums are either already committed, or will have to be, to ensure that this congestion does not become worse in the 1980s.

world, especially in the rapidly developing countries. ground infrastructure for civil aviation either does not exist at all or apart from a few netable exceptions, is comparatively

happening elsewhere. civil aviation offers a rapid

means of stimulating economic growth, and in those countries it is already possible to identify over 100 new airport developments, or expansion programmes involving existing airports, that will cost in all an estimated £10bn to complete by the early to mid-1980s. There are undoubtedly many others aiready in the conceptual planning stages, which will emerge soon, so that well before the end of the 1980s, several times that sum will have been spent on airport developments worldwide, ranging from improvements to terminal buildings through to the most expensive and ambitious programmes such as siting new airports offshere on reclaimed land.

Aiready many of the govern-

Constraints

The development of airports world-wide, however, is being influenced by several major constraints. One of these is the growth of environmental objections to civil aviation on the grounds of noise and pollution, more generally the former. It is difficult for anyone connected with aviation not to have considerable sympathy for these who live and work round airports. There is no doubt that air frame control and en route the early post-war development To meet this anticipated traffic navigation aids. In these coun- of civil aviation, and par- encouraged the development of growth, the world's major air- tries, too, substantial sums are ticularly the early development a quieter and cleaner "new liner manufacturers are fore being or will have to be spent, of the jet engine, paid little generation" of airliners, such castling sales of over \$240 m to ensure that those countries need to environmental and as Bosing 757s, 767s, European

system is now paying the price ments of the developing in terms of objections, amountcountries have recognised that ing in some Western European and North American cities to

outright hostility. The growth of these environmental lobbies has made it virtually impossible for any government or civil aviation authority to contemplate the development of a new airport, even the expansion of an existing one, without paying considerable attention to the environmental problems of noise and pollution. These are now highly significant factors in the development of all civil aviation, governing not only where new airports are to be sited, and even if they are to be built at all, but also just what can be done to improve existing airports to enable them to carry more traffic and, in the eyes of many environmentalists, to generate more

The environmental objections to civil aviation have increased at such a rate over the past few years that they have resulted in new noise legislation in many countries that will effectively put out of service by the mid-1980s many of the pre-"older generation" jets, such as Boeing 707s, DC-8s, VC-10s, Tridents and Elevens. At the same time, of those airports, but also these moves have already

that the world air transport Lockheed TriStars, McDonnell Douglas DC-10s and Boeing 747s. Environmental objections have played a large part in restricting the development of upersonic civil aviation, with

> But the environmental prob-Jem has also imposed other Expansion constraints on airport developments. For example, it is now difficult, if not in some cases impossible, for many airports sion in the 1980s, these to spread beyond their existing environmental pressures will inboundaries. This means that crease rather than slacken. As any expansion has to be confined to the development of terminal buildings and other authorities to pay more facilities inside existing peri-attention to them at the meters, and it virtually rules out the development of new runways at most airports. Where new airports are required-and several of them will be needed in the 1980s in various parts of the worldthey will have to be sited further away from city centres than most airports are at present, thereby creating problems and greater expense in the provision of road and rail access

At the same time, these environmental pressures have virtually to close their airports during the night hours to jet airliners, thereby not only reducing the economic potential creating problems of the scheduling flights for the airlines themselves. Airport authorities have do create something of a been obliged to study a wide dilemma for governments and

can keep pace with what is pollution issues, with the result A-300 and A-310 airbuses, range of new techniques to spread the increasing burden of air traffic more evenly through the remaining hours of the working day - such as incentives in the form of cheaper landing fees for off-peak travel - so as to ease congestion during the peak

It is clear that as world civil aviation is poised on the edge of another major era of expan-

a result, it will become increasingly necessary for airport earliest stages of airport conceptual planning, if only to avoid having their development or expansion plans overthrown or delayed at a later stage by unexpected objections. In the UK, problem has been recognised, and the Government has established the Airports Policy Advisory Council, representative of all interest in civil aviation, together with local authorities. environmental groups, trades unions and other bodies, with the task of working out airport plans several years in advance so as to take possible ali objections thereby hopefully preventing any delays in the eventual implementation of

those plans. Just how far these environmental pressures will influence of long-distance the future course of civil aviation remains to be seen. But they

airport authorities - how to strike a balance between the growth of civil aviation and the environmental implications of that expansion. As Mr. Stanley Clinton Davis,

Parliamentary Under Secretary responsible for civil aviation in the UK has said, no one has yet sion of world civil aviation is discovered an accounting likely to prove one of the system which can measure the quickest ways to economic stazcosts of airports in terms of environmental disturbance against the benefits derived from civil aviation. Nor is there a predetermined formula to maximise the amenities provided by an important airport and at the same time minimise the environmental disturbance. The UK Government, in trying to solve this dilemma, "will not be looking for the impossible, but it spent. For the alternativewill hope to arrive at the best missing the economic benefits combination of factors."

The UK Government's strategy, outlined in its White Paper on Airports Policy last expensive. February, has already aroused criticism, but its proposals for another of the growing problems coping with the anticipated confronting the world air transtraffic growth in London and the port industry. As already sug-South-East, up to 1990, do represent an effort to come to grips with a difficult problem. White Paper keeps the UK's options open for new airport tions, such as those for buying developments in the South-East new airliners, improving safety beyond 1990, if traffic demand requires.

that there should be some limit this century will be formidable. placed on the expansion of air. While in many countries much travel in some countries (such of this cost will continue to be as the UK), and that some borne by governments who

"CONTINUED ON NEXT PAGE

imposed upon them (such as at Heathrow). While it is not impossible to restrict the growth of individual airports, where there are others available to take the overspill (as in the UK), it is essential to remember that air transport is no longer a luxury for the betteroff members of any community, but an integral part of the entire economic life of any country. This is why the countries in the Third World are all so eager to develop their own airlines and airports, and to integrate themselves into the growing world air transport system as a

individual airports should have

"ceilings" of maximum traffic

They have recognised that to cut oneself off from the expannation in the last two decades of this century. It is thus imperative that all countries find their own ways of accommodating the anticipated growth of air transport. If this involves spending more money on new airport developments-say, on quieter off-shore airports-then those sums are likely to prove eventually to have been well of air travel growth in the future-could well prove to be in the long term even more

This whole question of cost is gested, the bills for new airport developments through the 1980s are likely to amount to many But it is significant that the hillions of pounds. Coming on top of the bills in other direcand navigation and communica tions systems, the overall cost of In this debate on civil avia- providing the world with a comtion versus the environment, it plex, up-to-date air transport has sometimes been suggested system through to the end of

passengers a year, we've gotalot to keep up.

Heathrow and Gatwick are London's twin airports.

Together they handle 34 million passengers a year with more international departures than any other city.

British Airports has recently spent over £75 million at Heathrow to modernise the airport.

And help it cope with the surge of new passengers resulting from cheaper air fares.

At Gatwick we've spent £100 million expanding facilities to accommodate 16 million passengers a year.

Now the airports have been joined by the Gatwick-Heathrow Airlink.

Europe's first scheduled inter-airport helicopter link.

Together they make London the major international point for air travellers.

It's the British Airports' job to maintain this position.

We support the Government's policy of transfers of traffic to Gatwick.

We have asked for a fourth terminal at Heathrow to keep pace with traffic growth.

Even so, we shall need further airport capacity in the South-East.

UK facilities are under increasing strain

Passenger Throughput - Millions

Capacity Including Heathrow Terminal

BAA Mid-point

White Paper - Capacity Forecast

alrports authorities in this country is that, with the rapid recovery in the growth of air following the slack period of the mid-1970s resulting from the oil crisis of 1973. available airport capacity is likely to come under increasing strain. The ability of the authorities to meet this growth by expanding the available facilities, however, is itself under immense pressure from environmental and other groups who seek to impose planning constraints on all new airport developments, with the result that those developments are either severely delayed or re-jected entirely. The pace of airport expansion is not now keeping pace with the growth of traffic, and is likely to fall even further behind, with the result hat at some airports congestion is likely to get worse and saturation in the early to mid-1990s becomes a real possibility.

This is particularly the case with Heathrow, in the South-East, where the strain is already beginning to show, as virtually every passenger who uses the airport knows only too well. Currently capable of handling ith to about 30m passengers a year, Heathrow actually handles about 25m, so that unless new facilities come into use by the early 1980s, congestion at that sirport will inevitably grow. with saturation occurring by about 1982-83.

Solution The solution to the immedi-

ate problem at Heathrow hes in the provision of a fourth passenger terminal on the southern side of the airport. capable of handling up to 8m passengers a year. This new terminal has already been sought by the British Airports Authority, but its development is held up pending the outcome of a major Public Planning Inquiry, ordered by the Government, through the Department of the Environment, as a result environmental pressures from local communities round the airport. At this stage, it is

THE MAJOR problem now an open question whether the facing the Government and the building of the fourth terminal will be permitted. If it is, it will only give Heathrow a brief respite until the mid- to late-1980s, for at the present anticipated annual growth rate eventhe additional 8m capacity will have been filled by that time.

If it is not permitted, for environmental Government and the British Airports Authority will be faced immediately with a major problem of what to do about coping with traffic growth. Several solutions already exist, but for various reasons they might not work. One solution would be immediately to oblige airlines to channel more or their services into Gatwick, south of London, where a £100m modernisation scheme (with additional sums still being spent) has raised the available capacity to 16m passengers a year, against the present actual annual total of about 7m. Beyond that, plans exist to expand the available capacity at Gatwick still further, to 25m passengers a year, by building another major terminal at the airport.

But already, the efforts by the Airports Authority and the Department of Trade to courage airlines to move to the comparative peace and quiet at Gatwick, away from the increasing congestion at Heathrow, have met with an extraordinary amount of resistance. Foreign scheduled airlines who have been at Heathrow for many years-some of them almost since it brst opened after World War Two-do not want to move because, they claim, they will be deprived of the substantial volume of inter-airline connecting traffic that is available through more than 50 airlines using Heathrow.

Also, some of them argue that they have invested substantial sums in facilities at Heathrow which would be rendered useless by any move to Gatwick, while many of their staff live locally to Heathrow so that the upheaval caused by any move would also be socially undesirable. While it is difficult not to have some sympathy with those airlines, the hard facts of civil aviation life in the UK are that if they want to avoid congestion at Heathrow, they will have to move to Gatwick.

terminal at Gatwick is certain to run into the same kind of environmental and other objections that currently are holding up the fourth terminal at Heath-

This will inevitably delay the development of any new terminal at Gatwick, even on the assumption that it is eventually approved. Even if the relevant initial planning application is submitted this winter, therefore, any new terminal at Gatwick would be unlikely to be in service much before 1983-84. even if it is permitted at all.

The third possible solution to the problem, the further development of Stansted, north of London in Essex, from its present capacity of about 1m passengers a year to 4m, has already hegun to arouse the hostility of local environmental although It must be stressed that so far this is only an idea, and has not yet been embedies in a formal proposal. But the rumblings now being heard from the rural fastnesses around Stansted are an indication that any further development of that airport will involve a considerable battle, and inevitable delays.

Tibe further development of Luton towned by the local municipality) to about 5m resources for airport develop-passengers a year from the mnet. By seeking to gain agreepresent 3m is another solution. but not one that is likely to provide any significant alleviaports problems, since that expansion is almost certainly that the dangers of last-minute

going to occur at Luton anyway delays can at least be minias a result of the steady growth mised, if not eliminated, and a the years ahead.

20

These proposals—the further laid down. development of Gatwick to 25m, 'about air traffic growth.' All the Stansted to 4m and Luton to current problems in London and 5m-would give a theoretical the South-East stem from the the growth of traffic in London 66m and 89m passengers a year and the South-East through to in the region by the late 1980s, the late 1980s will result in a If the rate of growth experitotal by then of somewhere enced over the past year is between 66m and 89m past continued, not only is it likely sengers a year. Even if all the that the upper level of the development proposals are forecast demand will be approved—and this must be a reached, but also might well be dubious assumption—they will even exceeded. Most aviation only provide capacity marginally economists and observers are in excess of the lowest forecast agreed that only another major growth, and well below the level of demand should growth reach the upper forecast level. If any of the proposed expan-

airports is denied, on environ- recession, air traffic continued mental or other grounds, the available capacity in London and South-East by the mid to late 1980s will fall far short of what is required to growth. In fact, it only needs one development plan to be native but to press for the second terminal at Gatwick bigger. immediately, but the anti-airport lobbies will have gained considerable strength from the one victory to encourage them to seek another elsewhere.

Priorities It is to try to prevent this situation that the British Air-

ports Authority suggested, over a year ago, the creation of a new Airports Policy Advisory Council, comprising representatives not only of the BAA, but also of the Department of Environment Industry in the Government, the local authorities around airports, the trades unions, and other interested bodies. This organisation was, in fact, set up this summer, and has already begun its work. prime objective is to identify the long-term airports problems in this country, even before they begin to emerge publicly. and to try to find solutions to them that will obviate the dangers inherent in delays stemming from planning objections and other difficulties, such as a shortage of cash and other ment from all interested parties well in advance as to what the precise airports development they can be handled, it is hoped

in holiday charter traffic over smooth, well-ordered long-term the years shead.

38m passengers a year, and the is indicated by the uncertainties South-East Airports will an capacity of 72m passengers a forecast of traffic growth thatyear for the London area. But will create a total of between 1990. off crisis or an international economic recession is likely tocut the rate of growth substantially, and they can point to the sion plans at any of the four fact that even during the last

to rise albeit at a much slower But the other major problem that must also be faced is what to do about any further traffic meet the volume of traffic growth beyond the late 1980s. This must be one of the major questions confronting the new rejected, for the problem to Airports Policy - Advisory ing completion, with one run-start showing immediately. Council. For it is clear that way becoming operational by have to move to Gatwick.

Creating a domino effect of couthe growth in traffic is not likely: about 1980-81—and none of the But the other major problem. gestion and difficulty that will to come to a halt in the late current problems; and difficulty that any planning application to to grow. If the fourth terminal slower rate, it will be on a passenger at Heathrow, for example, is continually breadening base, so rejected, the British Airports that in terms of actual numbers land reclaimed from the sea Authority will have no alter- of passengers the annual increase will be bigger and

> The Government has already indicated that it is aware of this possibility. In its White Paper on Airports Policy, published traffic earlier this year, in addition to the proposed developments at the four main airports in London and the South-East. It: foresaw in the period from 1990 enwards the possible need for additional airport capacity being

met in any one of three ways: 1-The further major deve-lopment at Stansted, to perhaps 10m passengers a year or more; 2—The development of an existing military airfield as a civil airport; or

3-The construction of a new

arport on a virgin site. The very mention of such possibilities is probably enough to fill environmentalists with horror, but unpalatable though: develop any big new airport,from initial conception, through choice of site, and all the planning and design stages, and then through construction to be started some time in the early-1980s. This means in turn that the identification of the of England. likely site will have to be under-

itself. The British Alrports Authority has already warned that if air traffic growth accelerates in the immediate aid down.

future, it is possible that the That such a plan is essential pressures on the Landon and crease at a much faster rate, so that any one of these longer-term options might become necessary much earlier than

> The point that emerges most clearly from any study of the current sirports problem in London and the South-East" that it is due entirely to the Government itself failing to grasp the pettle and take the necessary bold decisions early enough, and stick to them. By firmly opting for the develop-ment of Catwick in the 1956s. and sticking to that decision, that airport is now available as an "expansion chamber" for at: least some of the overspill from Heathrow. But if earlier critics of Gatwick as a White Elephant" had been listened to, and its development plan cancelled, the UK would now be in a parious position to cope with air traffic growth. It is becoming increasingly clear that had Maplin not been cancelled in 1974, it would by now be nearwould have arisen.

Maplin, as an airport built on offered almost the ideal solution: to the sirports dilemma of London and the South East, in that it would have provided almost infinite capability for long-term expansion to meet growth, while its associated developments would have provided not only a new port for London, but also done much for the economic regeneration of South Essex But Maplin was cancelled in the wake of the oil crisis and subsequent industrial recession when pressures on UK resources in other directions were severa. and no one rould be sure where Bir transport was going. The queston now arises, how-

ever, that if air traffic continues to rise to the extent that a major new airport develop-ment will be necessary in the 1990s, will Maplin, or something seems possible that it will, it may be the fact must be because the three options faced that one or another of mentioned, two at least are these developments may become "inland" options the major necessary in the early 1000s. necessary in the early-1990s. It development of Stansted and takes almost ten to 12 years to conversion of a military airfield -and almost no one wouldwant to see an entirely new airport being developed on an inland site.

Depending on what happens final passenger use, so that work to air traffic growth, therefore, on any major new airport for the UK could well be in for the early-1990s will have to another major debate on where to put its next major airport for London and the South East

Civil Aviation Directors know IAL ...do you?

The IAL capability in aviation technical services is unique. It is efficient, cost effective, dedicated, and totally professional.

No other organisation offers so comprehensive a range of technical services, nor has so much knowledge or such unrivalled experience of airport planning, management, operation and maintenance.

IAL's capability includes the provision of personnel and the supply and installation of equipment for the management, operation and maintenance of airports, air traffic control services,

aeronautical telecommunications, radio and radar aids to navigation, security systems, meteorological, fire and rescue services, and other associated

These services are provided at more than 75 airports across four continents.

Another of IAL's services to aviation is training. The company has a unique record in the operation of training colleges both in the UK and overseas. Courses are provided to the highest internationally recognised standards, in a range of aviation, communications, engineering, electronics and meteorological subjects.

IAL's aviation technical services are available worldwide-and can be applied to airports of all sizes; from the largest international airport to municipal airports and small local airfields.

DIAL IAL For further information on IAL Aviation Services please telephone 01-574 2411 or write IAL, Aeradio House, Hayes Road, Southall, Middlesex, England UB2 5NJ. Telex: 24114 Cables: INTAERIO Southall

regard aviation as an integral cost of such things as en route part of their economic growth, navigation and other aids. Thus, in other countries there is an comparatively small proportion of the population, for all that air traffic is measured in millions of people travelling each year.

Thus, in future, in some countries passengers may well find an increasing element in their fares allocated to pay fur the construction, development and maintenance of air transport facilities. Already, in the UK, for example, security has been made a charge on the passender, collected from the airlines by the British Airports Authority which in turn pays the eash to the Government, while there are also pressures to pass on to the passengers more of the

increasing degree of resentment for substantially cheaper fares, that the taxpoyer at large should to cater for the mass travel of after all, still used only by a port authorities and airlines will have to strike a balance between the increasing costs of providing the system, and the need to cut more people to use it. This equation may become increasingly difficult to calculate, as more of the costs are passed on directly to the ultimate users, the passengers, who in turn are to become vociferous in their demands for cheaper fares.

But even while this debate is taking place, the pace of development of airports thenselves in many parts of the world is quickening, as subsequent articles in this survey demonstrate. Whether these It would be unfortunate, to their own problems. One point Certainly, in the UK, sirports mous with discomfort in

AIRPORTS AND AIRPORT SERVICES III

Aerial gateways to Third World

transport systems where none have existed before, air transport is the only alternative. The aeroplane, in fact, is

means of industrial, economic and even political and socio-logical growth in many countries throughout the world, in much the same way that roads and the railways were used in Western Europe and North America in the 19th century, in countries where roads and railways either do not exist, or are grammes which show promise on a limited scale, the aeroplane is often the only means of trans. supporting and profitable. port between isolated communities. What begins as a rudimentary link, with a crude airstrip, soon becomes of such importance to the communities concerned that more elaborate airfields are required—although even these are still a far cry from the vast expanses of concrete required at major international airports for major towns and cities.

being used increasingly as a

This rapid expansion of the ground infrastructure air transport in these countries is likely where much of the growth of the world's air passenger and cargo traffic is likely to occur. Estimates published earlier this siderable. In the first instance, year by the International Air Transport Association show that are unable to provide much, if between now and 1983; the any, assistance from their own higgest expansion in air travel resources in terms of skilled is likely to occur between manpower or equipment, and Europe and the Middle East, where it will grow at an average annual rate of 14.8 per cent; closely followed by a growth of

Growth

Between Europe and the Far East, bassenger traffic is expected to rise at an average annual rate of about 9.6 per cent. These growth rates compare with estimates of about 7.5 per cent for the North Atlantic, widely regarded as the most highly developed and sophisticated route of all. It is estimated that there are

probably more than 100 major alrport programmes of all kinds either planned or in various stages of development throughoul the Third World, and probably as many more programmes again of smaller value (those involving simply new buildings such as terminals or hangars, or the updating of lighting, communications, payigation aids -and other equipment), with a collective total value on completion of about £10bn. This figure can only be tentative, because some of the programmes are in the earliest stages of planning and have not yet been costed, or the details have not been published. But on the basis that a major new airport can cost as much as £250m, or even more from initial conception to completion, depending services: equipment and ("Airconsult") is also exten-upon the size and scope in systems world-wide. Formed sively active and is now engaged volved (Maprin, for example, on soon after World War Two by reclaimed land off the UK Essex Coast, was originally expected aviation capability has grown to cost considerably more than substantially in recent years, ment of the Juliana airport on that), the £10bn estimate is and now includes the provision. probably conservative, and is of personnel and the supply almost certainly going to be and installation of equipment exceeded through the 1280s. for the management, operation The accompanying table lists and maintenance of airports, air some major programmes to traffic control services, zero-

generated internally by the Currently, IAL, with 4.000 developing countries them employees working in over 50 selves. For their governments, countries, has a turnover of recognising the growing importance of civil aviation and the urgent need to become established in the world air transport system, are prepared to give top priority to, and spend substantial sums on, these developments. But for many of the smaller countries, the large sums required to establish a civil aviation ground infrastructure are prohibitive, and they need help from outside.

This is available from a variety of sources. The International Civil Aviation Organisation, the aviation technical agency of the United Nations, provides cash and technical assistance to emerging countries. It is helping with airport programmes in Jordan, Gninca, Sri Lanka and Vietnam. The World Bank and its affiliate,

Competition

Such is the competition in the business of providing airports, moreover, that many of the groups who offer their consultancy, design and development services are elso able to help the prospective customer towards getting the necessary funds. There are probably few cases in recent years, if any, where a Third World country has been unable to get the eash it needs for its place. ...

The problems of developing airports in countries of the Third World, however, are conmany of the countries involved often they have only a salight ping and final operation of the complete airport.

For this reason, there have emerged in several countries, notably West Europe, the U.S., Japan and Brazil, several maj ve groups of consultains and industrial organisation who are able to provide these complete " air port packages" to meet the widely varying needs of the

developing countries.
In the UK, they include the recently-crested British Aifports International, which brings togother the expertise in alrport design and management of the British Airports Authority (probably the biggest single sirport owner in the world), and that of International Aeradio, the airline-owned organisation that already provides extensive. support for airport management in many countries, but

notably the Middle East.

The British Airports
Authority is currently helping
to revise the master-plan for Baghdad Airport, and is making traffic forecasts for Mosul and Erbil airfields, with a general forecast for air transport development through Iraq-

Manchester International Airport-MIA the gateway to the heart of 20 million people and 50% of the country's industry.

MIA-Manchester International Airport is today one of the most modern and efficient airports in Europe.

In progrescive development over the last 50 years, Manchester's growth has been of such a scale that it now ranks as Britain's premier airport outside London and is still

Manchester International operates a wide range and frequency of intercontinental flights and an extensive network of domestic services. Over thirty of the World's major Airlines are represented in Manchester and, there are direct services to major European cities and to North America.

The Airport is also directly linked to Northern and Central England through the motorway system and in addition to the immediate availability of the industrial and commercial North West, other business centres—the West Riding.

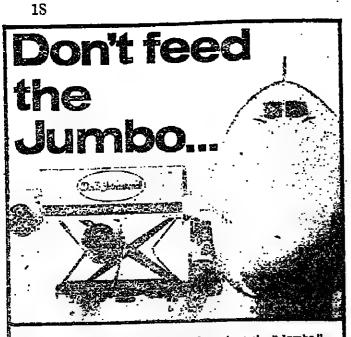

Birmingham, the North East and Clydeside are only a few hours travel away. Over 50% of British manufacturing activities are carried out within 100 miles radius of Manchester and there are almost 400 overseas companies using this area as a base to service British and European markets.

Manchester international has a comprehensive freight handling capability that is continuously augmented by capital investment programmes carried out by the Airport Authority and the International Camers using the Airport's facilities.

The carriers and agents at the Airport offer a collection and delivery service to manufacturers in all the major cargo generating areas and have the facilities and expertise to support those of any company's export department.

Flyvia MIA, it's the gateway to the world from the heart

is designed, and to be fair to the airport authorities and the them. But the passenger can be forgiven for sometimes beeven some airlines—are de and dust, of arriving or depart- sufficient public telephones in ostensibly for the use of signed more for the convenience ing airliners. The holiday- all of those owning and running makers on the way in, excited at them rather than for the people

This may seem to be a harsh judgment, and it certainly does not apply to many of the airports and airlines of Western Europe and the U.S. But, nevertheless, there can be few air travellers who would disagree with it, having at some time or another suffered the agonies of frustration and even despair at the delays and inefficiencies that seem to accompany the running of some airports. And the more that air travel grows, the more the ground segment appears to be falling behind the progress in the air, and the more the frustrations and agonies for the passengers that accompany it.

Requirements

All that any passenger wants from an airport, anywhere in the world, is that it should be clean, comfortable, conveniently located and easy of access, sale and pleasant to use, and, most important of all, swift to pass through, with the minimum of formalities and bottlenecks. It is not a formidable list of unattainable requirements. But it is probably true to say that no single airport anywhere in the world fulfils all of them all of the time. The sad fact is that too many airports do not even try to meet some of the most elementary items in the list, and often only comply with one at the expense of another.

Not all of the world's air travellers are businessmen. Many of them are first-time air tra- of ensuring economic growth. vellers, often holiday-makers But this is no reason for them tour holidaymaker who has not example. other sun-spot, Hastily construc- terminals able place from the air safety There

sheds echoing with the noise, and redolent with the fumes the prospect of their two-weeks vacation in the sun, usually do not notice the deficiencies. But when they are required to wait in the airport for several hours on the way out at the end of the holiday, those deficiencies tend to emerge in their glaring horror. Some of the ambience of the Mediterranean sun-spot then evaporates, and much of the feeling of peace engendered by two weeks' vacation is wrecked by the frustrations and delays the passenger seems obliged to undergo as part of the price of getting home. For it is one of the facts of

civil aviation today that the pace of development in the air has not been matched by that on the ground. The manufacturers are producing ever-bigger airliners, designed to carry passengers more economically (which seems often also to mean more uncomfortably). The airlines buy them in large numbers, and fly them to more and more places, whose Governments and local authorities seem to be only too keen to receive them. But no government or airport authority anywhere in the world spends anything like as much on its airports and associated ground systems as it does on its airlines and its aircraft. This is just as true in the U.S. and Western Europe as it is in the countries of the Third World, despite the many major new airport developments that are taking place world-wide and the acceptance by more and more governments that to exploit civil avia-ton is one of the quickest ways

Some of the biggest airport who have paid very low fares. owners in the world, such as the British Airports Authority, to be treated as second-class do make a conscious effort to citizens, as they often are at study the passenger's basic airports round the world. example. The BAA also does make an effort to cope with the passenger's basic desire to pass through the airport as quickly as possible, but efforts at achieving swift and efficient flows are being hamstrung by the inexorable growth in traffic, requiring constant structural modifications, as well as by external factors beyond anyone's control-such as the fear of terrorism, requiring strict security checks and even body

Delays

Also, the Airports Authority is subject to the normal Government Customs and immigration requirements, which tend at best to slow down the speed at which passengers can be passed through, and at worst to create bottlenecks at some times of the day (such as early morning) which result in extensive delays. Baggage handling delays at Heathrow are also a constant cause of complaint, especially in Terminal Three. There are also faults with the long-term car parking system: the courtesy buses are too small, and there seem to be insufficient numbers of them, so that walts of up to 20 minutes for a bus at peak periods are not uncommon. On the homeward journey, the pickup points are not sufficiently. phones to summon the buses any time. hidden too far away (they should be actually at pick-up points), and there is no attempt made ensure orderly queueing (why cannot queueing barriers be built at the pick-up points, as they are for taxi queues at some major UK and foreign rail-

way stations?). The Central Area car parks at Woothrow are inadequate: has anyone thought of building downwards into the ground, rather than upwards? If the railway can go underground, why can't the car parks, There are other problems at

Heathrow, especially with getting into and out of the airport. Car passengers arriving from the South-West have a par-

moving to and from the cargo area, and other "official" vehicles. Why can't it be thrown open to regular airport passenger traffic moving up from the south and south-west? Is it really essential for the Customs authorities to have such a stranglehold upon it? What is going to happen, for example, if and when the proposed fourth terminal at Heathrow is built with a large proportion of the 8m passengers a year using it likely to need inter-change facilities with the airlines using the Central Area? Will they have to move all the way round the perimeter road, causing congestion there, or will they be allowed to use the cargo tunnel, or channelled into an extension of the underground railway that hopefully will also be built between the Central Area and Terminal

A MAJOR NEW FORCE ININTERNATIONAL AIRPORTS'CONSULTANCY **SERVICES**

Designed to provide an independent, uniquely experienced capability for airport planning, management and operations, together with extensive training support programmes.

swe specialist resources of two of Britain's leading aviation organisations. It offers, to governments and aviation agencies worldwide, a full range of services.

CONSULTANCY For airport projects of any size or complexity and covering aviation operations of all kinds.

PERSONNEL Short or long term secondment of fully qualified and experienced management staff.

TRAINING A comprehensive range of UK or overseasbased courses covering all aspects of airport management and operations.

CONSTRUCTION Designing and constructing new or re-developing existing airports in association with consultant engineers or contractors.

British Airports International Limited is a joint venture company owned on an equal basis by the British Airports Authority and IAL. The two organisations cover the entire range of airport infrastructure, IAL providing expertise particularly in the fields of air traffic

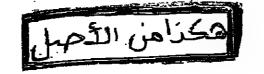

British Airports International capitalises on the extenairport planning and forecasting skills plus accountancy management and specialised engineering advices. The company is already handling major contracts in Baghdad and Iceland and has been invited to submit tenders for a number of other important airport projects throughout the world.

British Airports International is complementary to rather than in competition with the private sector. And it has the backing of the British Government.

For further details write to: Trevor Wilson, General Manager, at the address below.

U.S. network set for major shake-up

THE ENORMOUS publicity given to the current deregulation of the U.S. airline industry has concentrated quite rightly on what it means for the airlines themselves. But an equally important question is, how will the country's 629 scheduled service airports cope with what is certain to be the biggest shake up in the industry's history?

A hint of the trouble ahead was indicated recently by the head of the Federal Aviation Administration, Mr. Langhorne M. Bond, warning that sheer lack of airport facilities could undercut whatever benefits deregulation brings to the airlines. His remarks came only a few days after a Pacific Southwest Airlines jet collided with a light aircraft over San Diego, causing over 150 deaths in the worst disaster in U.S. aviation history.

Congested

Mr. Bond's point was that even if deregulation increases competition among airlines and, hopefuly improves services and cuts fares, the country's major airports are already so con-gested that aircraft will have difficulty getting in and out of them, and even when they do they may not land near a gate take on or discharge passengers.

This year alone, passenger traffic has grown by 18-20 per cent, double last year's rate of growth. And though this hectic pace is unlikely to be sustained, it gives a good idea of the size

These fears apply mainly to the country's dozen largest airports which either by virtue of the towns they serve or their convenient location as hubs for interchanges, handle over 10m passengers a year. Chicago's O'Hare airport, for instance, serving a town of 3m, expects to handle over 44m people this year, while Atlanta (population 430,000) the country's busiest interchange airport—will handle

The pressure on space is fact that all 104 gates at the giant new terminal that National airport. Atlanta is building for the 1980s have already been leased out, in bleak. Dallas-Fort Worth, the

Operators Council International (AOCI), the Washington-based trade group, four major airports, have reached the limit of expansion. These are New York's Kennedy and La Guardia, Chicago's O'Hare and Washington's National airport. In each of these cities, the airlines share out "slots" among themselves on a quota basis. And though some improvements to access roads, and passenger freight terminals are planned, any large increase in traffic would have to be absorbed either by brand new airports, or by expansion of others nearby.

In New York's case, part of the load could be shouldered by the city's third airport, Newark, where a third terminal is ready for completion when demand justifies it. The trouble is that Newark is out of the way for most travellers and the prospects of it becoming as busy as the other two are remote. Another alternative, proposed by the Tri-State Regional Commission, was the development of existing community airports, like Westchester's White Plains, but this is fiercely resisted by

local residents. In the face of an impasse, local planners are pinning their era easing the access problem without increasing aircraft movement. But this still poses the problem of ground handling where a whole new technology based on ideas like "peoplemovers" is growing. .

Atlanta is the leading example of established airports where growth is possible, though it has been predicted that the new terminal will be operating flat out within three years. Los Angeles has just launched a project to double its interimportant hub, is also growing: so is Baltimore-Washington International which should graphically illustrated by the eventually take some of the relieved of obligations to serve fact that all 104 gates at the pressure off Washington's less profitable routes as a con-

But the picture is not wholly

generous capacity and all the administratively with a system According to the Airport nology. A new super sirport is also planned for Palmdale outothers may follow, it is probably too late for more than a handful of citles to prepare such grandiose schemes. Space is limited, and environmental opposition flerce.

Nevertheless, established airports can always expand their by more efficient capacity handling. Travolators and high capacity haggage handling equipment are fast becoming essential. And already, fundamentally new ideas are being applied.

One of the most striking is

Example.

that encountéred at places like Washington's Dulles Interna-tional Contrary to the trend to wards gates which offer instant dis and embarkation. Dulles has gone back to buses, but of a different kind. They travel high off the ground on stilts and pull up right against the aircraft's door, enabling pas-sengers to embark directly as if they were walking off a gate ramp. The advantage of this system is that it does away with the need to pull aircraft up to hopes on the wide-bodied jet the terminal buildings. This in turn eliminates those interminby packing in more passengers able corridors connecting the terminal with the gates, and it enables airports to make the fullest use of their parking

> But the irony behind the trend towards super airports is that many second tier and local. airports are actually suffering a decline in business: some even face losing scheduled services altogether, or at best an end to non-stop services to important destinations.

estinations. This is because airlines national terminal capacity naturally so for the busiest within two years. Denver, an routes, neglecting the short important hub is also consists. hops to outlying places. Deregulation is likely to hasten this trend as airlines are dition for rights to the lucrative

AOCI is fighting the proposal

some cases for 30 years. Any giant airport in northern Texas, by the Civil Aeronautics Board has set a pattern for airports to replace the present practice now have to sublease.

of the future by emphasising of awarding routes to sirlines latest in ground-handling tech of public suction. This is because it believes the airlines will only bid for high density side Los Angeles, But though routes, so the hub will get bigger and the smaller airports will be forced into playing a

The downgrading of community airports would also be financially wasteful since many of them were built as local prestige projects, and are well

Although AOCI's interest is principally the commercial one keeping airports busy, its views are shared by those who fear the social consequences of a big upheaval in air traffic patterns which would leave isolated communities without transport, an argument which echoes long-standing debates about train and rural services.

The net effect of deregulation is therefore likely to be a shift of airline traffic away from the smaller airports which need service to the big airports which, in most cases, will be hard pressed to absorb passengers. The illogicality of this has not been lost on those who operate and regulate the airline business, but it is viewed as part of the price which needs to be paid to achieve the higher goal of leaving the airlines to get on by themselves. The CAB does, however, have the right to review route allocations if it feels smaller communities are getting a raw deal so future Congressional intervention cannot be ruled out altogether,

Problems of regional development

IN THE U.K., there are now 44 in tourism is taking place." airports that is, places with regularly scheduled passenger transport services, either domestic or international or both. These are distinct from "aerodromes." of which there are many more, but which are confined either to military operations or aircraft manufacturers' purposes, or to private, leisure or sporting flying of various types (including gliding, for example). While some of these zerodromes are used occasionally for public transport purposes, such as business flights by company-owned aircraft, facilities such as Customs and immigration have to be laid on specially, therefore they are not generally regarded

cerriser of this

as airports as such. Apart from the airports owned by the British Airports Authority (Heathrow, Gatwick, Stansted, Prestwick, Glasgow, Edinburgh, Aberdeen), and the "Highlands and Islands" air-ports owned by the Civil Aviation Authority, the rest are owned and run largely by local authorities, and only in a few instances by private organisa-

Of the 44 listed as airports by the CAA, the biggest is Heathrow, which in the year to last March 31, handled close to 23.6m passengers. Next is Gatwick, which handled 8.76m. followed by Manchester, with 2.84m, Luton, with close on 2m. Glasgow, with 1.78m and Birmingham, Belfast and Edinburgh, all with just over 1m. All the rest in the year to last March 31 had less than 1m passengers, although some only auch as Aberdeen, with 997,000 passengers.

But as a result of the growth in air travel over the past year or so, most of these airports are becoming busier—the only exceptions being some of the Highlands and Islands sirfields which experiyear. Collectively, the 44 airports last year handled 1,374,000 aircraft movements, of which 785,000 were transport aircraft movements, and over 47m in-seaters such as Piper Navaho year the strike of air traffic con- rantes, and building up from trol-assistants severely cut the number of aircraft movements number of passengers, was a the hope that the traffic will reflection of the big growth that expand to fill the sircraft. was taking place in passenger movements in the earlier months of the year, offsetting any declines in traffic during the period of the industrial dispute.
The Government's White

Paper on Airports Policy, issued earlier this year, saw an increasing role for these regional airports outside London and the South-East in the years shead, as traffic grows and congestion increases at Heathrow, requiring more traffic moving out of that airport into Galwick, and perhaps also to Stansted and Luton, but certainly also to regional airports. The Government's argument is that at present the regional sirports suffer from overcapacity, with only a limited range of scheduled six services, spread over a large number of airports. The Government's main objective, therefore, in the long term, is to encourage the growth of traffic at the principal regional airports, while avoiding the provision of excessive new capacity. The Government's view is that this policy "should help to develop air transport op a firmer base throughout the UK and, by providing a wider range of services and more frequent connections, to attract international traffic directly to the regions, where an important expansion

regards as a wider range of services has not been spelled out in detail. But there is no doubt at all that many people in the regions are deeply unhappy not only about the Government's policy, as out-lined in the White Paper, but also about the way in which Department of Trade and CAA. is implementing its policy of encouraging regional air traffic.

Most foreign airlines serving the UK not only insist that London is their focal point, but also that in the area they prefer, even insist upon, Heathrow rather even than Gatwick. It would appear, therefore, that if the Government wishes to see more international services by foreign airlines at regional airports it will have to stimulate such developments by making it either financially attractive for them to move to those airports, or develop through its various international bilateral air agreements a policy of seeking more air services to and from the regions, in the same way that it is now trying through bilateral discussions to get a greater foreign airlines' of Gatwick as opposed in Heathrow. Some foreign airlines already use the major regional airports, but they will only expand their operations when the traffic itself is demonstrably there, and not the other way

One of the basic problems that has bedevilled the development of regional air services in the UK, both domestic and just narrowly missed this figure, international, has been lack of traffic to sustain regular scheduled operations medium to large aircraft. Frequently in the past, an ostensibly economic service between a UK regional airport and an airport on the Continent lias been started, but has foundered because the anticipated volume of traffic did not materialise. What now appears to be happening, however, is services with the smaller, more types of aircraft that are becoming available, very often six to The fact that last Chieftains or Embraer Bandelthere, growing in aircraft and flect size as the traffic grows,

in the years ahead, taking some at least of the strain off airports But the other major problem remains lack of capital for the start of such operations, and the Association British Chambers Commerce recently suggested that the the Government, through the Government, as part of its overall airports policy, should encourage such services by in-

troducing a subsidy scheme for new air services. This financial aid would be given to small airlines specifically starting operations from regional airports. The aid would be of strictly limited duration, as the intention is not to provide permanently uneconomic air services but aid for airlines in the difficult and expensive start-up phase. Clearly, in order operators would have to demonstrate their competence, and it would be operated in conjunction with civil air licensing policy. The association argues that it might even be cheaper in the long run to have such a tion of licence applications. scheme, than to embark upon the development of a major new airport In other parts of the UK, the

The dedecision now taken is to shelve for the time being the plan to build a second runway, and to press on with the strengthening and lengthening of the existing next spring, and will be undertaken during the summer that the nirport remains fully operational during the day. It will continue into 1980, until completed. On completion, the existing runway will be 10,000 In this way, it is hoped that tion of Yorkshire and Humber- through the 1980s. The second way, Tiree and Wick) traffic

Just what the Government regional air services will evolve airport of their own, and that as a long-term probability, how-"any national airport policy ever, and it is envisaged that, should encompass a major subject to planning and other consents when the time comes, work on it could begin some time in the mid-1980s, so that it could be available for use by the late 1980s or early 1990s, Merseyside at the recent de-depending entirely upon traffic cision of the CAA to reject demand. This second runway would be only about 9,000 ft long, instead of the 10,500 ft envisaged originally.

> But various other improvements to the airport are also the perind immediately ahead, including the provision of airbridges and waiting lounges, the construction of additional aircraft parkstands and hangars and other international civil aviation. At present, the catchment area of the airport is the whole of Central and Northern England, including some 25 per cent of the total population. This means that 20m people live within three hours' drive of the airport, and nearly 3m live within Greater Manchester.

In Scuttand, airports development has several facets. First, of the North Sea oil and gas development and production,

Secondly, there are the various "Highland and Island" aerodromes, which have for years been kept open purely as a social service for the small populations in the areas they serve, and which tapart from Sumburgh, which is now virtually in a class apart), are in this way, since the expansion anticipated in the years ahead is unlikely to enable them to reach economic selfsufficiency. These are the airports at Benisecula, Inverness, Islay (Port Ellen), Kirkwall, Stornoway. Tiree and Wick. Collectively, these aerodromes (including Sumburgh), bandled 99.205 passengers in 1977-78, a rise of 16.9 per cent over the previous year, but of this total. Sumburgh alone accounted for more than 27,000, a rise of 61,2

Thirdly, there are the three hig "Lowlands Airports," of Glasgow. Edinburgh and Prest-wick, which have special development problems of their own, partly stemming from the Glasgow, Edinburgh and Prestactual and anticipated traffic and Edinburgh to bring up to partly from and internal Scottish pressures for airports. a change in the distribution of 3-To keep Prestwick open for traffic between them, torically. Glasgow and Edinburgh have been short-haul domestic and international airports, with the long-haul scheduled and charter traffic, latter airports. primarily across the North Atlantic, being handled by

Prestwick. cargo terminal, the eventual de- Edinburgh, and especially the velopment of a new passenger latter, anxious to have transterminal, and additional aircraft atlantic flights to and from their own cities, so as to avoid the buildings. Dictating these de-velopments will be the growing BAA which owns all three airimportance of Manchester to ports, is aware of these pressures, and has already spelled out the options, as it sees them.

1-To maintein the present position, which would be the cheapest, involving expenditure of only about £12.5m at Prestwick to ensure that its facilities can keep pace with traffic growth.

2-To shut Prestwick for transatlantic flying, keeping it open only as an airfield for private flying, and for the Scottish Aviascheduled and charter trans-atlantic flights to Glasgow and the standards of transatlantic

His- scheduled transatlantic flights. but redistribute its extensive long-hauf charter operations to Glasgow and Edinburgh, which would involve spending some £37 in new facilities at the two

Opinions

Although the BAA has sought a consensus of opinion on the best of these options, it seem likely that the matter will remain open until the proposed Scottish Assembly, to be created when devolution occurs, has been given an opportunity to consider the issue, as it is bound to want to do. But, here again, the decisions cannot be left too long, for the sheer pressures of traffic growth will require the outlay of substantial sums in the years immediately ahead on new developments, especially at Glasgow Airport, and the precise nature of the traffic distribution between airports will need to be settled before such outlays are

More congestion in Europe

IN TERMS of total air traffic, lem faced by airport authorities airliners. corner of the U.S. and the Chicago area. It is some of the husiest air routes in the world, such as London-Paris, and in Heathrow it has the busiest international airport in the

Although some U.S. airports outranked Heathrow in 1977 in terms of total passenger traffic handled - such as Chicago O'Hare with 43.4m, Atlanta. Georgia, with 30m, and Los Angeles at 28.4m, compared with Heathrow's 23.4m—this was solely because of the heavy volume of purely U.S. domestic air traffic they handled.

When measured strictly in terms of international passenners. Heathrow's position is dominant at 20 6m in 1977, and it is closely followed by several other major European airports. handling international traffic in 1977. Kennedy, New York, followed Heathrow, with 10.7m tout of a total of 22.5m), and was succeeded in turn by Frankfurt (9m), Washington Dulles (8.6m), Amsterdam (8.4m), Paris Charles de Gaulle (7.6m), Paris Orly (7.5m), Copenhagen (6.8m) Rome Finmicino (6.4m) and London Gatwick (5.8m).

Factor

Another important factor to he remembered when comparing European air traffic with that of the U.S., is the relatively high proportion in Europe of "true terminating traffic"—that is, passengers actually starting or ending their journeys at a given alroart, rather than "interlining," that is, connecting with other airlines for onward journeys. At Heathrow, 85 per cent of all passengers are "true terminating" passengers, enmpared with 75 per cent at Kennedy and Paris Charles de Gaulle, 70 per cent at Rome, wtween 60 and 65 per cent at Frankfurt, Zurich and Copenrazen, and only 50 per cent at Chicago O'Hare and 30 per cent

point about these statistics is that they illustrate

Western Europe is one of the in Western Europe-a heavy busiest and most congested air volume of high-density intertransport regions of the world, national short-haul terminating airports. Throughout Western ranking with the North-Eastern traffic, seeking to move at peak Europe, many of them are shut also the times at which many long-haul flights arrive at European destinations. It is in the short-haul field that much of the future air traffic growth is expected to occur, as fares are steadily reduced. The pressures on airport capacity are already acute and are bound to worsen as the current traffic expansion rate of about 8 per cent a year continues into the 1980s.

> There is no doubt that many of the improvements now being planned or made to the structures and facilities of Western European airports are necessary, for many of those airports were first built soon after World War Two. They have served the development of civil air transport well for 30 years or more, and now have to be brought up to the standards required to cope with a new generation of first-time air passengers in the era of mass air travel that lies ahead.

> But there are considerable difficulties. In Western Europe. populations are denser, cities and towns are bigger and closer together, and airports have historically evolved much closer to city-centres than has in many cases subsequently proved desirable for environmental reasons of noise and pollution. Often, airports that were originally deliberately sited well away from cities have subsequently hecome surrounded by the uncontrolled growth of residential and industrial areas.

This has had two main consequences. The first is that the environmental pressures on airport authorities have been much more severe than in other parts of the world (outside North America). It is largely from the densely-populated urban areas of Western Europe and North America that the greatest hostility to airports and air transport in general has been generated, as a result of which political constraints have been, and are still being, imposed on the siting, sizing and operational capacities of airports, and lie debate. on the noise and pollution emis-

These constraints are having a substantial impact upon many hours of the day which are often at night to jet airliners, rendering unusable or severely limiting the use of resources that have cost in some cases several hundred millions of pounds to construct. At the same time. many millions of pounds are having to be spent additionally on noise-reduction and anti-pollution activities of various kinds, thereby adding to the overall expense of operating the air-

The second main consequence

is that many airports are now physically unable to expand beyond their existing boundaries, so that all the new facilities required to take account of the anticipated expansion in traffic through the 1980s and beyond are having to be contained within existing airport perimeters. This in turn s resulting in developments being concentrated upon improving and enlarging terminal huildings, improving access to and from city centres, and in the enlargement of aprons and in the improvement of landing ground-movement aids, rather than in the provision of additional runways or even of runway extensions. It is significant that in the few cases in Western Europe where new airports, or additional runways at existing airports, are either being undertaken or planned, they are all subject to intensive political and environmental debate, placing considerable

authorities and airlines alike. A particular example of this is the current situation in the UK, where the need to expand facilities at airports in London and the South-East of England to take account of anticipated traffic growth in the 1980s is heing delayed by the Government-initiated Public Planning Inquiry into the proposed fourth at other airports, such as Gatwick and Stansted, will also be subject to similar planning objections and subsequent pub-

Nightmare

quickened.

But for long-haul operations, where an airliner has to plan a flight through a number of airports several thousands of miles apart, each of which has its own curfew, made more complicated the inevitable time-zone changes involved in the journey. the problem of scheduling can become almost a nightmare. This is why increasingly longdistance flights are leaving, say, Heathrow, in the middle of the afternoon, or arriving there at other inconvenient hours. In the UK. the British Airports Authority has been offering for some time a system of differential landing fees, to encourage airlines to make more use of the off-peak periods, so as to improve runway utilisation and spread the operational burden of air traffic control and handling more evenly through the available hours of the:

working day. It is quite clear that as trafficexpands in the 1980s, even with the introduction of bigger air; liners carrying more passengers per flight, this kind of technique will have to be used increasingly to ease the strain not only on runways but also on terminal buildings and other facilities. It is probable that, if adopted widely throughout Western this technique of Europe. spreading the burden more evenly throughout the day could enable airports to cope with a clearly the measure of the prob- sions of each new generation of straints, the airports authorities substantial proportion of the

Worldwide demand for airport development

AS THE MODEST civil engineer established for themselves an or the extension of a busy run- £1.5bn international complex at from Costain put it: "There's excellent reputation for high really nothing difficult about standards and on-schedule comairport construction. All you pletion of airport facilities have to do is bring your resources to where they are needed from the nearest possible point and plan well enough airport developments in recent ahead for them to arrive at the right time."

in essence, his remarks are perrect, although any of the major civil engineering contractors who make up the international league of airport construction specialists will be quick to add that rarely do events work out quite so per-

construction or additional development of an airport requires huge resources in terms of finance and manpower and some of the largest UK contractors and consulting engineering practices can today provide a service which involves the complete package, from preliminary studies and feasibility reports through design and construction to advice on operation and development. Their skills can be required

to construct a desert airstrip or a new multi-million pound international complex and the successful completion of a job often represents the end of a major civil engineering challenge in which the elements and a lack of local raw materials can represent major problems. British contractors and consultants have, as in other branches of civil engineering.

around the world. British companies have been involved in many of the major years, from Hong Kong to Khartoum, Singapore to the Seychelles, the Middle East and South America. The contracts have involved the removing of mountains, the construction of artificial promontories and the need to work in searing temperatures or torrential rain forests.

Construction of an airport complex forms only a part of the overall project. Consultants comprising a team of airport planners, architects, economists, operational specialists and mechanical and electrical engineers are brought in to mastermind complete projects and undertake studies on every aspect of their operation, providing forecasts of aircraft, passenger and freight movements, land use master plans, proposals for additional facilities and regional planning

studies. The airport contractor can face two fundamental types of problem; the creation of an entirely new complex-invariably involving extensive ground works in difficult conditionsor the expansion and modernisation of existing facilities. Whether the projects involve the reclamation of swampland

of the same magnitude.

From the very beginning of an airport project, the design and construction team is under tralian contractor gives some pressure to perform well and complete on time, for an airport, as much as any other major civil engineering project, is a reflection of the economic strengthan aspirations of a country or region. The decision to construct or expand air terminal facilities represents too a major item of economic and social Dianning and it is inevitable that any such development becomes a matter of prestize for

the client. Difficulties

The sheer logistics of an airport development can be astonishing. Millions of cubic metres of rock may have to be removed or acres of mud replaced with concrete. Invariably, few of the essential raw materials are located close to site and have to be transported substantial distances before they can be used. Rarely can supplies be neatly ordered by telephone and often the contractor must allocate as much time and as many resources to securing suitable materials as to any other aspect of the project.

Communications to site can poor or non-existent and often the contractor is involved in laving down at least a proportion of the basic infrastructure required to link a new air terminal with surrounding centres. In the past decade, much of

the airport construction business has been centred. naturally enough, on the Middle East where new wealth has generated large and growing volumes of passenger and freight traffic and where regional political considerations have ranked alongside economic necessity as a reason for several airport terminal developments.

UK contractors and consultants have been to the forefront of this type of work in the region although the volume of husiness has now begun to decline as major airport complexes are completed and the competition for the work available becomes more intense. Certainly, many of the UK airport specialists are currently handling a fraction of the work on their books live years ago.

Major contracts are still coming forward, however, like the project to build a new

way, both can create organisa- Riyadh in Saudi Arabia, or the tional and technical problems £110m plan to construct four new airports in the same country for the royal family. The fact that the latter was won by an Ausindication of the strength of current international competiuon for such work.

While work on new airports in Saudi progresses-complexes equal in size to that at Riyadh are planned for Jeddah and for a new location between Dhahran and Jubail in the eastern province-Saudi is also spending another £1.5bn un improving its existing major international air terminals.

Elsewhere in the Middle East, a new international airport is being built in Iran, south west of Tehran, at a cost of over £500m. The complex was due to open next year but there have been delays.

A new airport is also being huilt in Baghdad to serve Iraq and modernisation and expansion works at other air terminals within the country are now being carried out. In nearby Kuwail. reconstruction work at the country's major international airport is almost complete and due to open soon. Duplication of airports is

notorious in the United Arab Emirates, which has provided large volumes of aviation associated work for international contractors and design teams, many from the UK. There are now four major airports within the Emirates-at Abu Dhabi, Dubai, Sharjah and Ras al Khaimah. A new airport is planned for Abu Dhabi and contracts worth over £45m have already been lct. Yet a further airport may be built inland at Al-Ain. A second international airport is

also likely in Dubai. A new terminal has recently been completed and opened in Sharjah, work is almost compicted on a new complex at Damaseus in Syria and new facilities in Jordan near Amman should be open next year.

As with other types of construction; the Gulf has provided more than its fair share of airport development work in the past seven or eight years.

. For the future, a growing percentage of contracts seem likely to involve the tricky task of expansion to existing facilities and competition to secure this type of work is set to

Sundstrand ATA-II Automatic Terminal Announcer System ...lets your fingers do the announcing

As easy as dialing a telephone number, you can make multi-language arrival and boarding announcements over your existing public address system using the Sundstrand Automatic Terminal Announcer System. The system offers pre-recorded announcements that are sharper, clearer, and more uniformily professional than a live announcement system in any airport

All you need operate are seven numbered switches and one pushbutton. Out will come the announcement of arrival, preliminary boarding, boarding, or final boarding at any gate and for any flight you wish. A single person at a central location is capable of controlling announcements for as many as 1000 flights using up to

The identical announcement can be made from any number of different locations, such as ticket counters, information desks, or gate stations; and in as many languages as may be required. System electronics, housed in a concealed location, automatically sort out instructions from different locations and arrange them for announcement in proper order.

One Professional Voice Does It All

Your announcements can have the quality of TV and radio broadcasting because they are all pre-recorded in one or more languages under controlled conditions in a professional sound studio by a professional "voice." After that, the "voice" is yours, working for you as often as you wish to activate it, day or night, from one location or a hundred.

Passenger traffic is visibly improved when the "voice" arrives. Passengers suddenly find they can understand the words, even above crowd noises. They therefore move through the terminal with more confidence and greater efficiency.

The System Grows As You Grow

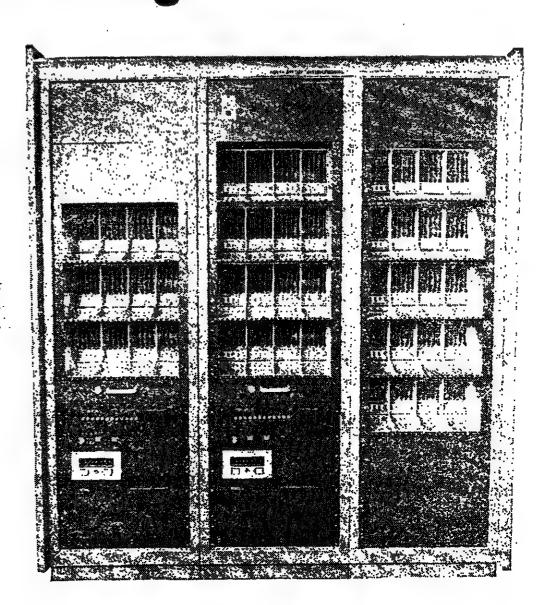

In its basic, simplest form, the Model ATA-II system consists physically of three units: the Announcement Selector, a Control Unit, and a Tape Transport.

You can expand its capacity by simply adding Selector Units and Tape Transport (the more announcements you wish to choose from, the more tapes you'll need).

Provision has been made in the design of the units for expanding announcement functions to other areas as the need arises by simply adding to the system - you "build on," you don't replace. Your investment is thus secure and ready for growth into tomorrow.

Install It In Place Of Your Microphone

If you now have a microphone input to the public address system, you need only plug in the ATA-II automatic terminal announcer in its place. The ATA-II system is capable of activation from a central location or from any of numerous gate locations.

AIRPORTS AND AIRPORT SERVICES VIII

Equipment makers in export bid

FIRST tentative step towards a British national policy for developing the export potential of airport equipment manufacturers was taken by the National Economic Development

Council last month. A meeting of manufacturers with airport interests, under the chairmanship of Sir Raymond Brown, was held at NEDO in develop a proposal for a national products. Sir Raymond has been studying for some time the scope for closer co-operation between nationalised industries and their suppliers in developing export markets.

His latest work, with Britain's airport equipment suppliers, was prompted by a report on "Design and Export" from the Engineering Economic Development Committee, part of NEDO, which was published in

The report outlined the potential importance of overseas airport contracts for Britain's civil engineers, but it was left to Sir Raymond to develop the theme with and on behalf of the equipment suppliers.

The work on the national catalogue is still very much at an early stage, but the broad involved have now reached a stage where it must be decided which national body should take the catalogue pro-

NEDO may invite the Trade Department to prepare the airport equipment catalogue and further developments may be expected in the New Year.

Grouping

In the meantime, Britain's airport equipment companies have already taken steps to organise, rationalise and unify their attempts at winning export markets through a central grouping of interested manufacturers.

potential prize is enor-There are over 40 major development programmes now under way in the world outside Africa, which is accepted as one of the jargest and fastest growing markets. The total world airport de-

velopment programme for the next decade is estimated to be worth £30bn in civil engineering work and all the associated electrical, mechanical and electronic work for a total of up to 60 airports. Airport equipment accounts for up to a quarter of the total development costs of an international airport

The British Airport Equipment group was formed in July two years ago to capture a portion of this market by pooling the services and capabilities of a range of suppliers.

The corporate members of the group are deliberately chosen to be complementary. rather than competitive, and Mr. Alan Buckley, chairman of the BAE Group said that there were no overlaps of manufacturing interests, unlike organisations in West Germany and France where more than one representative of a manufacturing sector is represented in similar alrport equipment

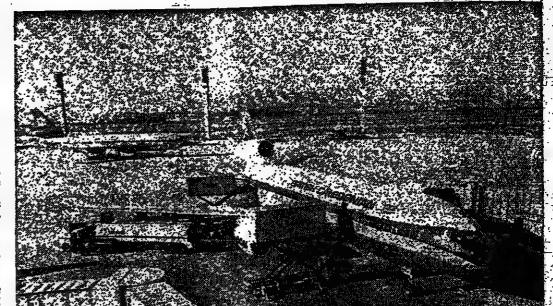

The BAE group has 11 members, with individual company turnovers ranging from £500,000 to £65m. The total turnover last year was £100m, with most of the business won in overseas markets.

Mr. Buckley said the existence of the group as a central marketing organisation aimed at capturing package contracts from overseas had attracted £2m worth of business, so far, a small proportion of total turnover, but business which would not have been won without the group approach.

Companies which contribute to the range of equipment offered by the group include Albar Engineering of Keighley. which supplies baggage and freight trailers and stairs for Briton Handling airctaft. Systems of Aylesbury operates an overseas maintenance and spares service for aircraft, vehicles and airport mechanical handling systems; Reliance-Mercury of Halifax supplies aircraft tugs and baggage tractors; Sorting Systems of London manufactures passenger and baggage check-in, departure and arrivals handling systems and Weldwork Cargo Systems of Hounslow makes static cargo systems, mobile equipment, container dollies, pallet trailers, slave pallets, contour gauges. mobile weighing equipment and

Terminal Apron Planning Associated of Wargrave, Berkshire, provides the group with its main consultancy work in airport and ground support equipment planning.

The group has so far concentrated on the markets of the developing nations, where much

A "B Cal" DC-10 jet at the new international airport at Rio de Janeiro, where a second runway was opened last month.

sirport hardware to cope with same period. larger aircraft. The greatest. successes have come from the Commonwealth, where there are traditional commercial ties. In Europe and the U.S., competition is fierce and British equipment-makers have tended to opt for markets where success is

more assured. There are exceptions, however, and Reliance-Mercury has won trial orders for four baggage tractors for use by TWA, beyond 1988. Pan Am and North Central Airlines in the U.S.

But mechanical handling equipment, one of the BAE's main areas of interest, is only a part of the catalogue of advanced hardware needed for

International Aviation Organisation has produced a document on the civil aviation market in the next decade. It lists 10 categories where there is a potential for

maintenance and fuel requirements, the main sectors are airport construction, air traffic ground control systems. handling systems, training programmes, and general aviation requirements covering light passenger aircraft. The handling systems are expected to be worth £2.4bn over the next decade.

suppliers in the airport communications field is Cable and Wireless. The company formed a specialised Airport Services 1974 Division in 1971 and has been successful in a range of overseas contracts, including an order for equipment to expand sirport equipment supplier and computerised ... sireraft departure control system at X-ray technology to conveyor Hong Kong's Kal Tak inter systems. national airport. The contract in partnership with Cathay Pacific Airways, and involved. the LOPAC load optimisation and passenger acceptance control system.

The equipment is designed tospeed up passenger and cargo handling and to ensure that the aircraft are correctly balanced and load limits not exceeded.

Radar links, using microwaves or co-axial cables, radio mavigation aids, public address systems, and closed circuit television systems are also supplied be spent on civil engineering by British airport equipment

lennched a new spe five radio channels and five tele-

phone lines simultaneously. Other equipment vital for international surports includes X-ray security inspection systems Pantak (EMI) is one of the growing band of companies entering this field. The company was set up to develop the market for radiographic prototype systems for luggage and cargo inspection were tested by the Detence Ministry five years ago. The first exports of the Pantak squipment for

worked with International Aeradio, another major British consultant, on the application of

The move is typical of others growing automation and accelertion of all aspects of airport development. Increased throughput will become an essential part of airport development, as airlines step-up re-equipment programmes, involving pover 2,700 new aircraft over the next decade. Almost three-quarters of these aircraft will be used to provide extra capacity to meet growth into the 1980s. Their existence will provide further prosperity, and competition, for Britain's equipment companies. Lynton McLain

WEIGHING IS FAR TOO IMPORTANT TO BE LEFT TO CHANCE

Sobankonthename you know you can trust

Nothing is more vital than accuracy and dependability when weighing for air. After fifty years of weighing passengers' bags, cargoes and aeroplanes we know that only too well.

So we design and build our airport weighers to be more than just ordinary run-of-the mill scales: Electronic or mechanical our baggage weighers, transit-shed scales, weighbridges, scissor-lift weighers are custom-engineered to meet the toughest airport duty and still weigh to pinpointing accuracy every time - time after time - without fail This is the performance that has made Avery weighers standard equipment in the world's

airports. You can see them at work in nearly all the

major airports in the UK and in:

Airport

Our claim to fame isn't our size, or even the number of

international connections we offer

In fact, we actually specialise in being second to Manchester's Ringway Airport.

Because we are, we can afford to give more time and attention

to our 'customers'. The kind of attention that is impossible

when dealing with thousands of people each day.

On the other hand, we do provide an essential daily domestic service to most parts of the U.K. including five flights each day

to and from London.

If you've got business in or around Merseyslde—make it your business to fly through Liverpool Airport, you'll be amazed by the difference being number two can make!

the briendly one

The Financial Times is planning to publish a number of Surveys in 1979 on the Aviation and Aviation-related Industries.

The titles are listed below:

AIRLINERS - THE NEW GENERATION February TORNADO April **BUSINESS TRAVEL** June **AEROSPACE** July SATELLITES August **AERO-ENGINES DEFENCE EQUIPMENT INDUSTRY** October ARAB TRAVEL & TOURISM October November LONDON AIRPORTS December ARAB TRANSPORT

A Survey on BUSINESS & LIGHT AIRCRAFT may be added to coincide with the Cranfield Show.

A full list of Surveys for 1979 is available on request.

Brief editorial descriptions of these Surveys are available if required; full editorial synopsis will be available three months before publication.

For further information and details of advertising rates please contact

Neil Ryder, Financial Times, Braken House, 10, Cannon Street, London EC4P 4BY Tel: 01-248 8000 Ext. 520

Ken Newspeak: a Christmas report

WHAT WOULD George Orwell for so long that it is now time think of the world with just to do something else? And are ever five years to go to 1982 you not aware that conviction On many subjects we can only has never yet been produced by guess. But on one we are on an appeal to reason, which only solid ground. In the appendix makes people uncomfortable? If to his book he outlined the principles of Newspeak, "the official language which had been devised to meet the needs of Ingsoc, or English Socialism." In our progress towards Newspeak, he would surely have said that we were well ahead of

People who read "1984" To persuade others to do some time ago often forget that nothing, some rhetoideal de-Orwell did not expect Newspeak vices are handy. One example to have hally superseded is the principle of the dangerous Oldspeak (or Standard English, precedent, "Every public action as we should call it) until about which is not customary either is to have heally superseded Oldspeak for Standard English, as we should call it) until about the year 2050. He himself wrote: "In the year 1984 there was not as yet anyone who used Newspeak as his sole means of communication, either in speech or in writing." He sadiy underestimated the pace of evenis. But if we are to understand what has happened, we must go back a bit. For the language of Ingsoc had a conservative predecessor, outlined in a guide for the young academic politician first published in 1908. Entitled

1984" is a primer on Ingsoc, Microcomographia Academica (recently reissued by Bowes and Bowes) can be regarded as a primer on "Ingcon," Cornford explains patiently to his reader: You think (do you not!) that you have only to state a reasonable case, and people must listen to reason and act upon it at once. It is just this conviction that makes you so impleasant, There is little hope of dissuading you; but has it of "h is far better that all occurred to you that nothing reform should come from with-

Microcosmographia Academica, it was written by F. M. Cornford

as a warning to the young identist to mend his ways. If

you want to move them, you must address your arguments to prejudice and the political motive."

The rest of Cornford's book furnishes the reader with arguments for doing nothing—and thereby being on the winning

wrong, or if it is right is a dangerous precedent if follows that nothing should ever be done for the first time." This should be enough to stifle a proposal; but if necessary the fair trial argument can be introduced. Give the present system a fair trial." If pressed further one can always appeal to the principle of unripe time—"the time is not ripe" for any apparently sensible change.

Buf even if reform has to be considered, the battle is far from lost. The Ingeon statesman can take a leaf out of the radical book, and say: "The present measure will block the way for a more sweeping reform." Or he can use the opposite objection and say: "If we grant this, it will be impossible to stop short of something more sweeping. Taken together these alternative arguments are known as the wedge, driven into your opponent's case. The point is

that either way you win. After all this formidable prinoutly it is hardly necessary for Cornford to explain the use is ever done until every one is in." or the moving of an Many people who talk loosely convinced that it ought to be alternative proposal, let alone about Newspeak have not done, and has been convinced prevariention. calling your grasped its basic principle set

opponents' schemes "wildcat" or out very very clearly on p.241 "talking slowly and indistinctly, of the Penguin edition of "1984": at a little distance from the point." But if all else fails there is squaring, best carried on at lunch.

The author of Microcosmographia Academica had his tongue in his cheek, simply wanting the young rebel "to acquire just enough worldly wisdom to save other people's toes." But his handbook was at once selzed upon with delight by the devotees of Ingcon who were introduced to it. Indeed. a former chairman of the Bow Group, told me that Cornford's little volume had been his only handhook in the conduct of meetings, and it had never let

A 'non-person'

Orwell's Newspeak lies. Both were meant as warnings. Both have actually been seized practical guide to action. The difference is that the academic politics of Cornford required mercly a stretching of the English language, while Orwell's system required a new vocabu-

But if you think I am exaggerating, when I say that the words and thoughts of Newspeak are nowadays gleefully, read the accepted words of Mr. Leslie Moody, the general secretary of the Civil Service Union about Professor David Donnison, the chairman of the Supplementary Benefits Commission, who he said has become " a fully registered nonperson, grade one." His crime was to suggest an investigation of charges of brutality in a reception centre for the home less, thereby offending simullaneously Incoor and Incom.

(other than Ingsoc) impossible.
Once Newspeak has entirely replaced Oldspeak a heretical thought would be "literally unthinkable, at least so far as

thought is depicted in words." For this purpose the reduc-tion of vocabulary is a main There are three vocubalaries in Newspeak, the A one for everyday life, the B one of words deliberately constructed for political purposes and C one of technical and scientific words. The C list does not appear very novel; the main thing is that it was split so that a scientific worker in one field would know very little of the words in another, "There was no vocabulary expressing the function of science as a habit of mind, or a method of thought,

irrespective of its particular branches." One big change in the B list of everyday words was the com-plete interchangeability of any part of speech. But even Orwell did not guess that fairly low level U.S. political aides would by the 1970s be talking of the need "to tough it out." British journalists have been following Orwell more slavishly. Long before 1984, let alone headline writers had abolished the word "cut" in favour of "knife," were forming adjec-tives by adding "full" to nounverbs, and adverbs by adding

wise," exactly as recommended. Orwell quotes on page 31 the following internal departmental messages, not completely in Newspeak, but containing containing Newspeak words.

"17,3,84 bb speech reported africa rectify quarter 83 misprints verify current issue 14.2.84 miniplenty malquoted

of the Penguin edition of "1984": ing on Financial Times tele- point during the passage of my to make all modes of thought printers the whole time—five speech on the lowest paid." years ahead of schedule. Of course the pride of Newspeak was the B. political,

vocabulary. The words in it were all compound ones such as "crime think" or "thoughtpol" (thought police). One had to have a good grounding in Ingsoc to appreciate a word such as "oldthink" and the ranges of words cancelled by its existence. Put simply, "oldthink" cancelled all thoughts connected with objectivity and rationality, everything to do with liberty and equality. The only way of translating the Declaration of Independence into Newspeak was by the one word "crime-think."

The most advanced student

of Newspeak in Parliament is Mr. Roy Hattersley, who takes to it as a duck to water. He will sanctions and blacklists. When pressed in debate by Labour rebels to say what he called these weapons, his first attempt was "discretionary action," but the real Newspeak words, as he soon realised, were "help for the lower paid" "counter-inflation." Orwell warned that we are still at an early stage where Newspeak need more words than Oldspeak. Mr. Hattersley illustrated this. When asked by Mr. Norman Atkinson when he would support a return to col-lective bargaining. Instead of the Oldspeak "never," he had

to resort to: "The orderly return to free collective bargaining of course remains our aspiration and remains the policy of the TUC, but I think that my Hon. 19.12.33 forecasts 3 yp 4th Friend will agree with me that even the TUC believes that the return to free collective bar-gaining needs to be qualified.

It is because he believes that. I

Sir Anthony Rubinson's re-port (December 6), "Soviet planners cross their fingers and hope for growth," refers to Mr. Brezinge's speech to the plenery session of the CPSU central committee on November 27, and indeed quotes some of the things he said. But Mr. Robinson leaves out some of the . gloemier of Mr. Brezhnev's

When Mr. Brezhney says that Twe have not yet succeeded in statements. stopping the process of dissipating capital investment on too many projects," he then went and brought before the world on, "the volume of uncompleted uninstalled equipment worth several thousand million roubles iles uselessly in warehouses.

He referred to "the losses of grain, potatoes, vegetables and fruit," to the fact that "many farmers do not yet have pig breeding and delry farms, and that their number is unfortu-nately, on the increase." He said that none of the new plants—envisaged in the pro-gramme adopted in 1973. "In anticipation of the : smaller growth of manpower resources in the 1980s, for creating a machine-building base for the purpose of greatly reducing manual labour." has yet been out into operation. "How," he asks, "are we to explain the fact that we have been unable for a long time to eliminate the bottlenecks, that prevent us advancing faster, more dynamically?" He goes on: "There is in increasingly keen awareness of the need for a deep and comprehensive analysis of the main problems of the develop-

ment of the national economy." I have been reading the verbatim reports of Soviet speeches in the BBCs summary of world broadcasts for many years, but this is certainly the most despairing and un-varnished of all those on economic marters that I have ever read coming from the top-

Mr. Brezhnev also said in the same speech that "the country's defence capabilities are being maintained at the proper level." Must we not suppose that the bulk of Soviet management and technological talent is going into defence? And if so, does this not have implications for Western arms control policy, as well as for Western economic towards the Soviet

of the great disappointments of Mr. Carter's first months came when his Administration lost its collective nerve over the arms control and disarmament proposals Mr. Vance took to Moscow in March 1977 (and which indeed Mr. Carter himself had repeated at Carter himself had repeated at the United Nations General Assembly in October of that year). Both the United States and the Soviet Union need, for economic reasons, to reduce their government spending, particularly on such unpro-ductive expenditures as is going to be the occasion rather for expanding armaments in fields not covered by transport supplementary grant the agreement, than for cut.

meeting to sign anything as punished. On the other hand, insignificant as a SALT II South Yorkshire is to suffer for agreement? Can they not take failing to put bus fares up. National Semiconductor is now entering the computer market with a range of sophisticated system-level products. This step is not only natural and logical but inevitable.

For the past decade, we've been a leader in creating the technology that makes computers work.

Two years ago, we unveiled our first advanced system computer. To date, over 150 of these IBM 370 compatible systems have been installed in fifteen countries. We are now shipping worldwide more IBM 370 compatible computers than all other competitors combined.

And, by applying current semiconductor technology and production expertise, we deliver better performance at a lower price than other suppliers.

By making softwarecompatible hardware, we protect a customer's investment in standardized software.

We are the world's largest independent manufacturer of IBM 158 and 168 add-on memory and we have already started to manufacture for 303X Systems.

If you would like to know more about our current product range please complete this coupon and return

register at the close of business on March 14, 1979.

very much more appropriate development which the directors C. H. Pearce believed, in turn, would be more profitable than the one originally set to sustain approved, he stated. Industrial developments at Weston-super-Mare, Evesham, Portishead and some sites in Bristol had now been completed performance

Present management accounts at C. H. Pearce and Sons, builder, contractor, etc., point to full time profit for the current year at least equal to that seen in 1977/78 when the pre-tax surplus was a record £0.81m.

Mr. Gordon Pearce, the chairman, reporting this at the annual meeting, said that he feared the coming year would not be a prosperous one for the construction industry generally as, in the revaluation of further classes order to prevent inflation, the of assets during 1977-78 (includ- Government would reduce public Government would reduce public ing those of Airco revalued at spending by cutting expenditure

the date it became a subsidiary) in the building industry.

was £5.9m.

in taxable profit it reported by Pethow Holdings, maker of gen-erator and welding sets, for the sales growth did not materialise and turnover was maintained at £9.97m, against £10.01m, with export content dipping £0.49m

The lack of sales growth was caused by unexpected canceliations and a decline in orders re ceived resulting from the sudden eral overseas markets. This reversal, which occurred without warning towards the end of the half year, had an immediate effect on shipments and will have a significant effect on sales for the second half Mr. J. Bird, the chairman, states.

The second half has not begun well, although October is traditionally a poor month and November bore all the cost of the redundancy programme. The un-certain state of the market makes forecasting extremely difficult, but in the absence of any marked change in external circumstances indications are that the results for the second half will show no more than a modest profit he

For 1977-78 the surplus was

alread from £2.79m to a best ever f3.14m

The net interim dividend is effectively held at 1.5p per 10p share and, in the absence of unforeseen circumstances the directors expect to pay a final at the same level as last year's adjusted 2.8065p. There is also an additional payment of 0.042675p following the change in the rate of ACT.

Nigeria has been the group's largest overseas market for a number of years, but its

The group expects to maintain its level of results for the year, but any improvement depends upon a recovery in demand for steel and a period free of industrial disputes affecting major customers, the chairman says.

DIAMOND STYLUS

OFS needs \$200 gold to maintain profits

BY KENNETH MARSTON, MINING EDITOR

MINING NEWS

From turnover of £11.29m against £9.19m, profits before tax the launching of South Africa's high-grade Orange Free State from £347,854 to £408,918 in the gold mines in the 1950s. Over the past 25 years much of their six months ended September 30, more easily accessible payable ore reserves have been mined out and these days a good deal Earnings per 25p share on increased capital are shown at 2.59p (4.406). The interim divi- of the ore tannage has to be dend is 0.7p, against an equiva-lent 0.35p—last year's total was lent 0.35p—last year's total was equal to 1.318p from pre-tax and other remnants from areas

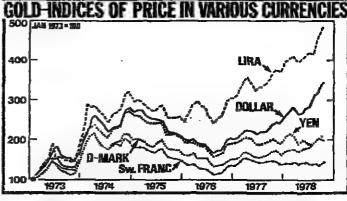

This means lower productivity First half tax charge is £212,637 (£180,884) leaving net because of the difficulties of mining pillars; higher costs and a dilution of ore grade; together with productive time lost by profits at £196,281 against £186,970. The group processes steel and designs and makes men who have to travel further to the work faces. Fortunately, Mr. A. J. Rowe, the chairman, these adverse factors are being balanced by higher gold price says intense competition for a as the chairman of the Anglo
American Corporation group's
OFS mines point out in the
latest annual reports. share of the market for the group's products has had an effect on prot margins. The additional capacity available at the Oldbury

As far as the outlook for gold is concerned, the chairmen take a generally confident line. They point out that industrial demand this year should again be in the region of 1,200 tonnes which is more than South Africa's output of around 700 tonnes and that of the Soviet Union which is estimated at some 400 tonnes. price for gold has not dampened industrial demand, partly because the price has not increased much in terms of stronger currencies.

On the subject of by-product ranium, no further rise is thought likely in the current spot price of about \$43 per and for the near-term because of the anticipated flow of new supplies from Australia and Canada coupled with slippage in nuclear energy programmes. But It is suggested that shelved nuclear energy programmes could be stimulated by the latest

increase in oil prices. Meanwhile, all the mines with exception of President Steyn, are facing some reduction in ore grade and gold output in their current financial years to next September. In order to maintain the past year's record level of working profits Free State Geduld will need an average gold price in excess of \$220 an ounce. Capital expenditure is expected to remain at a high

level of R43m in 1978-79. For Western Holdings the required gold price is \$210, fore- gold output in 1978-79.

capital spending being Rilm against R6m in the past year, Welkom, with capital spending ahead of R5m against of at \$220; President Steyn which reckons to raise gold output to 27,200 kilograms this year from Herbert and Bunker Runt, to 25,622 kgs in 1977-78 can maintain earnings at a price of above

President Brand needs an average price of about \$210. In this case capital spending in the current year is expected to advance to about R60.5m from R26m, although R48.5m of the latest figure is associated with the OFS joint metallurgical scheme and will be partially financed by consumer loans. Gold has averaged over \$200 since September 30 and is currently

President Brand's subsidiary, Free State Saaiplaas is facing capital spending of R41m in the current year, compared with R10.7m in 1977-78. The latter's inability to meet forecast production levels and to contain costs has strained finances, and further funds will be needed early in 1979. Ways and means of overcoming the cash problem are being examined.

The Anglo-Vaal Loraine gold mine in the OFS had net capital spending of R369,000 in the year to last September, but forecasts a total of some R4m in the current year. However, the chairman holds out the prospect of reversing the past year's fall in mill grade with the mine's plans to increase

debentures. Hunt International said that if Sunshine directors accept the companies will be held in abeyance until the two companies. have reached a point in their merger "where litigation may be dismissed."

PACKER BOOSTS STAKE IN PACIFIC COPPER

The Consolidated Press group, -of Australia's cricket impres-sario. Mr. Kerry Packer-has raised its stake in Pacific Copper of Sydney to 28 per cent from 20 per cent by the purchase of 1m shares from Pacific Copper Mines of Canada for an undisclosed price.

Pacific Copper, which has in-terests in tungsten, coal and the Cadia copper-gold prospect in New South Wales, is an affiliate

of Pacific Copper Mines.
Shareholders of Pacific Copper
were told the news of Mr.
Packer's increased interest at the annual meeting in Sydney by Mr. P. C. Gibb, the chairman. Mr. Gibb also said that the

company was holding discussions with several companies about the re-activation of the Cadia project. Reserves at Cadia have been put at 42.8m tonnes of ore grading 0.72 per cent copper, 0.5 grammes per tonne gold and 5.1

grammes per tonne silver.
Preliminary discussions are
also taking place with an unnamed Australian company for a joint exploration venture in south east Queensland coal. Last year Pacific Copper bought the Barix steaming coal property in combination of Hunt Inter-New South Wales.

1) The results of Airco have been accounted for as follows:

1977/78
(a) For 1977/78, as a subsidiary company. Group sales and trading profit therefore include 100% of Airco for the full year O! the trading profit of the Americas (£49.1 million), £48.7 million relates to Airco.
(b) The Airco adjustment eliminates that part of Airco's trading profit attributable to outside shareholders in the period before Airco became a subsidiary.

1,713.0

6191

(c) For 1976/77, as an associated company. Group results therefore include 34% of the profit before tay of Airco. . 2) Trading profit for the year to 30 September 1978 was depressed by the poor results of the ferro alloys business of Airco, the continuation of production problems in Medishield and a costly strika in the UK Gases Division in October 1977.

During the year sterling strengthened against those currencies important to the Group, particularly against the US dollar. Group profit before tax would have been higher by approximately £5 million if exchange rates ruling at 30 September 1977 had sull applied at 30 September 1978. The Group's policy includes revaluing assets on to a replacement cost basis and charging depreciation on the revalued amounts. cost basis and charging depreciation on the revalued amounts. The practice has been extended progressively to cover further classes of assets (including those of Airco) to that most of the Group's assets are now shown in the Balance Sheet on a revalued basis. The depreciation alising from the revolution of further classes of assets during 1977/78 (including those of Airco revalued at the date it became a subsidiary) tons 15.9 million, which has been charged in arriving at the Group trading proint of \$115.9 million.

£115 8 million E115 8 million
The directors recommend a final dividend of 1 85075p net per 25p ordinary share (1977: 1.785p) making a total cc 3 50075p for the year (1977: 3:135p). This total is equivalent to 5.225p inclusive of tax credit (1977: 4.75p).
Books close for the final dividend and report and accounts to

shareholders 19 February, final dividend payable 5 April, shareholders' meeting 21 March.

Dollar steadies in thin trading

Trading in yesterday's foreign exchange market was not quite touched \$2.0310 very early on, so active as earlier in the week, and despite a slight recovery by the U.S. dollar during the afternoon, it still finished just below \$2.0125, and it closed at \$2.0105. Tuesday's closing levels. Using Morgan Guaranty figures at noon in New York, the dollar's trade weighted average depreciation widened to 9.6 per cent from 9.5 per cent On Bank of England figures, the dollar's index was unchanged at 83.1.

Central bank intervention during the morning prevented the U.S. unit declining further, and with trading thinning out dur-ing the afternoon, the Fed con-

the dollar finishing at around its best level for the day.

Against the D-mark, the U.S. currency dipped to DM 1.8175 at one point, before recovering to DM 1.8410 at the close, slightly below Tuesday's level of DM 1.8420. Similarly the Swiss frame rose to SwFr 1.6200 during the day, before finishing at SwFr 1.64121, compared with SwFr. 1.6420 previously. The Japanese yen showed a slightly weaker tendency at Y194.25 from Y183.20, tendency at Y194.25 from Y193.20, while the French franc strength-ened further to Fr 4.2100 against FrFr 4.3225.

Sterling showed little change overall, and its trade weighted index on Bank of England figures finished unchanged at 63.3, although the morning calculation showed an improvement to 63.5 before easing back to 63.2 at noon. The pound opened at

2.0120, a rise of just 10 points.

FRANKFURT — The dollar was fixed at DM 1.8343 yester day, down from Tuesday's fixing of DM 1.8390, and the Bundes bank bought an estimated \$25.75m in an effort to arres the decline. Trading was initially described as calm and the was the lowest so far this week. The market still appeared to be depressed by the OPEC's decision to raise oil prices by 141 per

NEW YORK—In early trading the dollar showed a slightly firmer trend with U.S. interest rates continuing to firm. The latter reflected the Federal authorities' determination to tighten credit in the domestic money market and Chemical Bank's decision to increase its prime rate to 113 per cent from 113 per cent. The dollar was quoted at \$2.0155 against the pound, unchanged from Tuesday, poind, unchanged from theselay, while the Swiss franc eased slightly to Swir 1.63621 against Swir 1.6355.

PARIS—The dollar continued to decline yesterday, and although some sources suggested that the U.S. unit had bottomed

out, others pointed to the continued switch into gold, which could lead to a further decline in the dollar. The latter was quoted at FFr 4.1750 sgainst FFr 4.21 on Tuesday, having touched FFr 4.1650 in early

TOKYO -Tuesday's close of Y193.35, the dollar fell to Y193.15 with no major news affecting the market other than the latest OPEC oil increases. The U.S. currency opened at Y192.80 and touched Y193.70 during the morning, before selling pressure pushed the rate back to Y192.90. In the afternoon the dollar failed to recover in the absence of my central totalled at \$188m and swap trading

Call money fell to 2.95-3.05 per cent from 3.35-3.45 per cent; while one-month and three-month were unchanged at 4.10-4.20 percent. Skr-month funds rose slightly to 4.15-4.25 per cent; and 12-month money was quoted at 4.25-4.30 per cent, compared with

trend

Steady

GOLD

Gold showed a much steadler trend in yesterday's London bul-lion market, and it closed \$1 an ounce lower at \$2151 \$216. In fairly active trading, the metal opened at \$2191 \$220, which re-presented the day's high, and of \$216.75. The afternoon fixing showed little change at \$216.60, with gold tailing off towards the close in reaction to the dollar's armer trend in late trading.

better terms for borrowers.

THE BOOM times for foreign short-term foreign capital. It ing economic growth and balanc-The finance ministry since

1976 has been placing increas-ingly tight restrictions on the ability of foreign banks to swap foreign currencies into Korean Won (set officially at 484 Won per U.S. dollar) in order to curb the increase of lending and its effect on a ballooning money supply. For the newer banks arriving in 1977 this meant a set ceiling of \$10m each and a limit for the older established banks based on past performance and further cuts for 1978 generation banks. In November, the finance ministry set a swap limit for all banks of Korea, however, restricts the over the next five quarters (from October this year) of only \$6m. Tighter limits have been placed on the amount of rates (now running at 18.5 per foreign currency lending cent for prime borrowers) to related to the promotion of exports the banks can do. They may be raised only if banks are willing to lend to Koreans with-

one of the local banks. Bankers say the new restric- from 21.0 per cent in 1976. This

tions have exhausted some of their capability to lend. They clearly do not like the Government policy of giving all of the foreign banks equal limits, but the finance ministry believes that this will enhance the competition to lend from the more

desirable (for borrowers) and flexible unsecured loan pool. The swap facility last year enabled foreigners to lend a relatively high percentage of loans (38.2 per cent) in Won. There was some misdirected criticism by the local Press that high foreign bank profitability was a result of the favourable swap arrangement. The Bank margin between the interest rate on Eurodollar borrowings and domestic Korean interest about 1 percentage point to 1.5 point by taking what amounts to a commission.

The foreign bank share of the out the luxury of guarantee by foreign currency loans was 66.4

was largely the result of the cut in swap limits which made direct foreign currency lending as profitable as lending the swapped local currency. The foreign bank share of local currency loans was 5.1 per cent, up from 3.7 per cent in 1976.

The future of the foreign banks may appear somewhat uncertain at the moment, particularly for the newer banks which are having to take losses in the process of starting operations under tight money conditions. (As a group, the foreign banks showed a pre-tax net profit last year of about \$22m despite the late arrival losses.)

A foreign bank in Seoul now finds that the costs involved in running the day to day operation of the branch have risen to surprising levels, and may rival those of Tokyo.

Despite the present problems, the banks appear determined to stay. The potential that Korea offers for the future is thought to be better than that of just per cent in 1977, up dramatically about any other place in the

Quebec plays the expropriation card in the Asbestos dispute

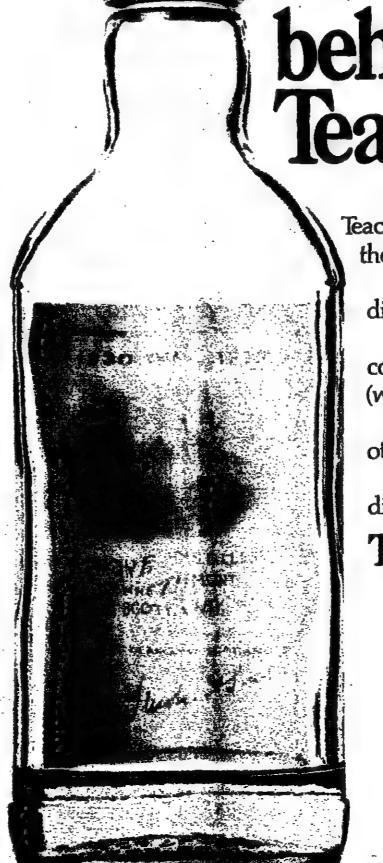

company is asking \$C100 a share. Because the Government regards the gap as "irreconcilable," hurried legislation giving powers of expropriation was tabled. All apposition parties expressed their disagreement. Premier Levesque told the Assembly that if General Dynamics was willing to come down a bit on the asking price.
"so much the better." But if

not, Quebec would become the owner of Asbestos. Industry sources do not believe that Mr. Levesque wants to use expropriation powers unless political circumstances force him to. He needs to maintain good relations with Wall Street, because of his Government's heavy borrowing programme for the James Bay hydro project and the continuing needs of the Province for investment and jobs.

Negotiations with General Dynamics will resume after Christmas. However if agreement cannot be reached, then a three man board would eventually be set up under the Bill to fix a price at which the assets Asbestos would be bought by the Province, General Dynamics would get its share of compensation and so would public shareholders on a per-share basis. The assets consist of large

area, 75 miles north east of Montreal, the most prolific asbestos-bearing region in the West, mining and milling facili-ties, mining rights, plus mining facilities and a mineral lease in the Ungava region of the far North of Quebec. The asbesios mining companies in most cases actually own the land in Quebec, besides holding the mining rights. The Asbestos Corporation also controls a mill at Nor-denham in West Germany. General Dynamics would have

the choice of taking its share of the compensation out of Canada or re-investing it. There are tax advantages to encourage the latter course, and other types of mining or the oil and gas industry would be possible

What goes on behind the Teacher's back?

> The next time you're enjoying a Teacher's, turn the bottle round and look at the back of the label.

There you will see a picture of a malt distillery.

Remember, all blended brands contain grain whiskies and malt whiskies (which cost at least twice as much as grain).

But Teacher's contains more malt than other popular blends.

And that's what gives you the distinctive Teacher's taste, all the way down.

Teacher's. In a class of its own.

Sharp rise in Dean Witter earnings

By Our Financial Staff

A GAIN of just over 50 per cent in net income is reported for the first quarter of this year by Dean Witter Reynolds Organisation, the major securities house. Revenue increased by 115 per cent to \$130.1m in the same period.

The company comments that the figures reflect the acquisition of Reynolds Securities, which took effect on January 8 this year and was accounted for by the purchase method.

IBM pays more

International Machines, the world's leading computer manufacturer, is increasing its quarterly cash dividend by 56 cents to \$3.44 a share and the board has voted to recommend a four-for-one share split. This would involve the issue of ach share held as soon after May 10 as possible.

Bid withdrawn

CENTRAL and Eastern Trust Company has withdrawn its C\$138 bid per share for Credit Foucier Francy-Canadian, the Montreal mortgage company with assets of more than \$Cibn, reports our Montreal correspondent.

Central and Eastern sald it is convinced the Quebec Government would not allow it to acquire coutrol of Credit Foncier.

American Cyanamic

American Cynapid expects 1978 earnings to ton the pre-vious yearly record of 82.24 per share set in 1974, which included a 17 per cent gain from discontinued operations. reports Reuters from Boston. In 1877. Cynamid carned \$2.92. Sales are expected to exceed \$3.7ba, up more than 12 per cent from the last year's \$2.4hn.

EDS steady

Electronic Data Systems expects second quarter carn-inus approximately equal to first quarter net earnings of \$5.5m or 43 cents a share on revenue of \$63.5:n, AP-DJ reports from Dallas. In the second quarter last year the eniopany reported a net of \$1.8m. or 37 cents on revenue of \$49.9m. The second quarter end : December 31.

Carhorundum option

Carborundum Company, the Knanecott Copper unit at the centre of the controversy petween Kennecott Curtiss-Wright, could become independent company again, reports Reuters from New York. Prime Minister Nordli said

the Government has postpone parliament to appropriate NKr 50m (\$10m) to set up a new interim company, which should secure continued opers tion of profitable parts of Tandberg

VAN DOORNE TRANSMISSIE

Bridging the development frontier

AGREEMENT between Fiat, Borg-Warner and the small Dutch company, Van Doorne Transmissie, for the and American companies to take shareholdings in Van Doorne's capital opens up nteresting prospects for its transmatic" gear box.

The financial links with a car manufacturer and with a pro-ducer of automatic transmissions gives Van Doorne substantial commercial support without an injection of new capital and the support that the two companies have promised the "transmatic" might have gone the way of many other good ideas which could not be properly developed or marketed. The tie-up with First and Borg-Warner has also led to the Dutch government promising extra aid.

The Italian car group and the U.S. concern, which manufactures air conditioning and building products, chemicals and plastics, as well as car and truck components, will each put up Fi. 14.4m (\$7.2m) for a 24 per cent shareholding in Van Doorne, whose share capital will be doubled to FI.60m (\$30m). The Van Doorne family interests, represented by the Vado Holding Group, will raise Fi. 1.2m of new capital but will see their stake, in percentage terms, reduced to 391 per cent from the existing 75 per cent

vide about Fl. 40m in the form 25m), a development credit (Fi. 10.4m) and regional development aid. The regional funds are theoretically limited to Fl. 4m but this sum can be increased at the discretion of

the economics minister. For their part Fiat and Borg-Warner are buying, for a fairly modest sum, into a project which could bring major changes in the vehicle transmissions market. The "Transmatic" is still some years away from mass produc-tion but it already has 12 years work behind it. Dutch interests retain a majority stake, however, and the exclusive rights to the know-how and patents are held by Van Doorne.

New partners

cluded, after a thorough investigation, that the "Transmatic " company's managing director. is the furthest developed con- Work on the transmatic tinuously variable transmission began in 1966, reputedly in the in the world. fend off takeover bid

SYDNEY - Persistent speculation that David Jones, the major department store retallers, will receive a takeover bld has prompted the directors to take action to try to retain the support of shareholders. In a special circular to shareholders, Hr. Charles Lloyd Jones, the chairman of the group, said that it was apparent to the board that the concept of a David Jones takeover had been proffered to the company's competitors and to other parties potentially interested in the break up of the group's assets. But, he said that the company had not heen directly approached by any parties in relation to a

Speculation over a bid has increased and Mr. Lloyd Jones told shareholders that it derived from the recent poor trading performance of the group's Australian operations, which had resulted in no dividend growth and a depressed share price. He said the directors were

aware of these problems and were trying to improve the present "very low" return on assets, but it took time on assets, but it took time for improved profitability to become apparent in a group with assets of A\$276m (U.S.\$317m) and a turnover of A\$230m (M.S.\$428) of A\$380m (U.S.\$436m).

Mr. Lloyd Jenes said the board would have a comprehensive revaluation assets carried out in the new year to "Improve shareholder awareness of the real value of their assets." He said it was clear the current asset backing of A\$2.59 a share would be increased after the revaluation.

correctly selling at A\$1.31, which values the company at close to A565m. The current asset backing values the com-pany at about A\$130m,

Japanese Government in higher bond issue plan

Finance Ministry has told a syndicate of underwriters that it plans to issue Y16 trillion (\$82.9bn) of national bonds in fiscal 1979 starting next April. compared with an estimated Y11 trillion in the current fiscal

The Ministry indicated, however, that the plan is tentative and may be changed following discussions between the Japanese Government and the ruling Liberal Democratic party.

The Ministry also told the syndicate that it plans to issue two-year and four-year interestbearing bonds in fiscal 1979 in addition to the 10-year and

bonds and five-year discount bonds it is already issuing. The syndicate was asked by the Ministry to underwrite Y11.50 trillion out of the planned Y16 trillion total. Of the remainder Y1.5 (rillion

will be bought by the Ministry's Trust Fund Bureau, which manages postal savings, with Y3 trillion; tenders

Local banking sources said the Y3 trillion for public tenders will include Y2 trillion of three year bonds and Y500 bn each of two year and four year bonds.

Taiwan SE price ruling

prices will be allowed to go up or down no more than 2.5 per cent in one day, after three days sharp drops in the index totalling 61.65 points.

Norwegian chiorine plant in Dansk-Fransk made a loss of which Borregard has a haif DKr 3.9m (\$780,000) before tax and allocations on a turnover and allocations of the second and allocati The exchange index fell 9.65 points on Friday, to 538.30, after and allocations on a turnover of DKr 441m (\$86.5m) in 1977.

Exchange Commission ordered the price ruling, cutting the permitted variation in half. It was the first such change since June, 1974, when the limit was raised from 1 per cent to 5 per An Exchange spokesman said the limitation was expected

to be temporary. Within the first 15 minutes after the opening, 36 stocks had fallen the full 2.5 per cent, with no takers. By the end of the day. only three stocks out of the 86 listed had risen.

Clal in venture with Shearson

Hayden Stone

TEL AVIV - Clal, Israel's largest investment company yesterday formally announced the establishment of a joint venture with Shearson Hayden Stone of New York, to be known as Shearson Clal. It will be Israel's first specialised professervices which will include foreign securities, options, commodity futures (in particular currencies and precious metals)

and portfolio management. Clal has also become an equal Industries of Haifa and with Control Data Worldtech, Worldtech (Israel) was incorporated a ing development projects and in raising finance for industrial and agricultural projects. In addition, it sells Israeli-devel-oped technologies to companies and organisations abroad. Clai will, in the first instance, invest \$65,000 in the partnership.

Clal Industries, a subsidiary of Clal, expects sales in 1979 to rise to 1£10bn (\$571m) from 1£6bn and 1£3.5bn in 1977. In other words, the growth in sales is expected to exceed the rate of inflation as it did between 1977 and 1978. The 1979 forecast includes anticipated exports worth \$50m.

Companies in the group whose individual sales will exceed l£1bn includes Nesher, producers of cement. The company is planning the estab-lishment of a fourth cement plant. Ourdan, producers of steel products intends to invest If90m in a further expension of

Eastern Asia Navigation up

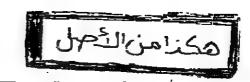

chief publicly-listed arm of Sir Y. K. Pao's World-Wide Shipping group, raised net attributable profits by 8 per cent in the half-year to September 30 to HK\$94.55m (U.S.\$19.7m).

The company's earnings per share rose to 49 cents from 45

It is paying an interim dividend of 20 cents—19 cents last year—and expects the final dividend to be no less than the 30 cents paid last year.

Last year, Eastern Asia turned in a group profit of HK\$174.5m, up nearly 7 per cent, which came as a surprise to some observers who had been expecting the problems of the Japanese ship-ping industry to spill over to the Hong Kong owners of

Price + or Div.Yki.

however, declined 7 cents to A\$3.20.

Hong Kong

Market took a turn for the better, with sentiment partly boosted by higher profits from Wheelock Marden, announced after-hours the previous day. The Hang Seng index picked up 7.32 to 498.79.

Hong Kong Bank rose 40 cents to HK\$17.30, Hong Rong Land 10 cents to HK\$7.70 and Swire Pacific " A " 15 cents to HK\$7.75. Rubber Trust moved ahead 20 cents to HKS4.40 after an assets revaluation.

Cheung Kong advanced 15 cents to HKSS.35 and New World 6 cents to HK\$1.99.

Johannesburg Golds closed in a mixed note

after very quiet trading, with movements generally modest in either direction. . Other Metals and Minerals were equally quiet and little changed while Industrials moved irregularly in thin dealings.

Amsterdam

Bourse prices were generally firmer, with Hoogovens and Royal Dutch gaining Fi 1.30 and FI 1.1 respectively in Dutch-Internationals.

Shippings strengthened, with KNSM rising FI 1.2 to FI 85.50,

Nedlioyd Fl 2.30 to Fl 79.30 and Van Ommeren F1 5.50 to F! 143.50. 143.50. Elsewhere Ahold hardened Fl 2, Elsevier Fl 3.50 and Pak-

hoed Fi 1.20. State Loans were a shade easier where changed. ;

Brussels Higher for choice after

moderate turnover. In Steels, Hainautsanbre advanced 51 to BFr 794, while Non-ferrous Metals had Union Miniere up 14 at BFr 726. In narrowly higher Oils, Petrofina edged up 5 to BFr Chemicals were mixed.

Sharp rise in dairy

PROFITS ON British dairy farms improved sharply last year. A survey of almost 1,000 gressland farms carried out by tie: Milk Marketing Board shows that in the year ended March 1978, average profits were £10,349 compared with £6,283 recorded in the drought-affeited neason of 1976-77.

The Milk Board polated out, houseware that wrofts were still

however, that profits were still not back in real terms to their 1972-73 level, Capital expenses also rose substantially and the return on tenant's capital still averaged only a modest 11.9

The farmers in the survey also boosted their milk yields by an average 133 litries a cow over the year, thanks mainly to better use of grass and improved

The Milk Board said it was concerned at the growing gap between the top and bottom performance herds. The top 25 per ent of herds sampled produced 5,407 litres a cow—1,117 litres more than the bottom 25 per

cent.
The most efficient managed big increases in milk yield while reducing the amount of costly grain and soya fed to their stock. The least efficient managed only modest rises in output for a large increase in the amount of grain fed.

Cut in limit to sperm whale catch agreed

PHE International Whaling Commission has cut the allowin the North Pacific for 1979 by more than 40 per cent to 3.800.

It has also banned the hunting of female whales. The size of the cut, agreed at a special WEDNEDAYS ACTION TORYO YESTERDAY, surprised many observers. But conservaconists were disappointed that an Il.5 per cent by catch of

females was also allowed. Declining pregnancy rates are causing concern in scientific circles hence the ban on the seliberate hunting of females. But catchers claim they cannot always identify the sex of whales before harpooning them.

The female by-catch works out at 437 and once this level is reached all North Pacific sperm whale hunting will have

New wheat pact farm profits talks agreed

GENEVA — A row that halted talks on a new world wheat agreement was settled yesterday, and 70 nations will return to the bargaining table for a three-week session on January 22.

The argument between the U.S. and the EEC was patched up at a 12-man committee of leading exporting and import-ing nations after three days of behind-the-scenes discussion Talks on the agreement broke

up last month after the U.S. and the EEC split over the size of reserve stocks of wheat to be held and the market price level at which countries should start building stocks.

Mr. Arthur Dunkel of Switzerland, the conference chairman, who also chaired the committee, said a compromise between the two sides had been accepted as a basis for resum-

Sources said the compromise provided for half the total reserve stocks established by the agreement to be built up when the market price for wheat was \$140 a tonne.

The Common Market has been demanding a trigger price of \$115 in opposition to calls by the U.S. for a price of \$145.

Pressure for an early resumption of the talks came from both the U.S. and Japan. The U.S. was anxious the agreewas anxious the agreement should be signed in time to be included in world trade negotiations now finishing. Japan was keen to reach early agreement so it could be ratified by Parliament before it recesses next March, sources said.

The Soviet Union stayed away from the committee. Mr. Dunkel said, however, the Russians had warned in advance they would not attend, but stressed the move had no political significance.

An EEC official said the two sides had moved closer to each other on the total size of wheat reserve stocks. While originally the EEC insisted on a maximum global size of 15m tonnes and the US on 30m tonnes, they now The other half would be between 20m and 22m tonnes.

Treasury warned on commodity centre

BY CHRISTOPHER PARKES

THE PRESSURE group lobbying for the establishment of a world commodities centre in London was given a "sympathetic hearing" yesterday by Mr. tions. Denzil Davies, junior Treasury Rei Minister.

Led by Mr. David Knox, MP, the All-Party Group for World Government deputation warned Mr. Davies of the danger of "substantial loss of economic advantage to the UK" if the intergovernmental commo organisations now based in London were to leave this country. A spokesman said the group pressed for a rapid decision from the Government about sup-

port for the proposed centre "in view of the decisions which will be taken within the next three months about the future location of their headquarters by the International Wheat Counthe International Cocos Organisation, an international rubber organisation and the Tea

Profucers Association."

quarters might be moved from London, it is considered timely for plans to be laid for a new centre to house all the organisa-

Renegotiation of the wheat greement, for example, is already well under way. The international Cocoa Agreement will be revamped at a meeting scheduled for January 29 to February 23 next year.

U.S. copper producers lift prices

By Our Commodities Editor DOMESTIC COPPER price increases were announced yesterday by two U.S. pro--Asarco and Newmont

Asarco is raising its price for cathodes by I cent to 72 cents a lb but Newmont announced a 2 cent rise to 73 cents.

Copper prices were steady in quiet conditions on the London Metal Exchange, Further buying, believed to be on bebalf of the Chinese, pushed the market up in the morning. However, "hedge" selling, and a lower than expected opening on the New York market brought an easter tone and eash wirebars closed only £5 up at £774 a

Nevertheless the undertone of the market remains firm by the rise in U.S. prices and the prospect of continued Chinese buying.

Clean sweep of turkeys forecast

By Our Commodities Staff

THE TURKEY industry expects to start 1979 with the lowest stocks in hand for many years, Mr. Raymond Twiddle, president of the British Turkey Federation said yesterday.

Mr. Twiddle said consumers were likely to make virtually a "clean sweep" of supplies available this Christmas and New Year since demand ap-peared to be good and prices had been kept at a very com-

company will retain full owner-

of its shipping, banking

use of subsidies to capture farm export markets from competing Agreement on Tariffs and Trade

TOKYO ROUND TABLE TALKS

The agreement, regarded by the U.S. as a major element of the Tokyo round of international trade talks, has been endorsed by the European Commission but has been sharply criticised by France. The French, whose final agreement will be essential if the

producing countries.

deal is to go through, has attacked the understanding as surrendering the EEC's control over its own Common Agricultural Policy.

The compromise text is intended to contain the Community's answer to accusations from the U.S., Australia and others that the EEC has stolen

GENEVA — Details have now emerged here of proposed new international restrictions on the their export markets by means 1. of excessive subsidies.

The proposed agreement, included in a more general draft code of conduct on subsidies and countervailing duties, is an attempt to clarify the provisions of Article XVI: 3 of the General

> This already prohibits countries subsidising any agricul-tural product so as to gain "more than an equitable share of world export trade in such a product, account being taken of the shares of the signatories in trade in the product concerned during a previous representa-tive period."

The outline arrangement now proposed would include three clauses attempting to spell out what this means in practice.

share of world export trade" shall include any case in which the effect of an export subsidy granted by a signa-tory is to displace the exports of another signatory, bearing in mind the developments on world markets.

With regard to new markets. traditional patterns of supply the product concerned to the world market, region or country, in which the new market is situated shall be taken into account in determining "equitable share of world export trade."

The previous representative period" shall normally be the three most recent calendar years in which normal market conditions existed. A final provision, to which the French particularly object, international trade.

"More than an equitable would oblige signatories "not to grant export subsidies on agricultural exports to a particular market in a manner which results in prices materially below those of other suppliers to the same market." It is pointed out here that "materially below" remains open to interpretation, like other sections of the proposed text. But the suspicion is that the U.S. will try to define the concept more clearly by calling GATT consultations as soon as it identifies a questionable export deal by the EEC. The agreement would cover

all unprocessed farm, forestry and fisheries' products, as well as those that have "undergone the processing customarily required to prepare for market-

EEC monetary changes stalled

Farm exports pact plan

BY MARGARET VAN HATTEM

BRUSSELS-The breakdown in Brussels early yesterday morning of talks on the agricultural implications of the European Monetary System (EMS) leaves open the whole question of monetary compen-satory amounts (MCAs). If the EMS is not introduced

as planned on January 1-and France says it will not take part until all the agricultural problems have been thrashed out-MCAs would continue to be based on the old central rates of the snake currencies. If, as is more likely, the

French drop their reserve and EMS goes ahead, the snake would cease to have any influence on MCAs. The failure of agriculture ministers to approve the use of the new European Currency Unit (ECU) in fixing common prices would leave MCAs without any legal basis.

The EEC Commission, realising this, announced at the end of the Council meeting that it would freeze MCAs on January 1 at the levels fixed between Christmas and the New Year. They will remain frozen until January 15, when agricultural ministers are scheduled to meet again and to take a decision on

In the meantime the Commis-

S.E. ACTIVITY

RISES AND FALLS

YESTERDAY

Festive influences more noticeable in stock markets Hint of tax cuts fails to revive investment enthusiasm

*First Declara- Last Account Dealings tions Dealings Day Dec. 11 Dec. 28 Dec. 29 Jan. 9 Jan. 2 Jan. 11 Jan. 12 Jan. 23 Jan. 15 Jan. 25 Jan. 26 Feb. 6

Seasonal influences were prominent in stock markets yesterday and the number of bargains marked, not the best but the only immediate measure of business activity, just exceeded 3,000 which is about 1,200 down on the recent daily average. The Chancellor's hint of income tax cuts in the spring providing there is no wage explosion in the meantime was ignored by investors who preferred to await some clarification of the pay and economic 12Sp compared with the offer for

A leading jobber marked quotations for leading industrials higher at the outset in anticyation that buyers would be drawn by the hope of tax reductions, but the manoeuvre attracted only a certain amount of book-soupring and generated little genuine investment interest. Also inhibit-ing trade was the growing impression that increased U.S. Prime Rates would soon be announced: later in the afternoon, this expectation was confirmed.

F.T. Industrial Ordinary share index initially extended Tuesday's modest rally and was 2.8 up at 11 am, but at each subsequent calculation the rise was trimmed until the final count which was 2.1 higher on the day at 478.2. Enthusiasm for speculative or situation stocks was very sporadic but trading announcements occasionally relieved the

drah conditions.

A slightly easier tendency in British Funds was not influenced by the expected confirmation of another round of small increases in U.S. interest rates. In fact, the shorter maturities were hardening after the official close of husiness on occasional afterthe event bear closing. Once again, the two Variable coupon shorts moved against the general trend, finding small fresh support and rising vi apiece. At the longer end of the market, business was confined to portfollo switching for tax reasons, being little straight

Renewed institutional demand

ment's clarification on Monday of the UK-Irish exchange control position saw the premium improve further to 811 per cent before closing 1 better on balance at 80% per cent. Yesterday's SE conversion factor was

0.7144 (0.7220). Only 257 contracts were transacted in the Traded Options mar-ket yesterday, the lowest total since November 20. A modest interest was sen in ICI and Commercial Union which provided 60 and 55 respectively of the total deals.

Milletts Leisure Shops, which staged a successful debut last week, pushed up another 3 to sale price of 110p.

Standard Chartered up

Following news that the Director General of Fair Trading has finally issued instructions for the issue of licences under the consumer credit act to Julian S. Hodge and Co. Ltd and Hodge Finance Ltd, subsidiaries of Standard Chartered, the latter's shares moved up 6 to 438p. Still in the wake of the Government's decision not to impose exchange controls on Irish capital transactions for the time being, Bank of Ireland firmed 10 afresh Overseas issues continued to make progress on domestic and investment currency influences. ANZ gained 8 more to 320p and Bank of New South Wales 5 to 275p, while Hong Kong and Shanghal appreciated 10 to 250p. Home Banks closed mixed after a thin

Insurances frequently hardened a few pence although Sun Alliance at 510p, recorded an above-average improvement of C. E. Heath closed 4 to the good at 240p; approval has been given for the group's acquisition of 80 per cent of the share capital of Group Spinks S.A. Breweries, Scottish and Newcastie disappointed with reduced first-half profits and fell 2 to 61p after 60 p. In Dis-tilleries, Matthew Clark again reacted to fading bid speculation and fell to 142p before closing 5 off on balance at 144p. Leading Building descriptions generated little genuine business and for the most part held at overnight levels although Blue firmer. Occasional support was

Johnson-Richards Tiles found a little support and improved 3 to 104p. Fresh speculative interest on suggestions that T. W. Ward may part with its 26.6 per cent stake lifted **Tunnel** "B" to 325p at one stage, but the shares reverted to unchanged at 3240. In Contracting and Constructions, Norwest Holst continued firmly by adding 3 to 108p. but George Wimpey eased a penny to 78p following Press reports that a broker's adverse circular is on the way. A Monk shed 2 to 83p for a three-day fall of 14 since the chairman's bearish statement about the full-

ICI edged forward to 365p initially, but lack of follow-through support left the close a penny cheaper on balance at 363p. Fisons held a modest improvement at 304p, but Allied Colloids, at 71p, gave back nearly all of the previous day's late rise of 2. Occasional interest left Yorkshire Chemical a couple of pence to the good at 82p.

Price movements worthy note were hard to find lethargic Stores. Gussies A. hardened 2 to 312p among the leaders but Mothercare reacted that much to 144p. Elsewhere, Executex edged forward 2 to 42p in a thin market but Church lost 4 at 165p.

AB electronic feature Encouraged by the good pre-liminary results from Granada

buyers showed interest in Thorn Electrical which pushed ahead to 368p before settling at 365p for a rise of 5 on the day. Elsewhere in the Electrical leaders. GEC edged up 2 to 329p, while Plessey fluctuated narrowly and closed without alteration at 109p News of the proposal by CTS Corporation of America to increase its holding in AB Electranic from 10.5 per cent to just over 20 per cent prompted a gain of 9 to 164p in the latter. Other Electronic issues tended firmer in sympathy, gains of around 5 being recorded in Electrocom-ponents, 335p, Farnell, 390p, and Racal, 344p. Elsewhere, Petbow firmed 2 to 82p in the late dealings following the half-yearly statement.

Despite a paucity of business, the Engineering leaders tended

Circle moved up 5 to 265p and forthcoming for Tubes, up 5 at London Brick put on a penny to 381p, while GKN and Hawker Siddeley edged up 2 apiece to Main Newspaper issues tended 257p and 226p respectively. Elsewhere, Edbro featured at 201p,

down 23p, following the com-pany's warning of severe pressure on margins in the second-half of the year which accompanied the interim results. On the other hand, Record Ridgway at 56p, regained 4 of the previous day's fall of 20p which followed news of the slump in annual profits and the omission of a final dividend. Fresh scattered demand lifted Charles Clifford 4 further to 118p, while Jones Shipman were firm at 158p, up 5, along with Stone-Platt, 3 dearer at 112p. Northern Engineering hardened 2 to 125p after news of the joint nuclear venture with Rolls-Royce and Combustion Engineering of the U.S., while Averys improved 4 to 235p awaiting further news of the possible bid from GEC. Leading Foods held steady to

United Biscuits gained 21p to 811p and Associated Biscuits a penny to 72p, while Avana, sup-ported by the Board's confident statement on current trading, put on 11 to a high for the year of Still impressed by the annual results, buyers came in for Carr's Milling which put on 2 to a 1978 peak of 68p, but Louis C. Edwards, at 24p, gave back 2 of the recent speculative advance that stemmed from the Gulliver Foods share and management deal, Culiens ended 2 cheaper at 124p on lack of support, but Hillards reverted to un-

changed at 224p after 221p.
In Hotels and Caterers, Lad-broke added 3 to 182p following

firm in a particularly slack trade.

a Press mention.

BOC steady Miscellaneous Industrial leaders plotted an irregular course. Rank Organisation fared best with an improvement of 6 at 246p, while Reed Inter-national put on 3 to 148p as did Pilkington, to 300p, BOC Inter-national hold the experient level national held the overnight level of 661p throughout the day despite recording annual profits around £21m below general expectations. Elsewhere, a sharp increase in first-half earnings prompted a rise of 4 to 80p in Philip Harris, while Sotheby's rose 6 to 336p on further consideration of the preliminary results and Christies International advanced 5 to 151p in sympathy. Toye found support at 78p. up 4, while improvements of 5 were seen in Amaigamated

Metal, 280p, IC Gas, 363p, and Leadenhall Sterling. Renewed investment demand left Vinten 4 dearer at 145p.

to supply mining equipment to

slightly firmer in a lack-lustre business. News International rose 3 to 273p, while Associated, 243p and Daily Mail "A", 358p, hardened a penny apiece. Elsewhere renewed hopes of a bid, possibly from America, left Mills and Allen 4 better at 232p. Properties adopted a quietly firm stance with scattered improvements throughout the sector. Capital and Counties edged forward 1 to a high for the year of 661p and British Land added a like amount to 421p. Further consideration of the

recent U.S. property sale left Centrovincial 2 higher at 94p for a gain of 8 since the announcement. Support was forthcoming for Peachey which put on 2 to 92p and Clarke Nickells, a similar amount to the good at 71p, while occasional interest was shown in Estates and General Investments which added a penny to 211p. By way of a contrast, Berkeley Hambro lacked support and eased 2 to 148p.

Oils inclined harder Quiet conditions persisted in the Oil market, but the trend was towards slightly higher levels. British Petroleum finished 4 firmer at 924p, while Shell hardened a shade to 578p. Royal Dutch, up i at £411, reflected currency and dollar premium influences. Among the more speculative issues, Siebens (UK) traded firmly at 270p, up along with Ultramar, a like

amount higher at 226p. Trusts made a mixed showing. Clydesdale firmed 3 to 73p and Scottish Western B 2 to 87p, but Capital issues sometimes eased a few pence.

Textiles again met with scant enthusiasm, although the odd

FT-Actuaries

For the record, our issue of December 9 should have shown the Life Insurance sub-sector index for December 8 as down 0.7 per cent at 139.40 and not up 1.0 per cent at 141.80. The error makes it necessary also to adjust the December 9 figures for the Financial Group. 171.64 (not 171.94), and the All-Share index, 227.75 (not 227.82).

Tobaccos ended firmly with

Bats 3 better at 286p and Imps a penny to the good at 85p.

Golds firmer again

Registering satisfaction with the outcome of Tuesday's big U.S. Treasury gold auction, South African Golds made headway for the third successive day although trading was much smaller than on the previous day. The bullion price was finally I down at \$215; per ounce.

The Gold Mines index rose 12

more to 141.4 its highest level since the end of October, while the ex-premium index eased 0.2 to 101.0.

bright start reflecting a good overnight American demand following the favourable auction result. However, prices tended to ease a fraction during the day as interest petered out. Nevertheless, there was still a firm undertone to the market and prices were bolstered by a rise in the investment currence

Among the heavyweights.
Randfontein added a half-point at £28, while West Driefontein put on \$ to £22\$ and Free State Geduld \$ to £13\$. In the cheaperpriced stocks, Libanon were prominent and finally 11 better

The firmness of Golds prompted renewed buying of South African Financials. Rises of 4 were common to De Beers, 3 UC Investments, 210p and Union Corporation 250p. General Mis-ing continued to attract buying from Johannesburg and closed another 10 up at 355p.

Australians put on snother good performance reflecting the strength of overnight domestic markets and the higher premium. Interest mainly centred on the high quality stocks like Consine Riotinto, which advanced 6 to 274p and MIM Holdings, which added 5 to 193p. Pacific Copper were unaltered at 60p following news that Consolidated Press has increased its stake in the former to 28 per cent

A chance to explore the best source of news from the North Sea

In a little more than seven years the North Sea oil industry has grown enormously, both in offshore exploration and production, and in ancillary onshore developments.

It is an industry that lives with fast-moving expansion, politics and projects which stretch modern technology to its limits. Decisions involving millions of pounds arise almost every day and call for constant access to a wide range of up-to-date, accurate information.

This is what the North Sea Letter & European Offshore News (NSL) provides. Produced by the Financial Times Limited, NSL is an exclusive weekly review of oil and gas

activities on all sectors of North-West Europe's continental shelf. Every week NSL gathers all the relevant information, interprets it, sets it in perspective, and provides a continuous

well-referenced record. This is compressed into a concise dozen or more pages that are essential reading for anyone involved in this dynamic industry.

All for around £3 a week. So why not try tha four-month test. Complete and return the coupon below and begin a four-month subscription, now.

Exploring for accurate information is rather like exploring for oil: painstaking, expensive work. This time, we think you'll find you've struck it rich.

BY SUE CAMERON

THE GOVERNMENT has given

British Petroleum the go-ahead

to start developing the Magnus

field—the deepest yet drilled in the North Sea.

Approval for the development of the Magnus field has been held up by discussions over its

gas reserves. At one point there were suggestions that BP might

want to flare the gas, but last

week the company denied this

and explained that the debate

was simply over how the gas

A decision has now been reached to try to link a gas-

gathering system on the Magnus

field with the Shell/Esso Brent gas pipeline. The Department of

Energy yesterday admitted that

this could present technical diffi-

culties, but it stressed that the

collection of gas from Magnus

had been a "major factor" in considering BP's plans for developing the field.

BP has undertaken to make

the gas available at the foot of

the Magnus platform, and the

British National Oil Corporation and the British Gas Cor-

poration are ready to co-operate

in financing a gas-gathering

system. The intention is that

the system will deliver gas from Magnus and other nearby fields

the delay.

Egypt and Israel

unexpected meeting,

Little pressure for big wage rises, says CBI BY JOHN ELLIOTT, INDUSTRIAL EDITOR

last night that there is no evidence of widespread pressure in the private sector for basic pay rises much in excess of 5 per cent, in spite of Ford Motor's 17 per cent settlement and the Government's decision to end sanctions.

Today the Confederation of British Industry will meet the Prime Minister to discuss pay issues and argue that this pattern should not be endangered by high wage offers

in the public sector.

It is likely to agree to have monthly meetings with the Government to review the impact of wage and price rises on the economy, in parallel with the meetings agreed by the TUC for the same purpose two days

But it will strongly oppose any extension of price controls, following the Treasury confirming last night that all pay sanctions are to cease. It is also likely to cast doubt

on the value of the suggestion made on Tuesday night, by Mr. Denis Healey, Chancellor of the Exchequer, that he might intro-

wage explosion this winter. Yesterday the Confederation sent the Prime Minister and Mr. October pay statistics. Healey a memorandum on public spending which warns "contractionary Budget" may be needed. "Excessive pay claims currently threaten both to lead to accelerating inflation and to limit the scope in the Budget for reducing income tax," says the memorandum.

Last night, however, after its monthly council meeting, the Confederation's leaders were more interested in stressing the relatively low levels of recent wage settlements than in boosting pay expectations by dwelling on the higher levels of claims, many of which are running at 20 to 30 per cent.

LEADING industrialists claimed Confederation's pay data bank shows that 90 per cent of 1m teople who have settled so far this winter have been broadly within the Government's pay guidelines.

However, this figure drops to just under 80 per cent if those who have received rises of more than 5 per cent under exemptions for low-paid workers are excluded. It also does not take account of productivity rises which have been recorded for some 200,000 workers, which add about 3 or 4 per cent or more to some deals.

Chance

But the most significant point to emerge was that the 280 in-dustrialists and representatives of employers' federations at yesterday's council meeting did not sound any alarms about the risk of workers wanting existing deals re-opened and high claims met. Sir John said there was "no intention of any pressure to re-open" in the meet-

This means the Confederation still believes there is a chance of this year's pay round producing an eventual national earnduce income tax cuts in his ings increase of about 10 per spring Budget if there is no cent compared with the 14.6 per cent for the last pay round shown in the Government's

> The formal announcement of the ending of pay sanctions in last night's Treasury statement indicated that the Government has abandoned all aspects of the sanctions system. Clauses inserted in public sector conindustrial assistance offer letters, and other official documents "will not be acted on" said the statement. Such clauses would "not be in-serted" in the future.

Prime rates

tighten credit since it can argue that the risk of inducing a reession are lower.

The surprising strength of the economy will undoubtedly add to Wall Street's anxieties about also rising again, partly under the underlying rate of inflation, the influence of the Federal fears which have been fanned Reserve's open market interby the OPEC oil price increase and by admissions from Administration officials that infla-

sumer price index to rise by corp paid more than 11 per cent more than 7 per cent next year. for funds at its weekly sale of Previously the Administration commercial paper.

readily justify moves to force had been forecasting a 1979 inup interest rates and try to flation rate of 6 to 6.5 per cent. Wall Street is already reappraising its inflation fore-casts and long term bond prices have been under heavy pressure

Short term money rates are Reserve's open market inter-vention but also because of strong credit demands.

Some banks are said to have tion will be worse next year than they expected.

Mr. Blumenthal said yester-day that he expected the conday that THE LEX COLUMN

Hopes deferred at S & N Breweries

If the financial markets had really believed in the Chancel Index rose 2.1 to 478.2 lor's hints of tax cuts they would have turned sharply weaker. vesterday. But the City does not believe there can be any genuine fiscal relaxation in the spring Budget, and the stock market made little response one way or the other, with the earnings figures adding little to pre-vious knowledge about wage trends. The chief stock market feature, indeed, was the lack of activity, with only just over 3,000 bargains marked.

S and N -

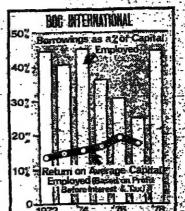

There are no mitigating circumstances this time for Scot-tish and Newcastle Breweries. It was not can shortages or industrial disputes that caused the fall in half time profits. The cause lay in S and N's well-established problems—too little lager, tough competition in the free trade, and a relatively small involvement in faster growing activities like the wines and spirits trade.

S and N is heading for a third. year of decline in the volume of wholesale beer sales which account for 65 per cent of its profit. The newly restructured management knows that this situation will take time to turn round. Meanwhile the company faces the increased financing costs on the investment-£45m in the current year-needed to achieve this. It was a deterioration on financial items of £1.2m in the first half that turned a slim gain in operating profit into a decline at the pre-tax level from £22m to £21.6m for the first six months.

With no increase in S and N's beer prices likely until close to the end of the company's year it is up to the other businesses. to prevent a decline in full year profits. Pubs. of which S and N. rate field, edging up to 114 per-has relatively few, and which contributed one fifth of last all-time record peak of 12 per-year's profits, are expected to do cent bit in 1974. With U.S. year's profits, are expected to do slightly better. A more emphatic gain will come in the emphatic gain will come in the the dollar continuing sinder Hotels and Wines and Spirits activities which together make about 15 per cent of group profits. The contribution from S and N's share in Haro Lagar in favour of pay deal remains static, relition impression that this joint venture is becoming incompatible with its owners' own aspirations in the lager market.

in the lager market.

The half-time message from pects for money rates in the ling the shares, which yield 7.8 S and N seems to be that those who regard this company as a debate about how closely bally of another rights issue.

recovery stock are going to have recovery stock are going to have their patience tested. In the meantime S and N will probably raise the dividend by 16 per cent to preserve the income attraction of the shares. At last night's price of 61p the shares prospectively yield 9.2 per cent which remains well above the which remains well above the sectoral average of 6.5 per cent.

Money rates

Where do interest rates go now? A few weeks ago, when UK Money market rates were easing back a trifle, it looked as though Minimum Lending Rate had, if anything been pushed too high. But now the renewedfirmness of U.S. interest rate is again casting a shadow over Lombard Street. Yesterday the federal funds rate was nudging the psychological level of 10 per cent, although it was not clear just how far the Federal Reserve. had raised its target rate. Chemical Bank led the prime

London rates need follow the New York trend. In theory, with sterling at present enloying a relatively stable float, there might seem no great reason for upward pressure. But in the next few menths sterling will be occupying a notentially sensitive position relative to the newly established EMS block.

BOC International

BOC International seacquisi-BUE Interdational secquisition of Airco earlier this year has changed the profile of the group. So, fundamentally that too much weight should not be put on the performance over the past counte of augreters. It will be some years before Airco is fully integrated into BOC and can show its true paces until their judgment shout the success of the move will have to be reserved. In the short term the most

visible impact of the Airco acquisition is on turnover up from 1670m to 11.200 and on the balance sheet where capital emptoyed has short up from 1619m to 11.113m and net borrowings have jumped from 11.113m by contrast the profit outturn looks far more pedestrian. After debit-ing f184m for Airca's profit attributable to outside shareholders, BOC's pre-tax profits in 1977/78, are £15.7m lower at

At the operating level the performance tooks a little more impressive with profits, swelled by the consolidation of Airco. rising by £52m to £177m Row-ever, knock off £28.7m of extra depreciation, an additional £11.3m of interest and a £19.4m reduction in the contribution from associated companies and from associated companies and there is not much growth left. Admittedly pre-tax profits would have been closer to the previous years 1822m if the European business had not suffered at laif of more than a third in its profits.

There is please of recovery potential on this side of the business which should boost profits in the current year and the schanges, the fear is that losses on Airco's important rime rates will climb into new ferro alloys business should go ground within the next size disappear Against this, the wweeks.

Sympathetically, there was a last year's 231m, to closer to slight easing of gift-edged prices 450m and group pre-tax profits in London yesterday. Yet the are unlikely to clims above discount market appears to be 480m. In the about term, how-
